

## Safety Precautions

### Service Warning

Only qualified service technicians who are familiar with safety checks and guidelines should perform service work. Before replacing parts, disconnect power source to protect electrostatically sensitive parts. Do not attempt to modify any circuit unless so recommended by the manufacturer. When servicing the receiver, use an isolation transformer between the line cord and power receptacle.

### Servicing the High Voltage and CRT

Use EXTREME CAUTION when servicing the high voltage circuits. To discharge static high voltage, connect a 10K ohms resistor in series with a test lead between the receiver ground and CRT anode lead. DO NOT lift the CRT by the neck. Always wear shatterproof goggles when handling the CRT to protect eyes in case of implosion.

### X-Ray Radiation and High Voltage Limits

Be aware of the instructions and procedures covering X-ray radiation. In solid-state receivers and monitors, the CRT is the only potential source of X-rays. Keep an accurate high voltage meter available at all times. Check meter calibration periodically. Whenever servicing a receiver, check the high voltage at various brightness levels to be sure it is regulating properly. Keep high voltage at rated value, NO HIGHER. Excessive high voltage may cause X-ray radiation or failure of associated components. DO NOT depend on protection circuits to keep voltage at rated value. When troubleshooting a receiver with excessive high voltage, avoid close contact with the CRT. DO NOT operate the receiver longer than necessary. To locate the cause of excessive high voltage, use a variable AC transformer to regulate voltage. In present receivers, many electrical and mechanical components have safety related characteristics which are not detectable by visual inspection. Such components are identified by a # on both the schematic and the parts list. For SAFETY, use only equivalent replacement parts when replacing these components.

### General Guidelines

Perform a final SAFETY CHECK before returning receiver to customer. Check repaired area for poorly soldered connections, and check entire circuit board for solder splashes. Check board wiring for pinched wires or wires contacting any high wattage resistors. Check that all control knobs, shields, covers, grounds, and mounting hardware have been replaced. Be sure to replace all insulators and restore proper lead dress.

#### HORIZONTAL OSCILLATOR DISABLE TEST

Place a jumper between pins 3 and 4 of IC803. Apply 9.0V to the cathode of D001. Connect a high voltage probe to the CRT anode. Set the AC supply to 45VAC. Turn the receiver on and slowly increase the AC supply. Confirm the high voltage does not exceed 37.1kV when the horizontal just begins to pull out of sync. If the high voltage should exceed 37.1kV or the receiver fails to lose horizontal sync, the horizontal oscillator disable circuit should be repaired. Remove jumper and the 9.0V DC supply.

The listing of any available replacement part herein in no case constitutes a recommendation, warranty, or guarantee by SAMS Technical Publishing as to the quality and suitability of such replacement part. The numbers of the listed parts have been compiled from information furnished to SAMS Technical Publishing by the manufacturers of the specific type of replacement part listed.

Reproduction or use, without express permission, of editorial or pictorial content, in any manner, is prohibited. No patent liability is assumed with respect to the use of the information contained herein.

### Safety Checks — Fire and Shock Hazard

#### Cold Leakage Checks for Receivers with Isolated Ground

Unplug the AC cord, connect a jumper across the plug prongs, and turn the power switch on (if applicable). Use an ohmmeter to measure the resistance between the jumped AC plug and any exposed metal cabinet parts such as antenna screw heads, control shafts, or handle brackets. Exposed metal parts with a return path should measure between 1M ohms and 5.2M ohms. Parts without a return path must measure infinity.

#### Hot Leakage Current Check

Plug the AC cord directly into an AC outlet. DO NOT use an isolation transformer. Use a 1500 ohms, 10W resistor in parallel with a .15μF capacitor to connect between any exposed metal parts on the receiver and a good earth ground. (See figure below.) Use an AC voltmeter with at least 5000 ohms per volt sensitivity to measure the voltage across the resistor. Check all exposed metal parts and measure voltage at each point. Voltage measurements should not exceed .75VAC, 500μA. Any value exceeding this limit constitutes a potential shock hazard and must be corrected. If the AC plug is not polarized, reverse the AC plug and repeat exposed metal part voltage measurement at each point.

