

SAFETY PRECAUTIONS

SERVICE WARNING

Only qualified service technicians who are familiar with safety checks and guidelines should perform service work. Before replacing parts, disconnect power source to protect electrostatically sensitive parts. Do not attempt to modify any circuit unless so recommended by the manufacturer. When servicing the receiver, use an isolation transformer between the line cord and power receptacle.

SERVICING THE HIGH VOLTAGE AND CRT

Use EXTREME CAUTION when servicing the high voltage circuits. To discharge static high voltage, connect a 10K ohms resistor in series with a test lead between the receiver ground and CRT anode lead. DO NOT lift the CRT by the neck. Always wear shatterproof goggles when handling the CRT to protect eyes in case of implosion.

X-RAY RADIATION AND HIGH VOLTAGE LIMITS

Be aware of the instructions and procedures covering X-ray radiation. In solid-state receivers and monitors, the CRT is the only potential source of X-rays. Keep an accurate high voltage meter available at all times. Check meter calibration periodically. Whenever servicing a receiver, check the high voltage at various brightness levels to be sure it is regulating properly. Keep high voltage at rated value, NO HIGHER. Excessive high voltage may cause X-ray radiation or failure of associated components. DO NOT depend on protection circuits to keep voltage at rated value. When troubleshooting a receiver with excessive high voltage, avoid close contact with the CRT. DO NOT operate the receiver longer than necessary. To locate the cause of excessive high voltage, use a variable AC transformer to regulate voltage. In present receivers, many electrical and mechanical components have safety related characteristics which are not detectable by visual inspection. Such components are identified by a # on both the schematic and the parts list. For SAFETY, use only equivalent replacement parts when replacing these components.

GENERAL GUIDELINES

Perform a final SAFETY CHECK before returning receiver to customer. Check repaired area for poorly soldered connections, and check entire circuit board for solder splashes. Check board wiring for pinched wires or wires contacting any high wattage resistors. Check that all control knobs, shields, covers, grounds, and mounting hardware have been replaced. Be sure to replace all insulators and restore proper lead dress.

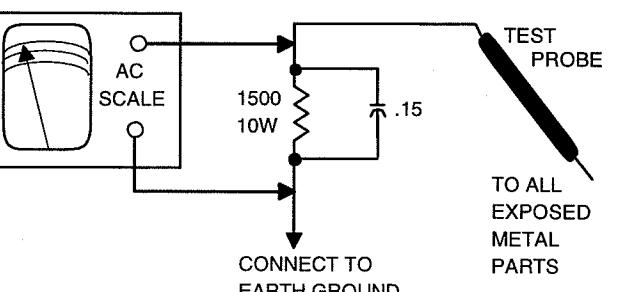

SAFETY CHECKS -- FIRE AND SHOCK HAZARD

Cold Leakage Checks for Receivers with Isolated Ground

Unplug the AC cord, connect a jumper across the plug prongs, and turn the power switch on (if applicable). Use an ohmmeter to measure the resistance between the jumped AC plug and any exposed metal cabinet parts such as antenna screw heads, control shafts, or handle brackets. Exposed metal parts with a return path should measure between 1M ohms and 5.2M ohms. Parts without a return path must measure infinity.

Hot Leakage Current Check

Plug the AC cord directly into an AC outlet. DO NOT use an isolation transformer. Use a 1500 ohms, 10W resistor in parallel with a .15μF capacitor to connect between any exposed metal parts on the receiver and a good earth ground. (See figure below.) Use an AC voltmeter with at least 5000 ohms per volt sensitivity to measure the voltage across the resistor. Check all exposed metal parts and measure voltage at each point. Voltage measurements should not exceed .75VAC, 500μA. Any value exceeding this limit constitutes a potential shock hazard and must be corrected. If the AC plug is not polarized, reverse the AC plug and repeat exposed metal part voltage measurement at each point.

HIGH VOLTAGE SHUTDOWN TEST

Momentarily short BC14901 (see base of Q14901) to ground. The receiver should lose raster and sound. If receiver does not lose raster and sound, the shutdown circuit should be repaired. To resume normal operation, remove AC power for approximately 30 seconds and then turn the receiver on.

