

For Supplier Address See PHOTOFAC Index

FOLDER 2

**CABINET-REAR VIEW****DISASSEMBLY INSTRUCTIONS****CHASSIS REMOVAL**

Remove five screws holding cabinet back and remove back. Disconnect HV anode, CRT socket, deflection yoke connectors, degaussing coil connectors, speaker connectors, ground leads, and all other required cabling. Remove the Strain relief (AC cord) assembly and release two latches holding main board assembly to cabinet bottom and slide board assembly from cabinet.

CRT REMOVAL

(Caution: Some sets employ a CRT with neck assemblies permanently bonded to CRT. Do Not attempt to remove these assemblies.)

Follow "Chassis Removal" procedure and lay set face down on a soft protective surface. Loosen and remove CRT neck assemblies. (See Caution.) Remove four screws holding CRT to cabinet front and lift CRT out of cabinet.

DO NOT LIFT CRT BY THE NECK**SERVICING IN THE FIELD****CRT IMPLOSION PROTECTION AND CLEANING**

Implosion protection is an integral part of the picture tube, cleaning accomplished without CRT removal.

remote transmitter) provided for two digit entry direct access channel selection. Fine tuning is automatic.

HIGH VOLTAGE

For High Voltage procedure, refer to Miscellaneous Adjustments.

FOCUS

The focus may be adjusted by the Focus control. (See photo, Cabinet - Rear View.)

AGC

The RF AGC may be varied by an RF AGC control. (See photo, Chassis - Top View.)

A 4.0-amp fuse is used for AC line protection. (See photo, Cabinet - Rear View.)

VHF/UHF TUNER

See Miscellaneous Adjustments.

CHANNEL TUNING

Channel Up and Down buttons are provided for channel scanning with ten numbered buttons (on

SET 2749 FOLDER 2

SAFETY PRECAUTIONS

SERVICE WARNING

Service work should be performed only by qualified service technicians who are familiar with safety checks and guidelines.

1. For continued safety, no modification of any circuit should be attempted unless recommended by manufacturer.
2. Disconnect power source before replacing parts as some parts may be electrostatic sensitive.
3. Use an isolation transformer between the line cord and power receptacle, when servicing chassis.

SERVICING HIGH VOLTAGE AND PICTURE TUBE

When servicing the High Voltage circuits, extreme caution should be used.

1. Discharge static High Voltage by connecting a 10 kohms resistor in series with a test lead between chassis and anode lead of picture tube.
2. Wear shatter-proof eye protection (goggles) when handling the picture tube in case of implosion.
3. DO NOT lift picture tube by the neck.

X-RAY RADIATION AND HIGH VOLTAGE LIMITS

Service personnel should be aware of the procedures and instructions covering x-ray radiation. The only potential source of x-ray in present day solid state receivers and monitors is the picture tube.

1. It is only when High Voltage is excessive that x-ray radiation is capable of being emitted from shell of picture tube. Be sure the High Voltage is set at specified level.
2. An accurate High Voltage meter should be available at all times. Meter calibration should be checked periodically.
3. High Voltage should be kept at rated value - NO HIGHER. Higher voltages may cause x-ray radiation or failure of other associated components. DO NOT depend on protection circuit to keep voltages at rated value.
4. Every time a chassis is serviced, High Voltage should be checked at various brightness levels to be sure it is regulating properly.
5. While troubleshooting a set with excessive High Voltage, avoid being close to picture tube. DO NOT operate longer than it is necessary to locate the cause of excessive High Voltage. Use a variable AC transformer to regulate voltage.

6. Many components, electrical and mechanical, in present chassis have safety related characteristics which are not evident with visual inspection. When these components are known, they are identified with a # on the schematic and in the parts list. When replacing these components, for SAFETY, use only an equivalent replacement part.

SAFETY CHECKS-FIRE AND SHOCK HAZARD

Cold Leakage Checks (Sets with isolated ground.)

1. Unplug the AC cord and connect a jumper across the two prongs on the plug.
2. Turn on power switch.
3. Measure the resistance, with an Ohm meter, between the jumpered AC plug and any exposed metal cabinet parts on the set such as: antenna screw heads, control shafts, handle brackets. Exposed metal parts that have a return path should measure between 200 kohms and 5 megohm. Parts without a return path must measure infinity.

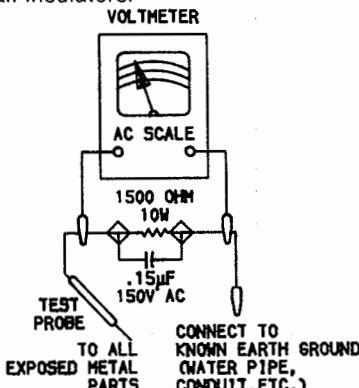

Leakage Current Hot Check

1. Plug the AC cord directly into AC outlet. DO NOT use an isolation transformer.
2. Connect a 1500 Ohm 10 watt resistor, in parallel with a .15μF 150V AC capacitor, between any exposed metal parts on the set and a good earth ground such as a water pipe. (See Figure below.)
3. Using an AC volt meter, with 1000 Ohms per volt or more sensitivity, measure the voltage across the resistor. Check each exposed part and measure voltage at each point.
4. Reverse the AC plug and repeat voltage measurement at each point.
5. The voltage at any point should not exceed .75 volts RMS. This corresponds to .5 millamps AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected.

GENERAL GUIDE LINES

A final SAFETY check before returning the set to customer.

1. Check area repaired for poorly soldered or de-soldered connections. Check entire circuit board surface for solder splashes.
2. Check interboard wiring for pinched wires or wires contacting any high-wattage resistors.
3. Check that all control knobs, shields, covers, grounds and mounting hardware have been replaced. Be sure to replace all insulators.

TROUBLESHOOTING AID

Waveforms taken with triggered scope, Keyed-Rainbow generator. Schematic voltages measured with digital meter, no signal. Controls adjusted for normal operation.

PICTURE OR SOUND

NO PIC, NO SOUND, NO RASTER: Check AC power supply and sources generated from Horizontal Output Transformer (T4402). Refer to "Troubleshooting" Power Supply and Horizontal circuits.

NO PIC, NO SOUND, HAS RASTER: Check IF-AGC and source voltages from Horizontal Output Transformer (T4402). Refer to "Troubleshooting" IF-AGC and Horizontal circuits.

NO PIC, HAS SOUND, NO RASTER: Check Horizontal Output Transformer (T4402) sources and Video circuit. Refer to "Troubleshooting" Horizontal and Video circuits.

HAS PIC, NO SOUND: Refer to "Troubleshooting" Audio circuit.

OVERLOADED PICTURE: Refer to "Troubleshooting" IF-AGC circuit.

LOW OR EXCESSIVE BRIGHTNESS: Check Video and Luminance circuits. Refer to "Troubleshooting" Video circuit.

SWEEP

NO RASTER, HAS SOUND: Check HV rectifier, Part of Horizontal Output Transformer (T4402). Refer to "Troubleshooting" Horizontal circuit.

NO RASTER, NO SOUND: Refer to "Troubleshooting" Horizontal circuit.

NO VERT DEFLECTION: Refer to "Troubleshooting" Vertical circuit.

POOR VERT LIN OR FOLDOVER: Refer to "Troubleshooting" Vertical circuit.

POOR HORIZ LIN OR FOLDOVER: Refer to "Troubleshooting" Horizontal circuit.

NARROW PICTURE: Refer to "Troubleshooting" Horizontal circuit.

VERT OFF FREQUENCY: Refer to "Troubleshooting" Vertical circuit.

HORIZ OFF FREQUENCY: Refer to "Troubleshooting" Horizontal circuit.

NO VERT/HORIZ SYNC: Refer to "Troubleshooting" Sync circuit.

RASTER

YELLOW (NO BLUE): Check Chroma and Blue Output circuits. Refer to "Troubleshooting" Raster circuit.

CYAN (NO RED): Check Chroma and Red Output circuits. Refer to "Troubleshooting" Raster circuit.

MAGENTA (NO GREEN): Check Chroma and Green Output circuits. Refer to "Troubleshooting" Raster circuit.