## TUNER INFORMATION

## MAIN TUNER VOLTAGE CHART

Pin	VHF Low Band	VHF High Band	UHF Band
(1) AGC	2.0V	2.1V	1.6V
(2) TU	1.1V	4.1V	5.1V
(3) ADRS	0V	0V	0V
(4) SCL	3.6V	3.6V	3.6V
(5) SDA	3.6V	3.6V	3.6V
(6) NC	0V	0V	0V
(7) +B	5.0V	5.0V	5.0V
(8) NC	0V	0V	0V
(9) BTL	4.2V	7.5V	8.5V
(10) NC	0V	0V	0V
(11) IF1	0V	0V	0V
(12) IF	0V	0V	0V
(13) BV	9.0V	9.0V	9.0V
(14) AUDIO	.37V	.37V	.37V
(15) GND	0V	0V	0V
(16) AFT	1.9V	1.9V	1.9V
(17) AGC OUT	2.0V	2.1V	1.6V
(18) V	2.1V	2.1V	2.1V
(19) AGC CONT	0V	0V	0V
(20) GND	0V	0V	0V
(21) ST	0V	0V	0V
(22) BIL	0V	0V	0V
(23) MODE	0V	0V	0V
(24) F-MONO	0V	0V	0V
(25) MUTE	0V	0V	0V
(26) R	0V	0V	0V
(27) L	0V	0V	0V

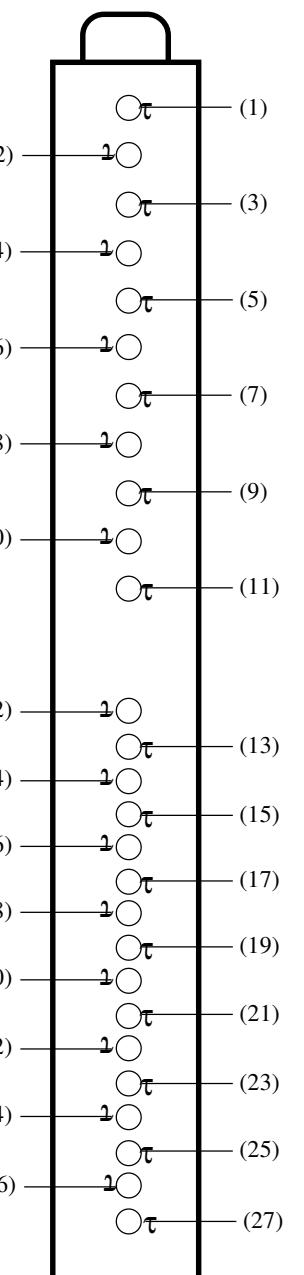

NOTE: VHF Low Band voltages taken on channel 2.  
VHF High Band voltages taken on channel 7.  
UHF Band voltages taken on channel 14.

## SUB TUNER VOLTAGE CHART

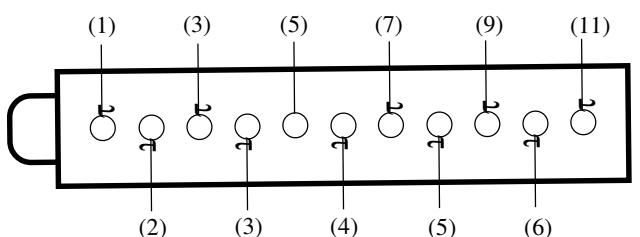

Pin	VHF Low Band	VHF High Band	UHF Band
(1) AGC	1.9V	1.9V	1.8V
(2) TU	1.0V	4.6V	4.7V
(3) ADD	5.0V	5.0V	5.0V
(4) SCL	3.6V	3.6V	3.6V
(5) SDA	3.6V	3.6V	3.6V
(6) BM	0V	0V	0V
(7) BPL	5.0V	5.0V	5.0V
(8) NC	0V	0V	0V
(9) BTL	4.1V	7.7V	7.7V
(10) NC	0V	0V	0V
(11) IF1	0V	0V	0V

NOTE: VHF Low Band voltages taken on channel 2.  
VHF High Band voltages taken on channel 7.  
UHF Band voltages taken on channel 14

## MAIN TUNER TERMINAL GUIDE

## SUB TUNER TERMINAL GUIDE

NOTE: This receiver employs digital customer controls. All adjustments are at normalized position unless otherwise indicated.