The listing of any available replacement part herein in no case constitutes a recommendation, warranty, or guarantee by SAMS Technical Publishing as to the quality and suitability of such replacement part. The numbers of the listed parts have been compiled from information furnished to SAMS Technical Publishing by the manufacturers of the specific type of replacement part listed.

Reproduction or use, without express permission, of editorial or pictorial content, in any manner, is prohibited. No patent liability is assumed with respect to the use of the information contained herein.

MISCELLANEOUS ADJUSTMENTS

NOTE: All procedures require an antenna connected and power applied to the set.

HIGH VOLTAGE CHECK

Tune in a picture. Set brightness, contrast, and color to minimum. Connect a high voltage probe to the CRT anode. High voltage should measure 25.5kV to 27.5kV.

SERVICE MENU

The following adjustment procedures are accessed thru a service menu. To access the service menu, turn the receiver on, press the menu button and hold it down while pressing the power button. While holding down the menu button, release the power button and press the volume + button. The screen will display a one line menu, on the left the parameter P0, and on the right the value of that parameter V0. Release buttons. Adjustments are made by selecting the proper parameter and changing the value of that parameter. To change the parameter number use channel up and down buttons. To adjust the current value of that parameter use volume + and - buttons. To access and change any of the adjustments, the proper parameter pass number must be entered. This information is listed at the beginning of the alignment. When these parameters are modified, the T-Chip and the corresponding EEPROM are updated. All service adjustments are bus controlled, except focus and screen.

NOTE: In order to adjust the RF AGC, audio or video levels, tuner, PIP, or stereo circuits, the ChipperCheck hardware and software must be used. This can be purchased from Thomson.

SERVICE ADJUSTMENT PARAMETERS

Parameter No.	Parameter Name	On Set Value	Value Range	Comment
0	Pass number for service adjustment parameters.		Must set to 76	May not advance until value is set.
1	Error Code 1	0	0 - 255	Displays the first error detected. Set to 0 before exiting. See "Error Codes Chart".
2	Error Code 2	0	0 - 255	Displays the second error detected. Set to 0 before exiting. See "Error Codes Chart".
3	Error Code 3	0	0 - 255	Displays the last error detected. Set to 0 before exiting. See "Error Codes Chart".
4	Horizontal Phase	8	0 - 15	Set value to 8.
5	EW DC (Width)	12	0 - 31	Adjust for slight horizontal overscan.
6	EW Amplitude	8	0 - 15	Set value to 8.
7	EW Tilt	8	0 - 15	Set value to 8.
8	Top Corner Pin Correction	2	0 - 7	Set value to 2.
9	Bottom Corner Pin Correction	2	0 - 7	Set value to 2.
10	Vertical DC	33	0 - 63	Adjust to center vertically.
11	Vertical Size	73	0 - 127	Adjust for slight vertical overscan.
12	Vertical Countdown Mode	0	0 - 3	Set value to 0. (0 = Standard, 1 = Non-Standard, 2 = 50Hz, 3 = 48Hz)
13	Red Bias	25	0 - 127	Press menu button on the TV set for setup line.
14	Green Bias	5	0 - 127	Press menu button on the TV set for setup line.
15	Blue Bias	23	0 - 127	Press menu button on the TV set for setup line.
16	Red Drive	43	0 - 63	Press menu button on the TV set for setup line.
17	Green Drive	32	0 - 63	Press menu button on the TV set for setup line.
18	Blue Drive	31	0 - 63	Press menu button on the TV set for setup line.
19	Gemstar Horizontal OSD Position	21	0 - 255	Set value to 21.
20	Gemstar Vertical OSD Position	33	0 - 255	Set value to 33.
21	Gemstar PIP Horizontal Position	40	0 - 255	Set value to 40.
22	Gemstar PIP Vertical Position	43	0 - 255	Set value to 43.
23	Gemstar PIP Window Vertical Size	3	0 - 13	Set value to 3.

COLOR TEMPERATURE

NOTE: See Service Adjustment Parameters to change drive and bias values.

Press menu button for collapsed raster service line. Disconnect the antenna. Preset the red, green, and blue drive values to 32. Adjust screen control for a service line that is just visible. Adjust red, green, and blue drives to obtain a white raster. Check the low light to high light gray scale tracking. Repeat the procedure, if necessary, to obtain the best performance.