COLOR (B/W operating normally)

NO COLOR: Refer to "Troubleshooting" Chroma circuit.

WEAK COLOR: Refer to "Troubleshooting" Chroma circuit.

NO COLOR SYNC: Refer to "Troubleshooting" Chroma circuit.

NO GREEN: Check Chroma and Green Output circuits. Refer to "Troubleshooting" Raster circuit.

NO BLUE: Check Chroma and Blue Output circuits. Refer to "Troubleshooting" Raster circuit.

NO RED: Check Chroma and Red Output circuits. Refer to "Troubleshooting" Raster circuit.

INCORRECT HUE (TINT): Refer to "Troubleshooting" Chroma circuit.

TEST EQUIPMENT

Test Equipment listed by Manufacturer illustrates typical or equivalent equipment used by SAMS' Engineers to obtain measurements and is compatible with most types used by field service technicians.

Equipment	B&K Precision Equipment No.	Sencore Equipment No.	Notes
OSCILLOSCOPE	1541A, 2120, 2125, 2160	SC61

TRANSISTOR TESTER		TF46	
VIDEO ANALYZER		VA62A	

TV ALIGNMENT INSTRUCTIONS

Use an isolation transformer, or observe polarity, and maintain line voltage at 120VAC.
Allow a 20 minute warm-up period for receiver and test equipment.

Suggested Alignment tools: GC-THORSEN

Alignment COILS:
L2302

RECOMMENDED TOOLS:
9440

PRELIMINARY INSTRUCTIONS

Select highest unused channel. Set scope sweep to external or vector mode. Connect scope vertical input to scope vertical input on sweep/marker generator. Connect scope external horizontal input to scope horizontal input on sweep/marker generator. Ground test equipment to tv chassis unless specified otherwise. Use only enough generator output to provide a useable indication. Sweep Generator frequency is 44MHz with 10MHz Sweep.

NOTE: Response may vary from that shown.

Connect a 5.5V - 6.0V Bias to TP2305.

L2302 is factory set. Do not adjust.

VIDEO IF ALIGNMENT (SWEEP MARKER GENERATOR)

DIRECT PROBE FROM SWEEP GENERATOR	SWEEP GENERATOR OUTPUT	MARKER GENERATOR FREQUENCY	REMARKS
TP2307	TP1221	45.75MHz	Adjust L2304 for best overall symmetry and position of marker as shown. See Figure 1

TV ALIGNMENT INSTRUCTIONS (CONTINUED)
VIDEO IF ALIGNMENT (BAR SWEEP GENERATOR)

BAR SWEEP GENERATOR	SCOPE INPUT	REMARKS
Antenna Terminal	TP1221	Perform in same manner as Video IF Alignment Sweep Generator Instructions above. See Figure 2

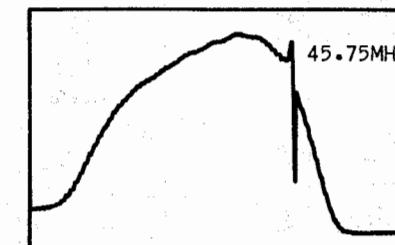

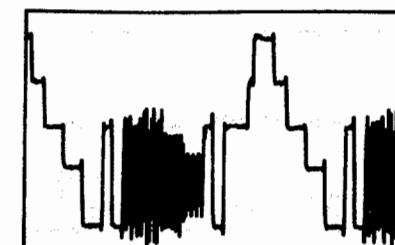

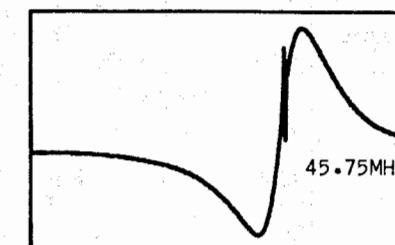

SOUND IF ALIGNMENT

Tune in a station and adjust L1201 for maximum sound. Reduce signal strength at the antenna terminals until distortion appears. Continue to reduce the signal while aligning for undistorted output by adjusting L1201.

AUTOMATIC FINE TUNING ALIGNMENT

Connect as explained in preliminary instructions unless specified otherwise.
Connect a 6.0V Bias to TP2305.
Set AFT R2323 fully clockwise, perform instructions below and adjust R2323 for 3.0VDC at TP2342 after L2303 has been adjusted.

DIRECT PROBE FROM SWEEP GENERATOR	SWEEP GENERATOR OUTPUT	MARKER GENERATOR FREQUENCY	REMARKS
TP2342	TP1221	45.75MHz	Adjust L2303 to place 45.75MHz marker at crossover. See Figure 3

TROUBLESHOOTING

POWER SUPPLY

Check AC Fuse (F4101) and DC Fuse (F4102). If Fuse F4101 is open, check Bridge Rectifier Diodes (CR4101 thru CR4104) Capacitors C4102 thru C4105 and Electrolytic C4106. If Fuse F4102 is open, check 140V Regulator (Q4102) and Horizontal Output Transistor (Q4402). Apply 120V AC and check for 160V at the cathode of CR4103. If 160V is missing at the cathode of CR4103, check Line Filter (L4101) and Resistor (R4101). If 160V is present at the cathode of CR4103, check for 140V at TP4110. If this voltage is missing, check voltages and components associated with Q4102 and the Horizontal Output Transistor (Q4402). If the proper voltage is present at TP4110, refer to the "Horizontal" section of this Troubleshooting guide. If the voltage at TP4110 is 160V and there is a ticking sound, the set may be in shutdown. Refer to the "High Voltage Shutdown" section of this Troubleshooting guide.

AUDIO

Select an active TV channel and check for an audio waveform at pin 28 of the IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001). If there is no audio, check the voltages, waveforms and components associated with pins 28 thru 40 of U1001. If audio is present at pin 28, check for the audio at Speaker (SP1). If audio is missing, check the voltages, waveforms and components associated with Audio Amp Transistor Q1201 and the Audio Output Transistors (Q1202, Q1203).

VIDEO

Inject a video signal at TP07 and check for video on the CRT. If video is present, refer to the "IF-AGC" section of this Troubleshooting guide. If there is no video on the CRT, check for a video waveform at pin 53 of the IF/Chroma/Luma Process/Deflection (U1001). If video is missing at pin 53 of U1001, check the voltages, waveforms and components associated with pin 53. If video is present at pin 53 of U1001, check for a video waveform at pin 13 of U1001. If the waveform is missing, check the voltages, waveforms and components associated with pins 8, 13 thru 18, 51, 52, 53 of U1001. If the waveform is present at pin 13, check the voltages, waveforms and components associated with Output Transistors (Q5001, 5003) and the Luminance Buffer Transistor (Q2901). If the brightness is inadequate or cannot be con-

trolled, check the voltages, waveforms and components associated with pin 17 of U1001.

IF-AGC

Inject a video IF signal at the IF input and check for video on the CRT. If video is present, check Tuner, Tuner Control and Tuner AFC circuits. If there is no video on the CRT, check for a video waveform at TP2307. If video is present at TP2307, refer to the "Video" section of this Troubleshooting guide. If there is no video at TP2307, apply AGC bias to pin 202 of the IF/Chroma/Luma Process/Deflection (U1001). If video is now present at TP2307, check the voltages, waveforms and components associated with pins 18, 22 and 46 of U1001. If there is still no video at TP2307, check the voltages, waveforms and components associated with pins 18 thru 24, 42 thru 47 of U1001. If Transistor (Q2302) and the Video Amp Transistor (Q2302). A defective AGC circuit can cause an overloaded picture, excessive snow or loss of audio and video. See the AGC Voltage Chart for AGC voltages with signal.