## B+ CHECK

Connect a digital DC voltmeter to pin 16 (P2) of T801 and the common tie point. Set brightness and picture to minimum. With AC line voltage set to 120VAC, B+ should read  $130V^* \pm 1.0V^*$ .

\* Taken from a common tie point.

## HIGH VOLTAGE CHECK

Tune in a picture. Set brightness and picture for a black raster. Connect a high voltage probe to CRT anode. High voltage should read 26kV to 28kV.

## PURITY CHECK

Press recall button on transmitter to enter purity check mode.

NOTE: Receiver must be in serviceman mode for purity colors to display on screen. Press recall button to cycle through white, red, green, blue, and normal screens.

## PURITY

Enter serviceman mode. See Purity Check to display a green raster. Loosen deflection yoke and move it back as far as possible. Loosen locking ring and move the purity tabs to center the vertical green band. Slowly slide the deflection yoke forward until a uniform green screen is obtained.

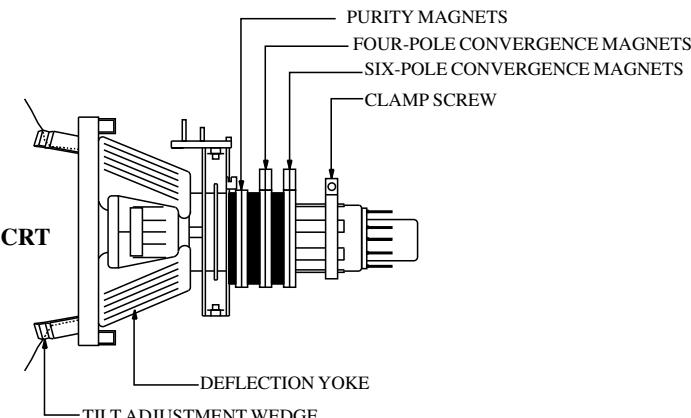

## CONVERGENCE

Connect a signal generator to antenna terminal and tune in a dot pattern. Adjust the 4-pole magnets to converge the red and blue dots at the center of the screen. Adjust the 6-pole magnets to converge the red/blue dots over the green dots at the center of the screen.

NOTE: Spread the two tabs of each set of magnets equally and opposite to converge vertically, and rotate both tabs in the same direction to converge horizontally. Since the four and six pole magnets interact, repeat the adjustment until center convergence is correct.

Tune in a crosshatch pattern. Remove rubber wedges between the deflection yoke and CRT. Tilt deflection yoke up or down to converge the vertical lines at the top and bottom of the screen and the horizontal lines at the left and right sides of the screen. Tilt the deflection yoke left or right to converge the horizontal lines at the top and bottom of the screen and the vertical lines at the left and right sides of the screen. Repeat convergence procedure if necessary to obtain the best overall convergence. Replace rubber wedges.

## CRT NECK ASSEMBLY

## ENTERING SERVICEMAN MODE

Turn the receiver on and momentarily short pins 3 and 8 of connector TP. In the upper left side of the picture, CHK is displayed in yellow. Press the action and volume up buttons on the receiver. The CHK display turns red. The serviceman mode is indicated by CHK displayed in red at the upper left side of the picture. Press the power button on the remote or the action and volume down buttons on the receiver repeatedly to select one of seven service modes.

B = Sub Adjustments

C = Cut-Off Adjustments

D = Pin Cushion Adjustments

M = Stereo Adjustments

P = PIP Adjustments

S = Options Adjustments

X = Comb Filter Adjustments

CHK = Normal operation of channel and volume buttons.

## EXIT SERVICEMAN MODE

NOTE: Always exit serviceman mode when finished making adjustments.

Press action and power buttons on receiver control panel simultaneously for approximately 2 seconds to exit serviceman mode. The receiver will display a self check menu with audio on channel 3.

## SUB ADJUSTMENTS

NOTE: Write down original On-set values in detail before making any adjustments in case a misadjustment occurs. Press channel up or down buttons on remote to select any of adjustment addresses. Press volume up or down buttons on remote to change level of adjustment.