ERROR CODES CHART

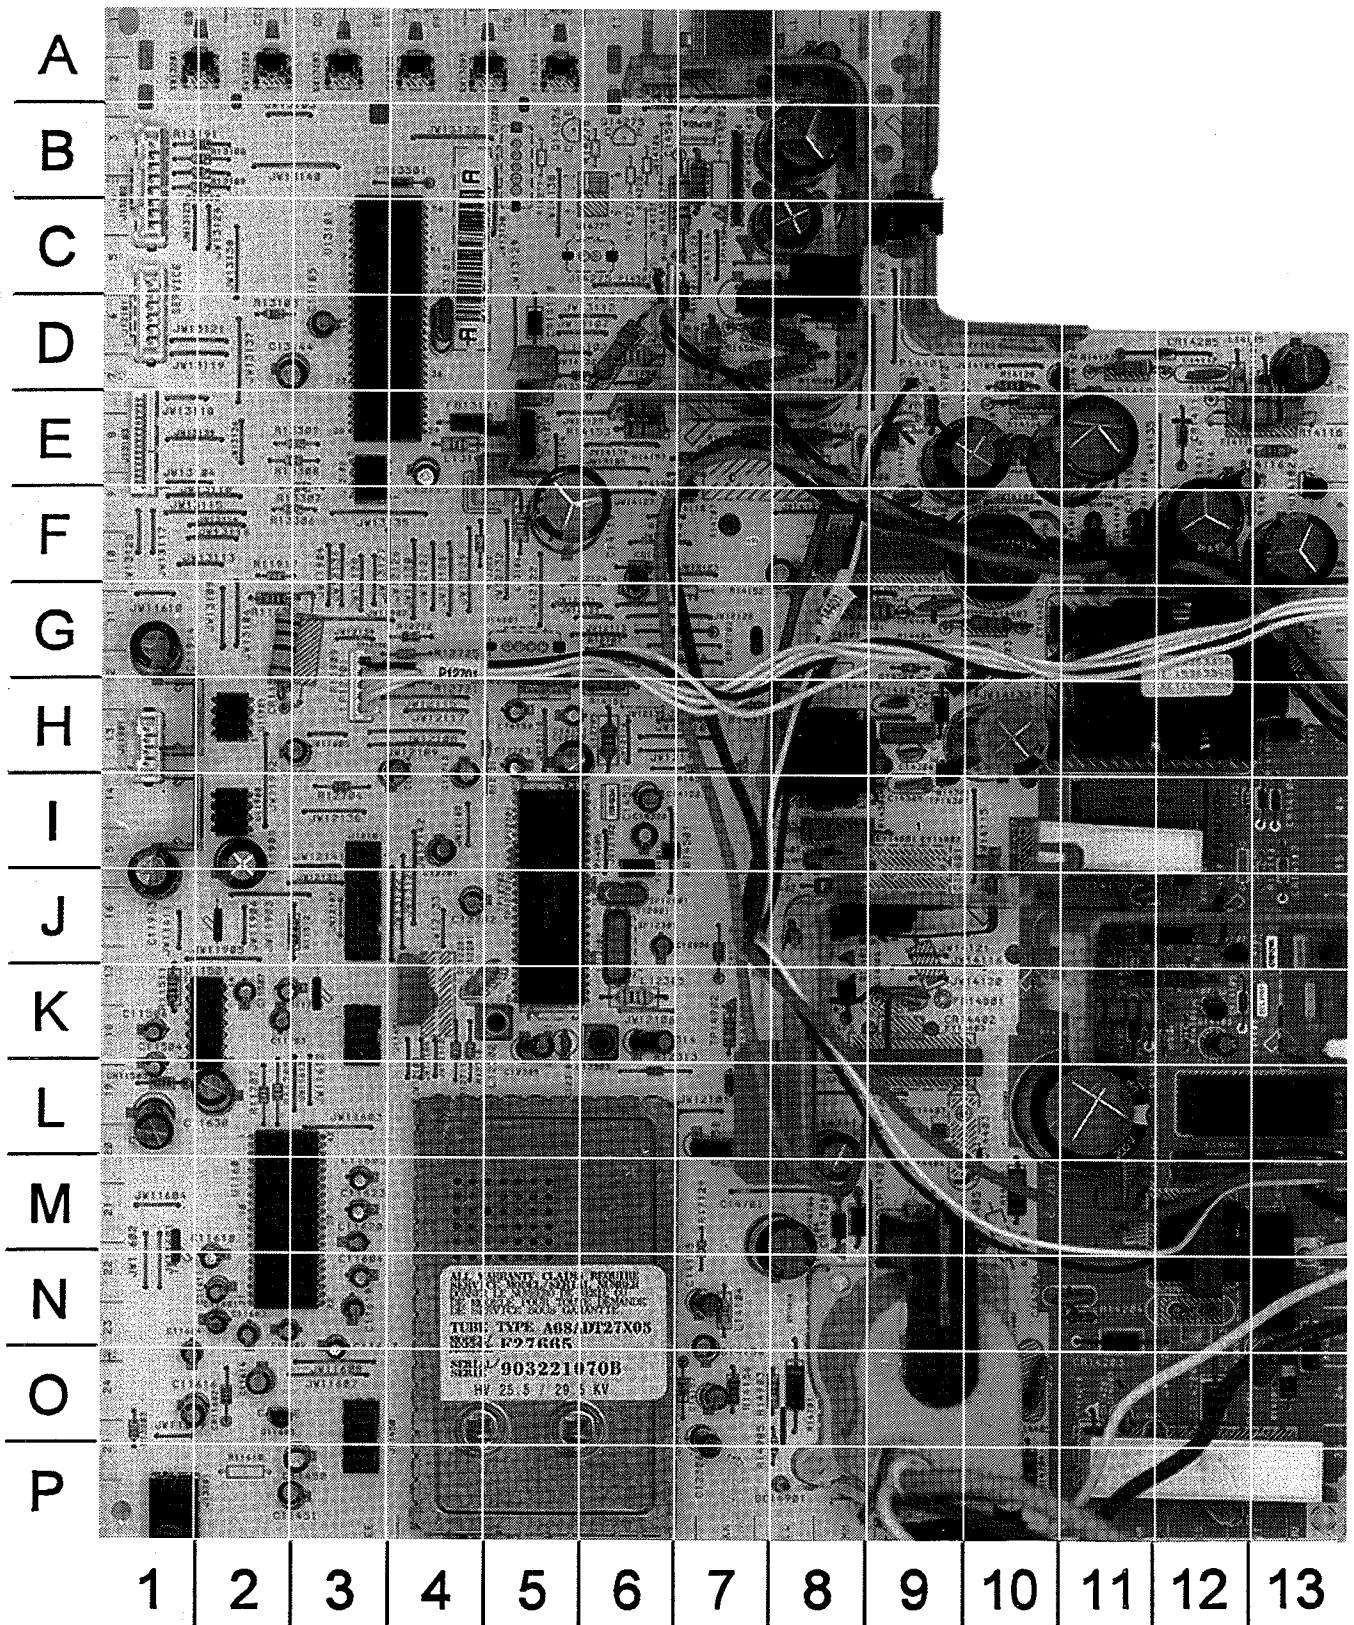

Error Code	Error Location	Condition Indicated	
		DEC	HEX
0	No error code	00	
1	Detected by U13101	01	16.0V STBY source is failing.
3	Detected by U13101	03	12.0V source is failing.
8	U12101	08	X-ray protection caused high voltage shutdown.
9	U12101	09	Power supply problem at reset/U12101.
10	PIP module error	0A	Power supply problem at reset/PIP.
11	Stereo decoder	0B	Power supply problem at reset/Stereo decoder.
16	Detected by U13101	10	U13101 run IIC clock or data held low.
18	Detected by U13101	12	U13101 standby IIC clock or data held low.
34	Gemstar Board	22	Gemstar fails to acknowledge.
44	U18100	2C	F2PIP fails to acknowledge.
102	Octal DAC	66	Octal DAC fails to acknowledge.
128	Stereo decoder	80	Stereo decoder fails to acknowledge.
160	Main or PIP tuner EEPROM	A0	Main or PIP tuner EEPROM fails to acknowledge.
186	U12101	BA	U12101 fails to acknowledge.
196	Main tuner PLL/DAC	C4	Main tuner PLL IC fails to acknowledge.
198	Main tuner PLL/DAC	C6	Main tuner DAC IC fails to acknowledge.