AGC VOLTAGE CHART U1001

Pin 18	2.0V
Pin 22	5.2V
Pin 46	6.2V

CHROMA

Check for a chroma waveform at pin 49 of the IF/Chroma/Luma Process/Deflection (U1001). If the waveform is missing, check the components associated with pin 49. If a chroma waveform is present at pin 49 of U1001, check for the proper waveforms at pins 9, 10, 11 of U1001. If these waveforms are missing, check the voltages, waveforms and components associated with pins 2 thru 7, 9, 10, 11 of U1001. Check the 3.58MHz oscillator at pins 4 and 36 of U1001. Check the voltages and components associated with the color control and pin 3 of U1001, it should be 0.28V at MINIMUM and 0.4V at Maximum. If there is inadequate tint range, check the voltages, waveforms and components associated with the tint control and pin 20 of U1001. If the proper waveforms are present at pins 9, 10, 11 of U1001, refer to the "Raster" section of this Troubleshooting guide.

D TROUBLESHOOTING (Continued)

HORIZONTAL

Determine if the TV is in shutdown, refer to the "High Voltage Shutdown" section of this Troubleshooting guide. If the TV is not in shutdown, inject a horizontal signal at the base of the Horizontal Output Transistor (Q4402). If horizontal deflection is now present, check the voltages, waveforms and components associated with pins 58 thru 64 of the IF/SIF/Chroma/Vert/Horiz/AFT (U1001), and Horizontal Drive Transistor (Q4401). If there is still no horizontal sweep, check the voltages, waveforms and components associated with Horizontal Output Transistor (Q4402) and Horizontal Driver Transformer (T4401). Check the voltages and components associated with Diodes CR4120, CR4121, CR4122 for defects. The High Voltage Rectifier is part of Transformer T4402 and if defective will affect the performance of the horizontal circuits. If the horizontal oscillator is off frequency, pins 61, 62 and 63 of U1001. Horizontal linearity or foldover problems may be caused by Capacitors C4415 thru C4418 being defective.

HIGH VOLTAGE SHUTDOWN

The high voltage is monitored by Diode CR4401, rectifying pulses from the Horizontal Output Transformer (T4402). Should the high voltage increase, the rectified voltage at the cathode of Diode CR4401 will also increase and trigger Zener Diode CR4404 into conduction, shutting down the set. After 2 seconds the set will reset and turn on again. If the fault is still present, the high voltage will increase until shutdown again occurs. This process will continue until the fault is removed or the set is turned off. To troubleshoot, remove CR4401 from the circuit and use a variac for AC power. Start at 90V AC and increase as necessary until the defect is located and repaired. Return CR4401 to the circuit. NOTE: Care should be taken in defeating the high voltage shutdown circuit, as this may cause excessive X-radiation and damage to the CRT, Transformer (T4402) and associated components. Monitor the high voltage and troubleshoot.

Voltages Taken with TV in Shutdown U1001

Pin 1	0V
TP4110	164V

HIGH VOLTAGE SHUTDOWN TEST

Apply 120V AC, turn set On, set all customer controls for normal operation and momentarily short XRP4001 to XRP4002. Set should lose raster and sound for about 2 seconds, then the set should resume normal operation. If the set does not lose raster and sound, the shutdown circuit should be repaired. To resume normal operation, remove AC power and wait 2 seconds then turn set On.

VERTICAL

Inject a vertical deflection signal at pin 54 of the IF/Chroma/Luma Process/Deflection (U1001). If vertical deflection is now present, check the voltages, waveforms and components associated with pin 54 of U1001. If there is still no vertical sweep, check the voltages, waveforms and components associated with OSC Sync Transistor (Q4501), the Vertical Output IC (U4501). Vertical linearity or foldover problems may be caused by vertical feedback and bias circuits, check Electrolytics C4501, C4503, C4504, C4505, C4510 and C4511 for defects.