## Sub Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
Sub Color (B0)	0-63	31	25
Sub Tint (B1)	0-63	31	47
Sub Brightness (B2)	0-63	31	44
Sub Contrast (B3)	0-31	16	26
Sub Tint Video (B4)	0-31	16	15
Sub Color Video (B5)	0-31	16	16
Sub Tint Component (B6)	0-127	63	58
Sub Color Component (B7)	0-63	31	41
Sub Sharp TV/Video (B8)	0-31	10	13
Sub Sharp Component (B9)	0-31	31	31
Sub Contrast Fixed (Ba)	0-31	15	31

## Sub Color (B0)

Tune in a color bar signal. Connect oscilloscope to pin 1 of connector C1 on the C board. Connect TPD2 to ground. Enter serviceman mode and select Sub adjustment. Select sub color (B0). Adjust waveform for  $.9Vp-p \pm .05Vp-p$ . Remove jumper.

## Sub Tint (B1)

Tune in a color bar signal. Connect oscilloscope to pin 1 of connector C1 on the C board. Connect TPD2 to ground. Enter serviceman mode and select Sub adjustment. Select sub tint (B1). Adjust waveform so the 1st and 4th peaks are of equal amplitude. Remove jumper.

## Sub Brightness (B2)

This adjustment must be made after sub picture and color temperature adjustments are made. DO NOT adjust screen after sub brightness is set. Connect a color bar signal with pure white and pure black to the antenna input. Set color to minimum. Enter serviceman mode and select Sub adjustment. Select sub brightness (B2). Adjust until the black bars start to turn gray, then decrease adjustment until bars turn black.

## Sub Contrast (B3)

NOTE: This adjustment is factory set, DO NOT adjust unless CRT or C board is replaced.

Connect a color bar signal to the antenna input. Connect oscilloscope to pin 2 of connector C1 on C board. Connect TPD2 to ground. Enter serviceman mode and select Sub adjustment. Select sub contrast (B3). Adjust for  $2.8Vp-p \pm .1Vp-p$  from white to black level. Do not include sync tip in measurement. Remove jumper.

## MISCELLANEOUS ADJUSTMENTS continued

### CUT-OFF ADJUSTMENTS

Follow same procedure used for Sub adjustments.

#### Cut-Off Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
Red Cutoff (C0)	0-255	128	62
Green Cutoff (C1)	0-255	128	79
Blue Cutoff (C2)	0-255	128	79
User Brightness (C3)	0-63	31	31
Green Drive (C4)	0-127	64	57
Blue Drive (C5)	0-127	64	56
Drive C Temp (C6)	0-127	8	8
Contrast C Temp (C7)	0-127	5	5

### Color Temperature (C0, C1, C2, C4, C5)

NOTE: Observe low and high brightness areas of a B/W picture for proper tracking.

Enter serviceman mode and select Cut-Off adjustments. Set the red cutoff (C0), green cutoff (C1), and blue cutoff (C2) for a gray picture. Set the green drive (C4) and the blue drive (C5) for correct white areas.

### OPTIONS ADJUSTMENTS

Follow same procedure used for Sub adjustments.

#### Options Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
ABL Gain (S0)	0-3	3	3
ABL Point (S1)	0-3	3	3
RGB Brightness (S2)	0-15	8	8
RGB Gamma (S3)	0, 1	1	1
Color Gamma (S4)	0, 1	1	1
VSM-G (S5)	0, 1	0	0
BS Point (S6)	0-7	7	6
Clock Adjust (S7)	0-255	128	109
Loud Comp (S8)	0-31	31	31
Caption Dig Filter SW (S9)	0, 1	0	0
Caption Scroll (Sa)	0 - 2	1	1
RGB Matrix (Sb)	0-7	6	6
RGB Matrix Comp (Sc)	0-7	5	5

### Clock Adjustment (S7)

Connect a frequency counter to pin 13 of IC001. Turn receiver off. Record the frequency. Turn the receiver on and enter the serviceman mode and select options adjustments. Select clock adjustment (S7). Adjust (S7) based on the following formula:

$$(S7) = 128 + .901 X 1000000 [244.1406 - \text{pin 13 (measured in Hz)}]$$

244.1406

### PIP ADJUSTMENTS

PIP adjustments can be entered but no adjustments should be necessary. They are factory set for normal PIP performance. Write original On-set values in case one of the adjustments is changed by mistake. Confirm that the values are as shown for default level.