ERROR CODES

If certain failures occur, the matching error codes will be stored in the EEPROM. These error codes will be displayed in parameters "1", "2", and "3". The first failure error code will be stored at parameter "1", and the second failure error code in parameter "2". Parameter "3" will be updated to display the most recent failure occurred in the chassis. If a failure of a bus IC occurred, the normal acknowledgement

checking of that bus will be disabled in the service mode and the address of that IC which failed will be stored in one of the error code parameters. After every repair is done to the chassis it is recommended to check the error code parameters, and reset them back to value "0".

Important Parts Information

- The parts listed here are those not usually available from a well-stocked supply cabinet or bin.
- Where items may be replaced with equivalent parts, several alternates are shown from participating vendors.
- On the parts lists, safety items are marked with a # to remind you that only exact replacements are recommended for these items.
- When ordering parts, state the model number, part number, and description.

Obtaining Parts

Many of these parts are available from your local Sams authorized distributor or the manufacturer of the equipment. Call Sams for the name of your nearest distributor:

800-428-7267

Or consult the Sams Annual Index for the address of the original equipment manufacturer.

Participating Vendors

Information on test equipment and replacement parts is listed in these pages for the following participating vendors. Consult the Sams Annual Index for their current address.

- Philips ECG Company (ECG)
- Sencore, Inc.
- Terrell & Nobis (TNI Electronics)

TEST EQUIPMENT

Test equipment listed by participating manufacturer illustrates typical or equivalent equipment used by Sams engineers to obtain measurements. This equipment is compatible with most types used by field service technicians.