SYNC

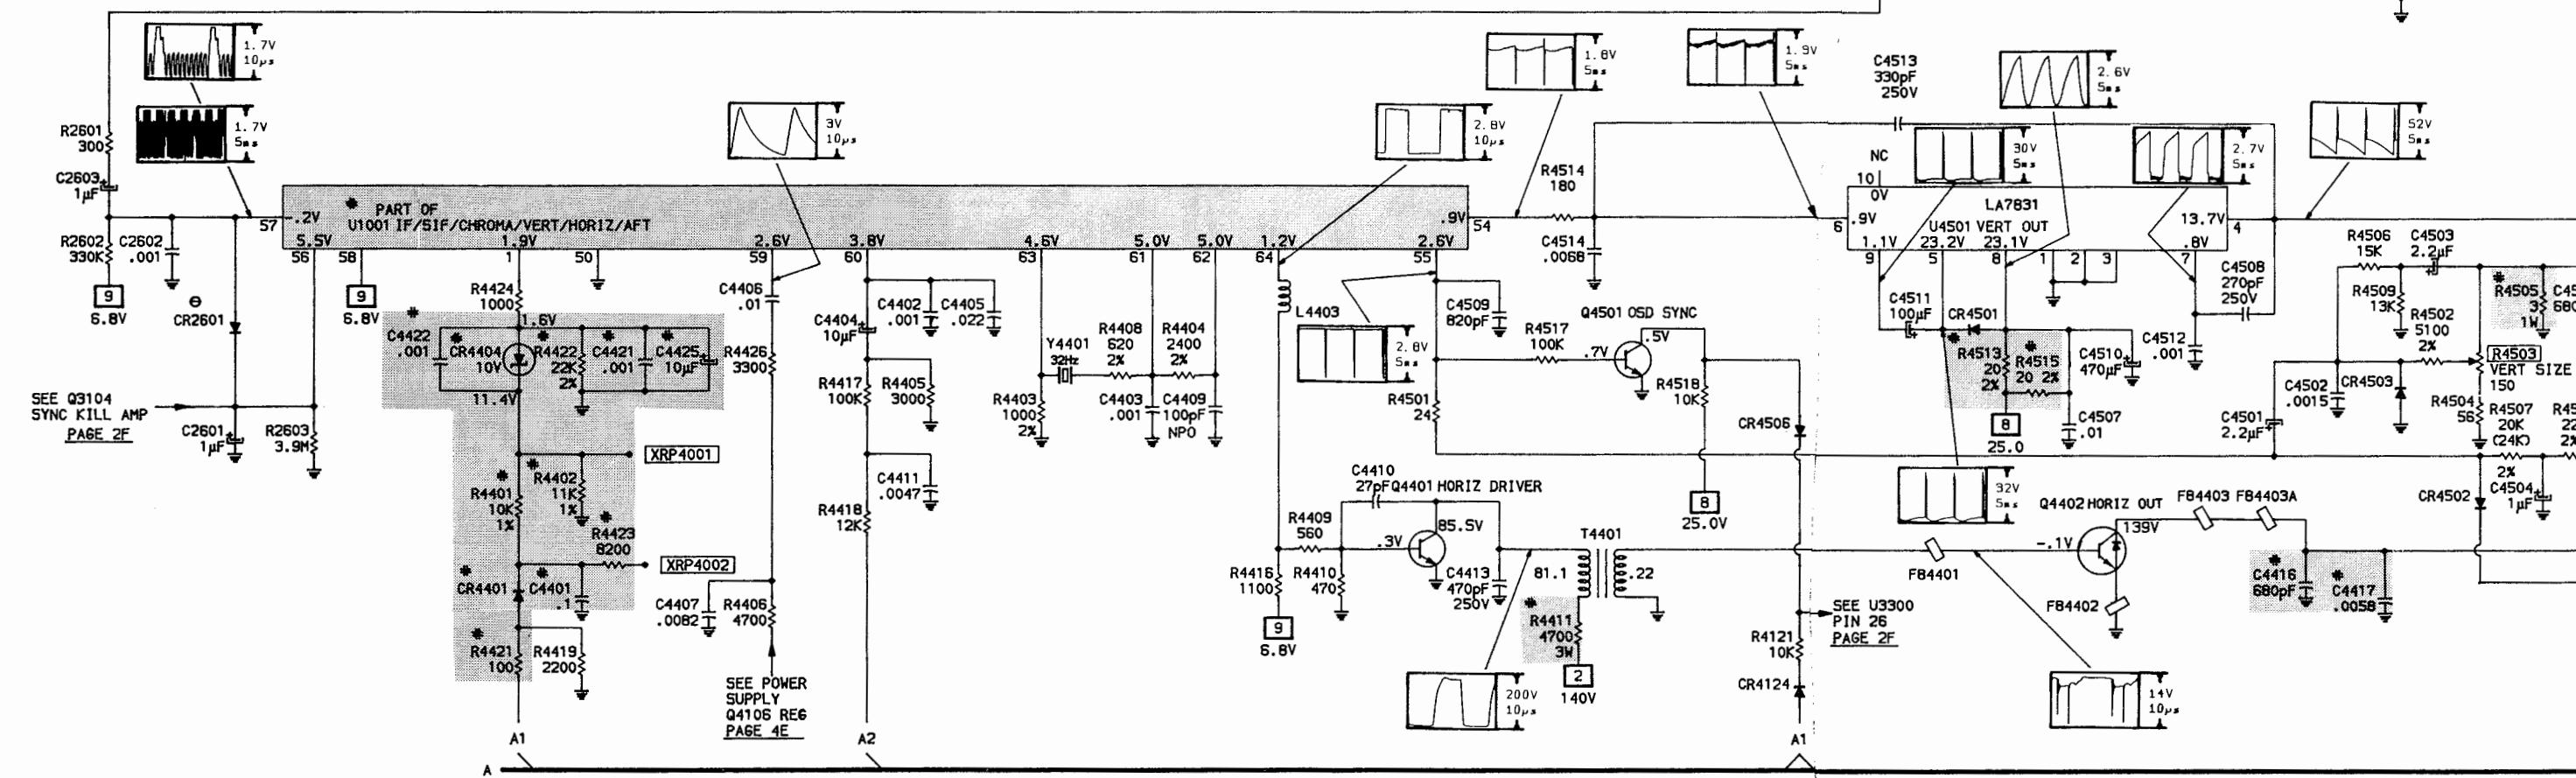

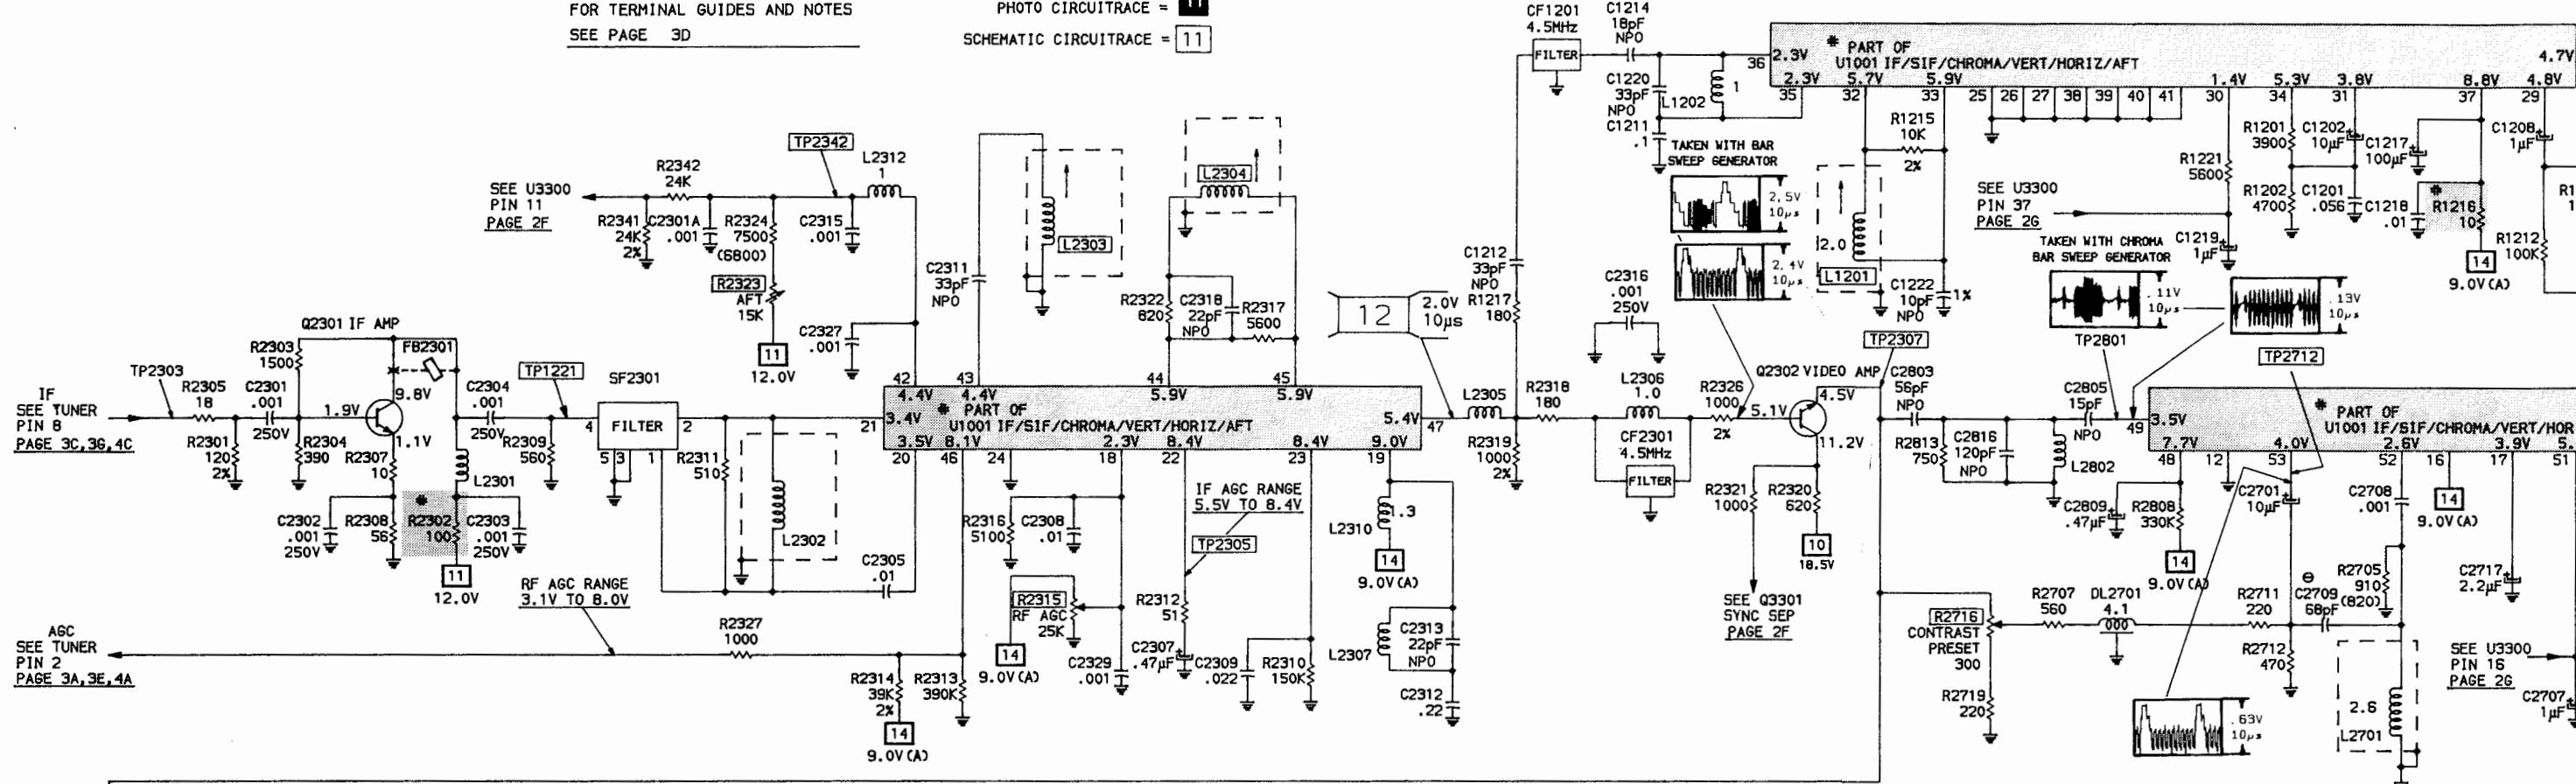

If there is no vertical or horizontal sync, check the voltages, waveforms and components associated with pins 56 and 57 of the IF/Chroma/Luma Process/Deflection (U1001). If there is no vertical sync, check the voltages, waveforms and components associated with pins 54, 55, 56 of U1001. If there is no horizontal sync, check the voltages and components associated with pins 56 thru 64 of U1001.