#### PIP Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
PIP Color (P0)	0-127	92	55
PIP Tint (P1)	0-255	54	54
PIP Brightness (P2)	0-31	22	5
PIP Contrast (P3)	0-127	80	55
Up 1/9 (P4)	0-255	26	26
Down 1/9 (P5)	0-255	143	143
Left 1/9 (P6)	0-255	10	10
Right 1/9 (P7)	0-255	101	101
Up 1/16 (P8)	0-255	26	26
Down 1/16 (P9)	0-255	160	160
Left 1/16 (Pa)	0-255	10	10
Right 1/16 (Pb)	0-255	116	116
PIP Freerun (Pc)	N/A	N/A	0
PIP YDL (Pd)	0-15	4	4

### STEREO ADJUSTMENTS

All adjustments were made using a MTS TV / stereo generator connected to the antenna terminal. Set the customer controls to normal listening levels and select stereo mode.

#### MTS Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
Input Level (M0)	0-63	33	30
Low - Level Separation (M1)	0-15	6	7
High - Level Separation (M2)	0-63	25	28

#### Input Level (M0)

On generator select pilot, 1kHz audio frequency, and L+R modulating signal. Connect an oscilloscope to pin 22 of IC2201. Enter serviceman mode and select stereo adjustments. Select input level (M0). Adjust the data value for 1Vp-p.

#### High Level Separation (M1) and Low Level Separation (M2)

On generator select pilot, 300Hz audio frequency, and left modulating signal. Connect an oscilloscope to pin 22 of IC2201. Enter serviceman mode and select stereo adjustments. Select low level separation (M1). Adjust the data value for minimum amplitude of waveform. On generator select 8kHz audio frequency. Select high level separation (M2). Adjust the data value for minimum amplitude of the waveform. Repeat until no further decrease in amplitude can be obtained.

### COMB FILTER ADJUSTMENTS

NOTE: Write down original On-set values in detail before making any adjustments in case a misadjustment occurs.

#### Comb Filter Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
Comb Clip Level (X0)	0 - 255	152	152
Comb Switch (X1)	0 - 63	12	12
Comb Limit (X2)	0 - 63	24	24
Comb Core (X3)	0 - 127	41	41
Comb RF Delay (X4)	0 - 127	19	19
Comb Video Delay (X5)	0 - 127	18	18
Comb VMLM (X6)	0 - 127	90	90
Comb VMCO (X7)	0 - 63	24	24
Comb Sharp (X8)	0 - 255	123	123
Comb VM Level (X9)	0 - 255	255	255
Comb VMPKF (Xa)	0, 1	1	1
Comb H Lock Mode (Xb)	0, 1	1	1
Comb H Lock (Xc)	0 - 511	60	60
Comb H Sep 1 (Xd)	0 - 511	313	313
Comb H Sep 2 (Xe)	0 - 511	266	266
Comb Sub H Lock Mode (Xf)	0, 1	0	0
Comb Sub H Lock (X10)	0 - 511	70	70
Comb Sub H Sep 1 (X11)	0 - 511	313	313
Comb Sub H Sep 2 (X12)	0 - 511	266	266

### PIN CUSHION ADJUSTMENTS

Follow same procedure used for Sub adjustments.

#### Pin Cushion Adjustment Range and Default Levels

Adjustment	Range	Default Level	On-Set Value
H Position (D0)	0 - 31	16	16
V Size (D1)	0 - 63	31	30
V S Correction (D2)	0 - 7	4	4
V Lin Correction (D3)	0 - 15	14	15
E/W Trapezium (D4)	0 - 15	8	8
V AGC (D5)	0, 1	1	1
V Position (D6)	0 - 7	0	0
V Centering (D7)	0 - 127	63	63
V Centering DAC SW (D8)	0, 1	0	0
V BLK Start Phase (D9)	0 - 31	7	7
V BLK Stop Phase (Da)	0 - 31	14	14

#### Horizontal Centering (D0)

Tune in a crosshatch pattern. Enter serviceman mode and select Pin Cushion adjustments. Select horizontal position (D0) adjustment and adjust crosshatch pattern for correct horizontal centering.