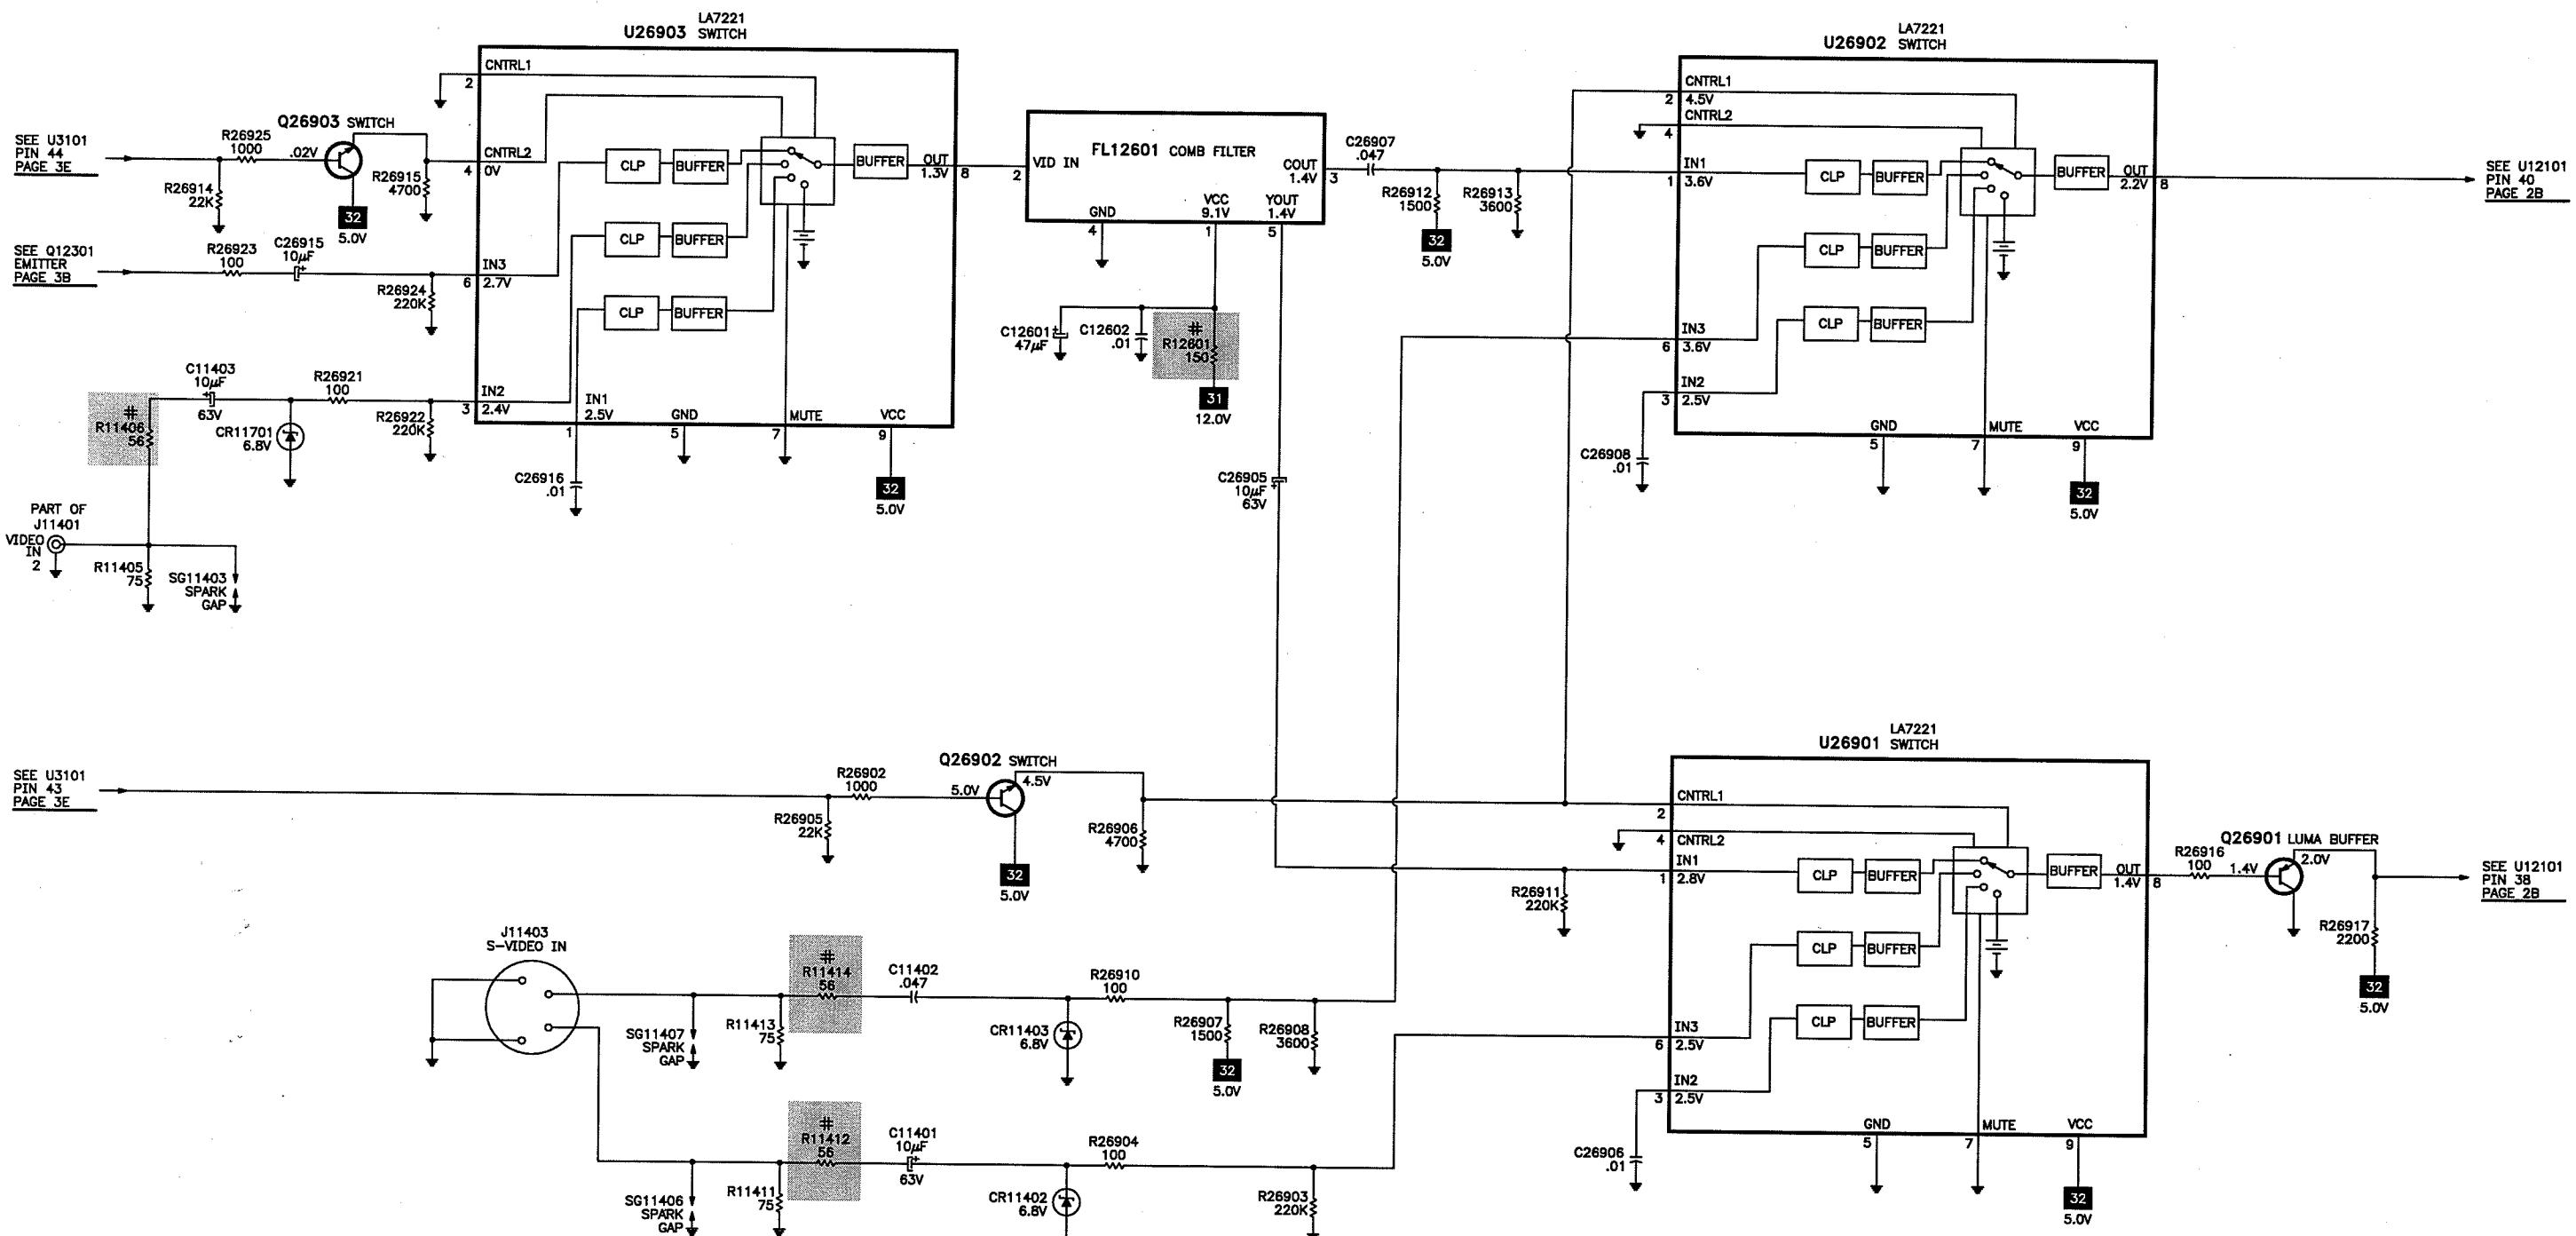

Equipment	Sencore No.	Equipment	Sencore No.
Oscilloscope Generators	SC3100	Isolation Transformer	PR570
RGB	CM2125	Capacitance Analyzer	LC102
Multiburst Signal	VG91	CRT Analyzer	CR7000
Color Bar	VG91	AC Leakage Tester	PR570
TV Stereo	VG91	Inductance Analyzer	LC102
Digital VOM	SC3100	Flyback Yoke Tester	TVA92
Frequency Meter	SC3100	Field Strength Meter	SL753
Hi-Voltage Probe	HP200	Transistor Tester	TF46
Accessory Probes	TP212	Horizontal Analyzer	HA-2500
		Video Analyzer	VG91, TVA92