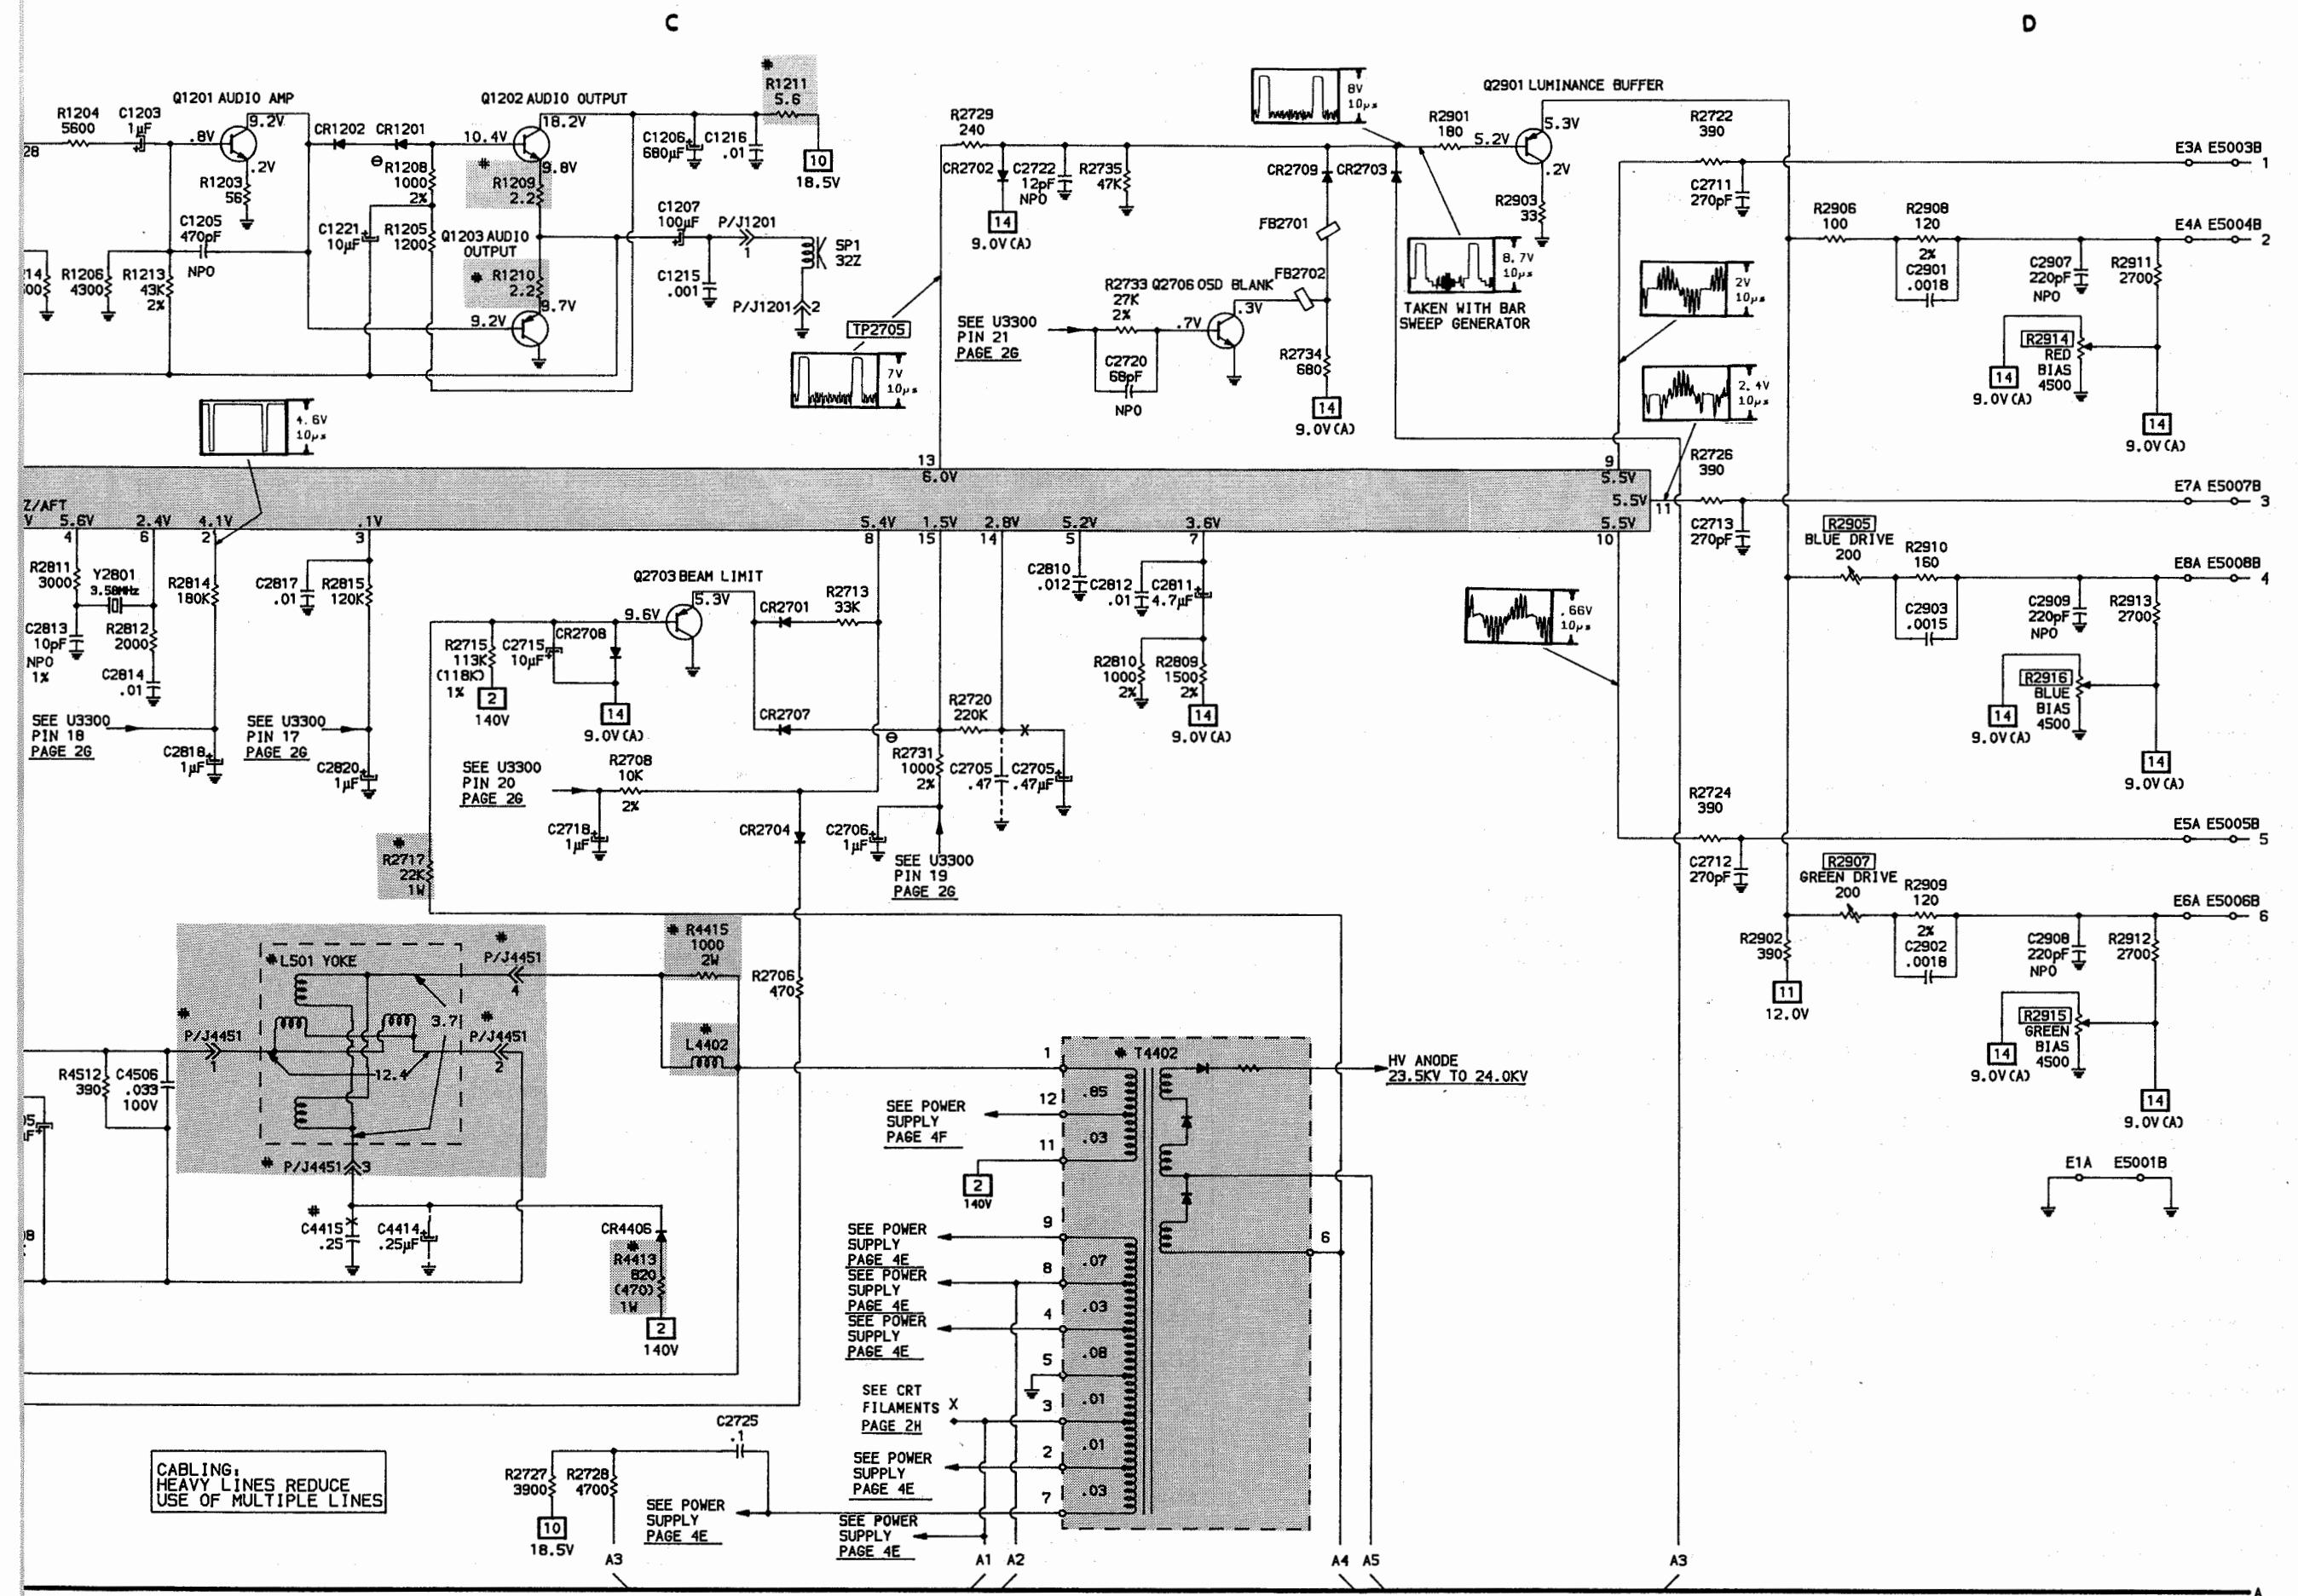

RASTER

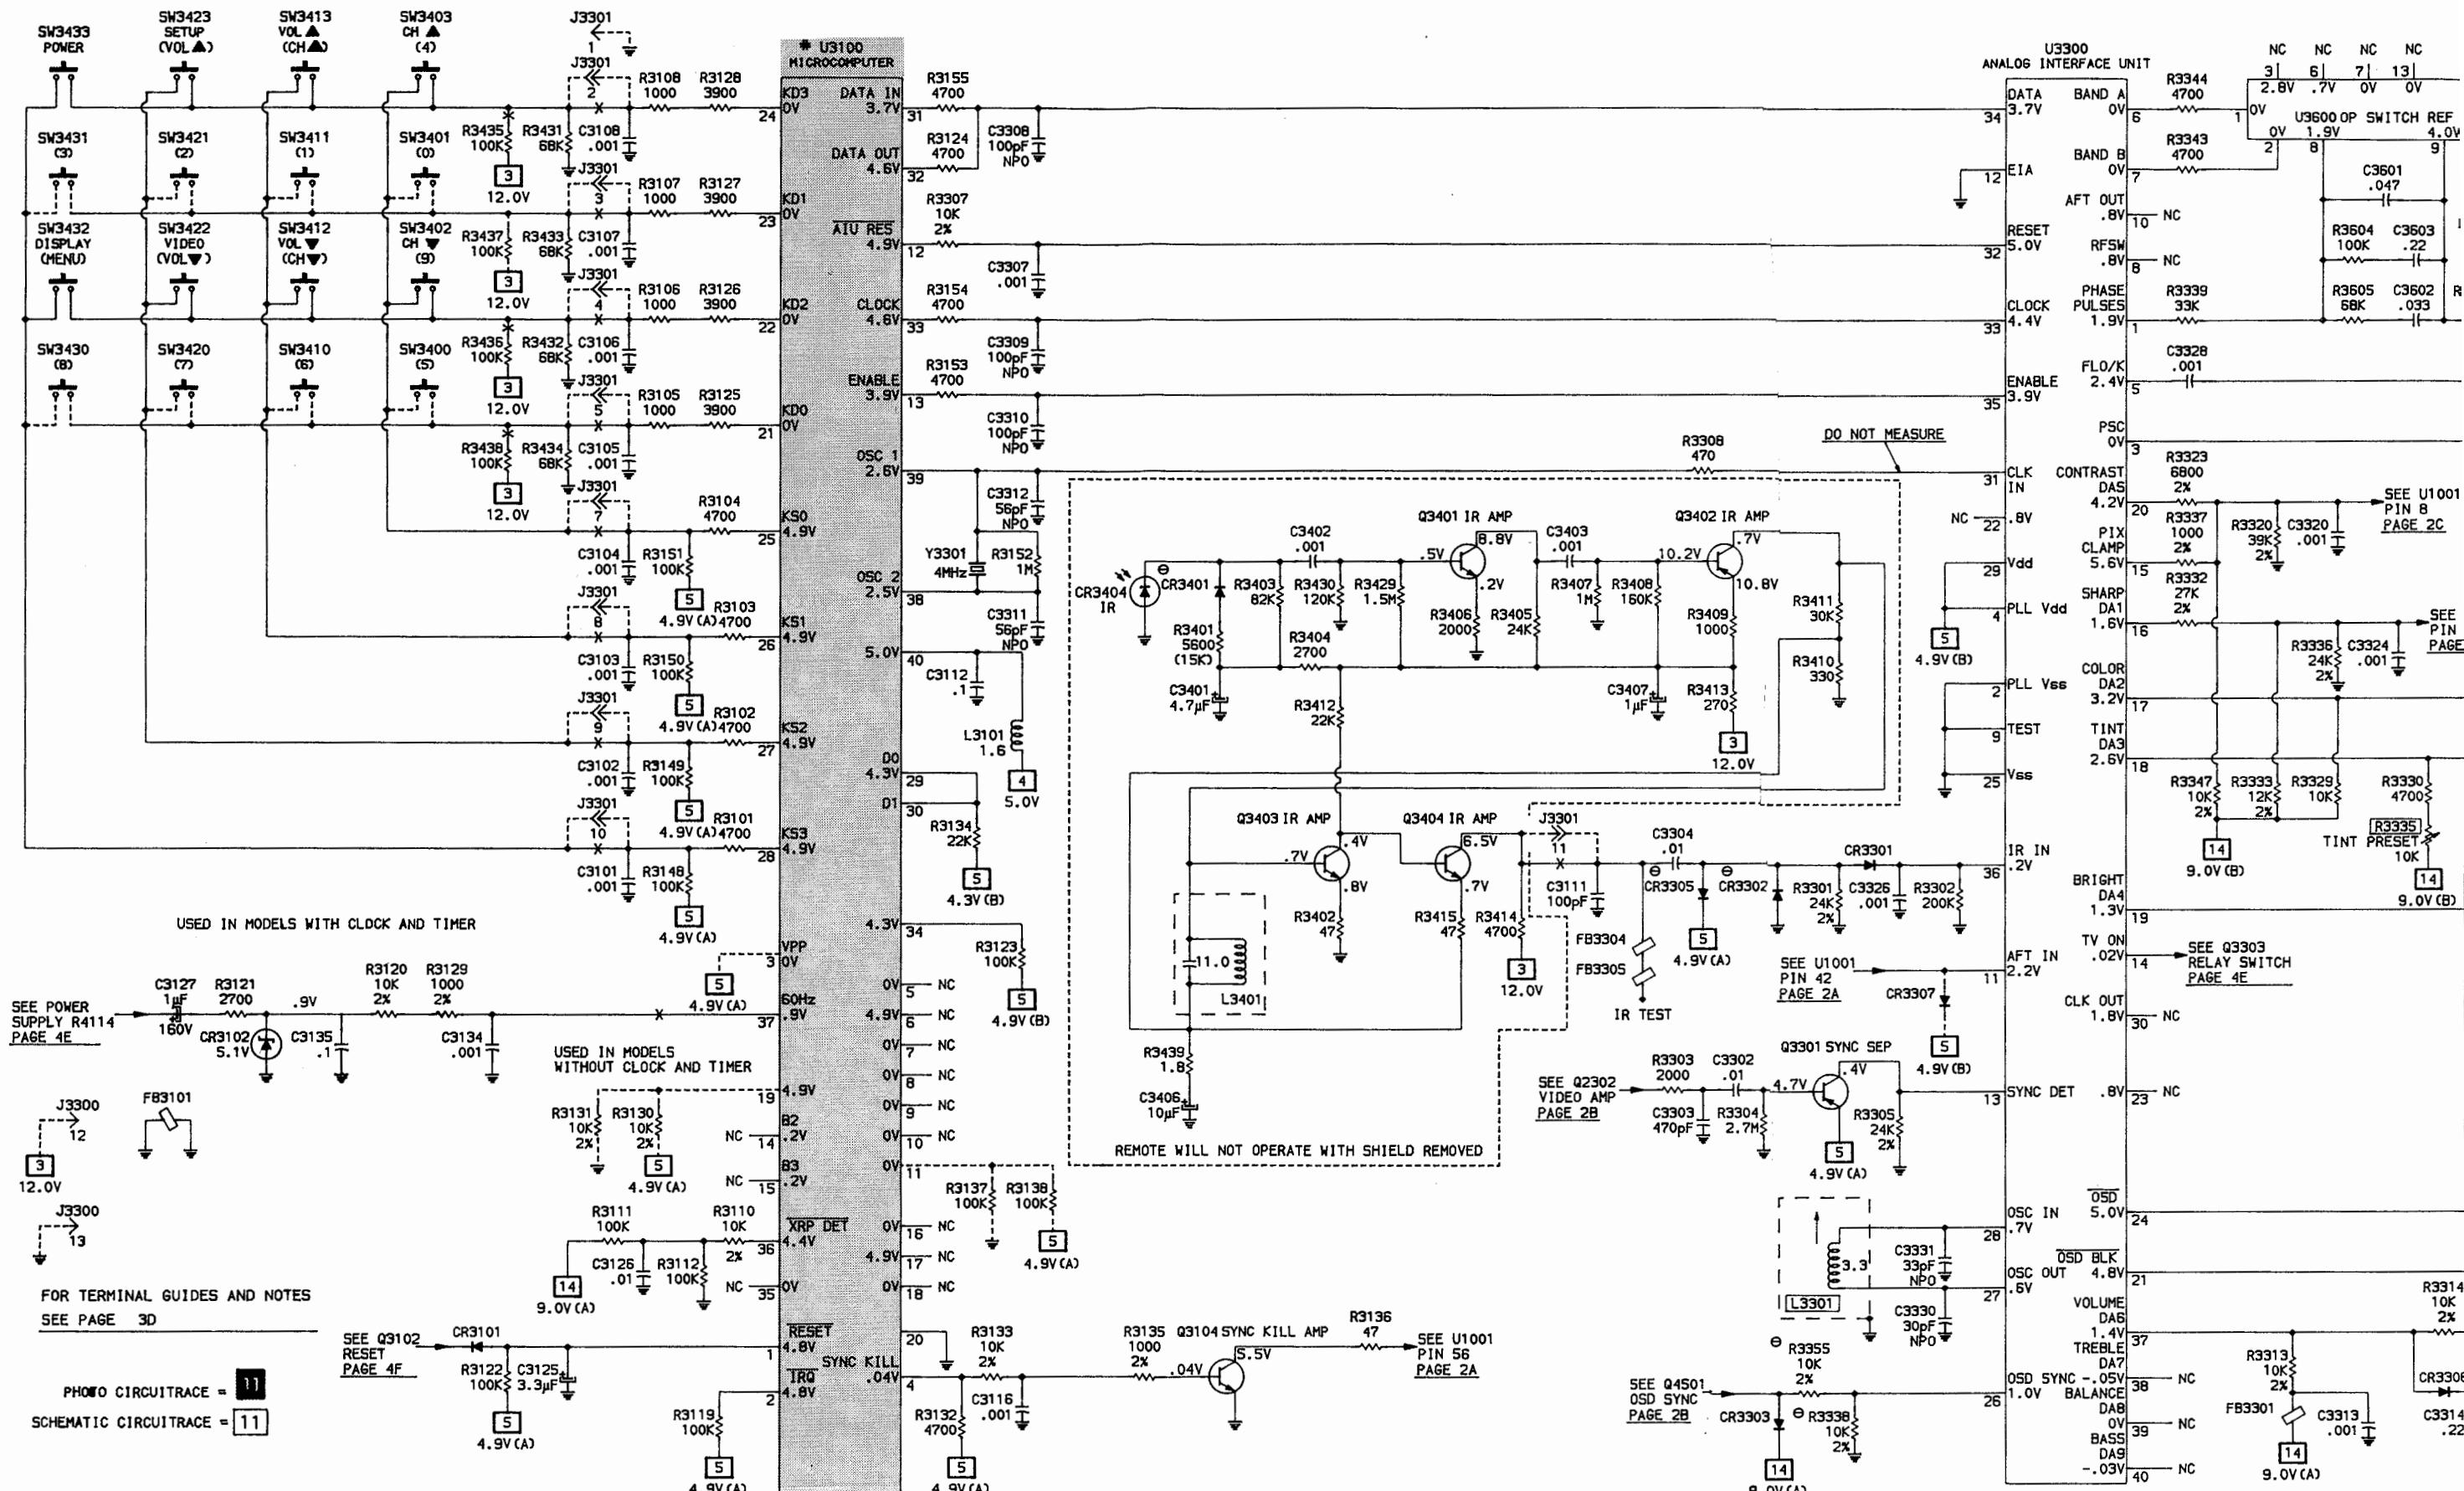

Check the CRT and CRT voltages. If there is no red, check the voltages and components associated with pin 9 of the IF/Chroma/Luma Process/Deflection (U1001), and Red Output Transistor (Q5001). If there is no green, check the voltages and components associated with pin 10 of U1001 and Green Output Transistor (Q5002). If there is no blue, check the voltages and components associated with pin 11 of U1001 and Blue Output Transistor (Q5003). If the raster has a keystone shape, check the Deflection Yoke (L501). If the raster has height or width problems, refer to the "Vertical", "Horizontal" and "Power Supply" sections of this Troubleshooting guide.