#### Vertical Size (D1)

Tune in a crosshatch pattern. Enter serviceman mode and select Pin Cushion adjustments. Select vertical size (D1) adjustment and adjust crosshatch pattern for little over scan at the top and the bottom of the screen.

### Important Parts Information

- ▀ The parts listed here are those not usually available from a well-stocked supply cabinet or bin.
- ▀ Where items may be replaced with equivalent parts, several alternates are shown from participating vendors.
- ▀ On the parts lists, safety items are marked with a # to remind you that only exact replacements are recommended for these items.
- ▀ When ordering parts, state the model number, part number, and description.

### Obtaining Parts

Many of these parts are available from your local Sams authorized distributor or the manufacturer of the equipment. Call Sams for the name of your nearest distributor:

800-428-7267

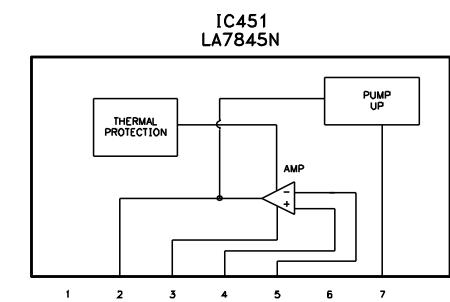

Or consult the Sams Annual Index for the address of the original equipment manufacturer.