TUNER VOLTAGE CHART

	AGC	BV/U	BS1	VT	BS2	12V	5V	PSC	FLO
VHF Low Band	8.0V	11.5V	-14.6V	2.8V	-14.6V	12.0V	5.0V	.07V	3.6V
VHF High Band	8.0V	11.5V	11.1V	12.5V	-12.4V	12.0V	5.0V	.07V	3.6V
UHF Band	8.0V	.2V	11.2V	1.9V	-12.4V	12.0V	5.0V	.07V	3.7V

NOTE: VHF Low Band voltages taken on channel 2.

VHF High Band voltages taken on channel 7.

UHF Band voltages taken on channel 14.

TUNER TERMINAL GUIDE

MISCELLANEOUS ADJUSTMENTS

PRETUNING

NOTE: All procedures require an antenna connected and power applied to the set. Select TV/CATV.

Auto Memory

1. Press the Set-up button until Autoprogram is displayed.
2. Press the Volume (+) button. Available channels are scanned and stored in memory.

Add Channel

1. Press the Set-up button until Channel Memory is displayed.
2. Select channel.
3. Press the Volume (+) button to add channel.
4. Repeat steps two and three to add other channels.

Delete Channel

1. Press the Set-up button until Channel Memory is displayed.
2. Select channel.
3. Press the Volume (-) button to erase channel.
4. Repeat steps two and three to erase other channels.

Clock Set

1. Press the Set-up button, until clock set is displayed.
2. Press and hold the Minus button to set the hours.
3. Press and hold the Plus button to set the minutes.
4. Press the Clear button to end.

Sleep Timer

1. Press the Set-up button until sleep timer is displayed.
2. Press the Minus button, the receiver may be set to turn off after the first 30 minutes, or in up to four hours in 30 minute intervals by pressing the Minus button.
3. Press the Clear button to end.

This set employs Digital Customer Controls. Use Video Button (SW3422) to select video function to be altered; use Set-up button (SW3423) to select Set-up function to be altered; use Volume up (+) button (SW3413) to increase setting, Volume down (-) button (SW3412) to decrease setting. Use Reset value for all adjustments unless otherwise indicated.

B+ ADJUSTMENT

Tune in a picture. Set Brightness, Contrast and Color to MINIMUM. Connect a DC voltmeter to TP4110, low side to ground. With 120V AC line input, adjust B+ Control (R4112) for 140V DC.

HIGH VOLTAGE CHECK

Tune in a picture. Set Brightness, Color and Contrast Controls to MINIMUM. Connect a high voltage probe to CRT anode. High voltage must measure 23.5KV to 24.0KV. High voltage must never exceed 25.0KV.

RF AGC ADJUSTMENT

Tune in a picture. Adjust RF AGC Control (R2315) clockwise until snow (noise) appears in picture and then counterclockwise until snow disappears.

CONTRAST PRESET ADJUSTMENT

Tune in a picture. Set Brightness and Color to MINIMUM, Contrast to midrange. Adjust Contrast Preset Control (R2716) to a point where highlights are just visible.

DISPLAY POSITION ADJUSTMENT

Tune in a picture. Press the Video button (SW3422). Adjust OSD Oscillator (L3301) to center the display.

TINT PRESET ADJUSTMENT

Tune in a color bar pattern. Connect an oscilloscope to the red cathode pin 8, of CRT, low side to ground. Adjust Tint Preset Control (R3335) to balance the 1st and 4th bars and the 2nd and 3rd bars of waveform.

COLOR PURITY ADJUSTMENT

Tune in a crosshatch pattern. Operate the receiver for 20 minutes. Use a degaussing coil to demagnetize the CRT and mounting hardware. Set Color, Contrast, Red Bias (R2914) and Blue Bias (R2916) to MINIMUM brightness for a visible raster and Green Bias (R2915) to obtain a green raster. Loosen the Deflection Yoke clampscrew and slide the Deflection Yoke backward to obtain a vertical green band. Rotate and spread the purity magnet tabs until the green band is centered on the screen. Move the Deflection Yoke forward until a uniform green screen is obtained. Check red and blue purity.

COLOR TEMPERATURE ADJUSTMENT (B/W TRACKING)

Tune in a crosshatch pattern. Set Color, Contrast, Red Bias (R2914), Green Bias (R2915), Blue Bias (R2916) and Screen (R4210B) to MINIMUM, Green Drive (R2907), Blue Drive (R2905) and Brightness to midrange. Advance Screen Control until lines are just visible. Adjust 2 Bias controls to obtain white lines. Set Brightness and Contrast Controls to Maximum. Adjust the Green and Blue Drive Controls for best black and white picture. Check tracking at low and high brightness.

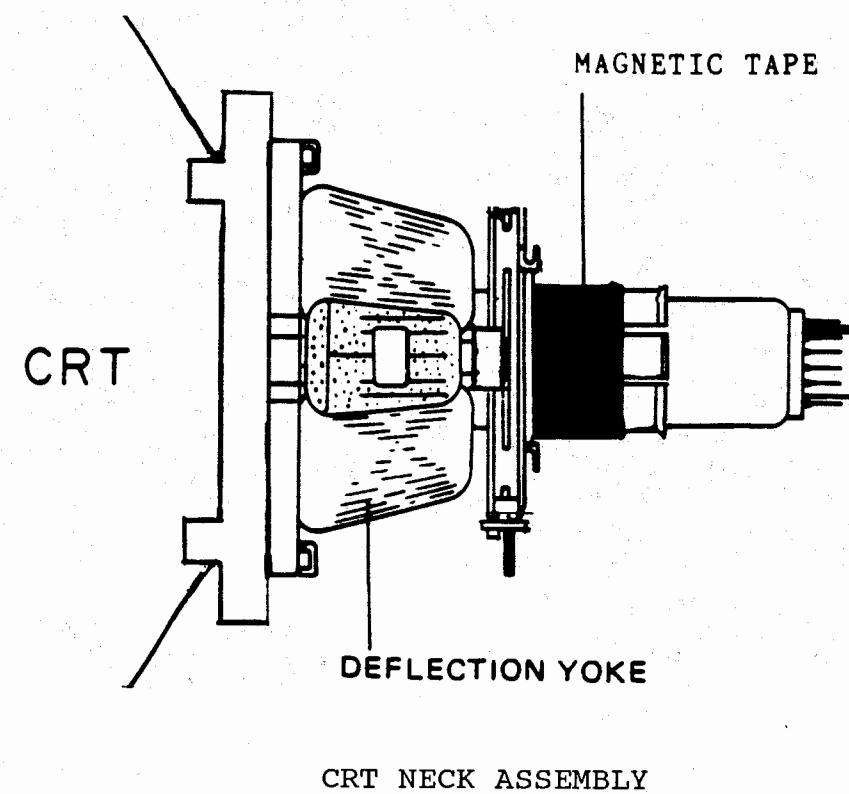

CONVERGENCE ADJUSTMENTS

Operate the receiver for 20 minutes. Connect a color bar generator to the antenna terminals and tune in a dot pattern. Adjust the 4-pole magnet tabs to converge the red and blue dots at the center of the screen. Adjust the 6-pole magnet tabs to converge the red,blue dots over the green dots at the center of the screen. NOTE: Rotate the two tabs of each set of magnets equally and opposite to converge horizontally and rotate both tabs in the same direction to converge vertically. Four and six pole magnets interact, repeat adjustment until center convergence is correct. Remove the rubber wedges from the CRT. Slightly

MISCELLANEOUS ADJUSTMENTS (Continued)

tilt the Deflection Yoke up or down to converge the vertical lines at top and bottom of screen and the horizontal lines at the right and left sides of the screen. Apply adhesive to wedges and carefully replace on CRT. Tighten Deflection Yoke clampscrew.

horizontal lines at top and bottom of screen and the vertical lines at the right and left sides of the screen. Apply adhesive to wedges and carefully replace on CRT. Tighten Deflection Yoke clampscrew.