### Participating Vendors

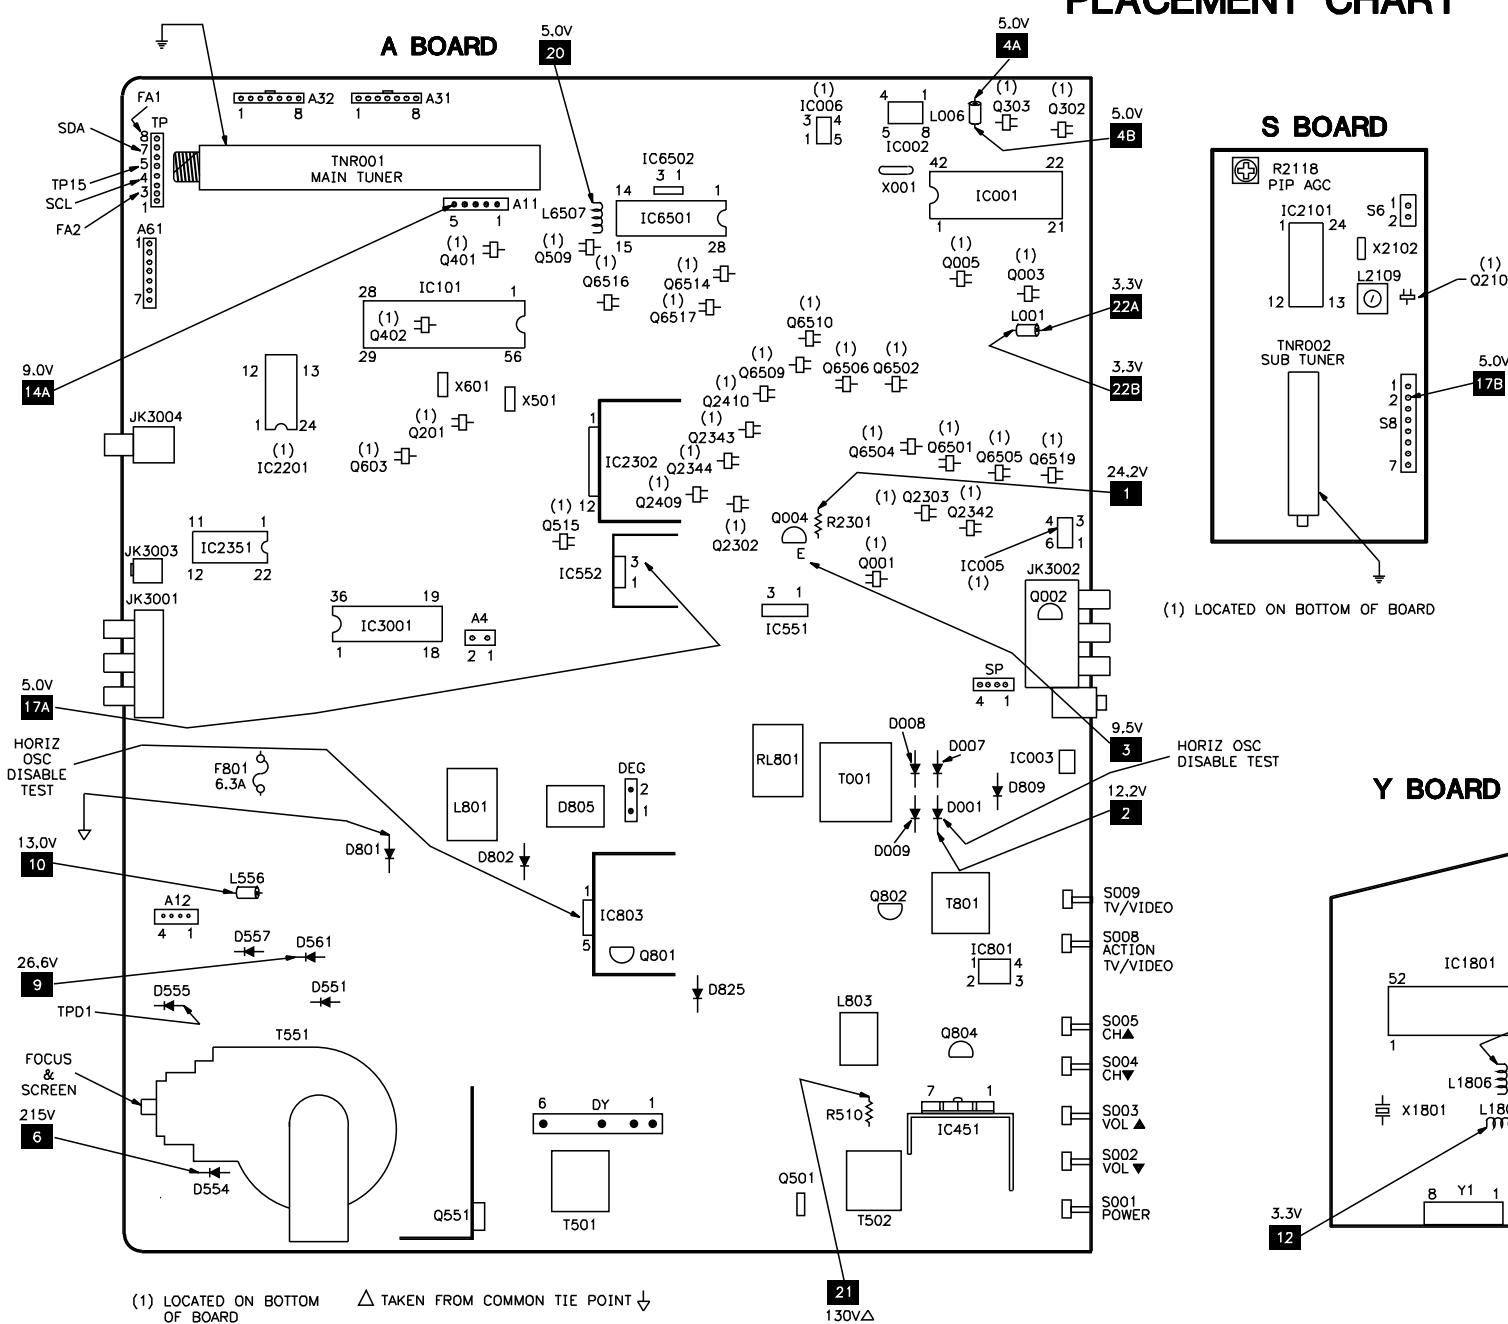

Information on test equipment and replacement parts is listed in these pages for the following participating vendors. Consult the Sams Annual Index for their current address.

- ▀ NTE Electronics, Inc. (NTE)
- ▀ Sencore, Inc.

### SCHEMATIC NOTES

- # For SAFETY use only equivalent replacement part, see parts list.
- Circuitry not used in some versions.
- - - Circuitry used in some versions.
- ↓ Ground
- Chassis ground
- △ Common tie point
- △ Taken from common tie point
- 3 Schematic CIRCUITTRACE® Voltage source tie point.
- A — Cabling: Heavy lines reduce use of multiple lines.

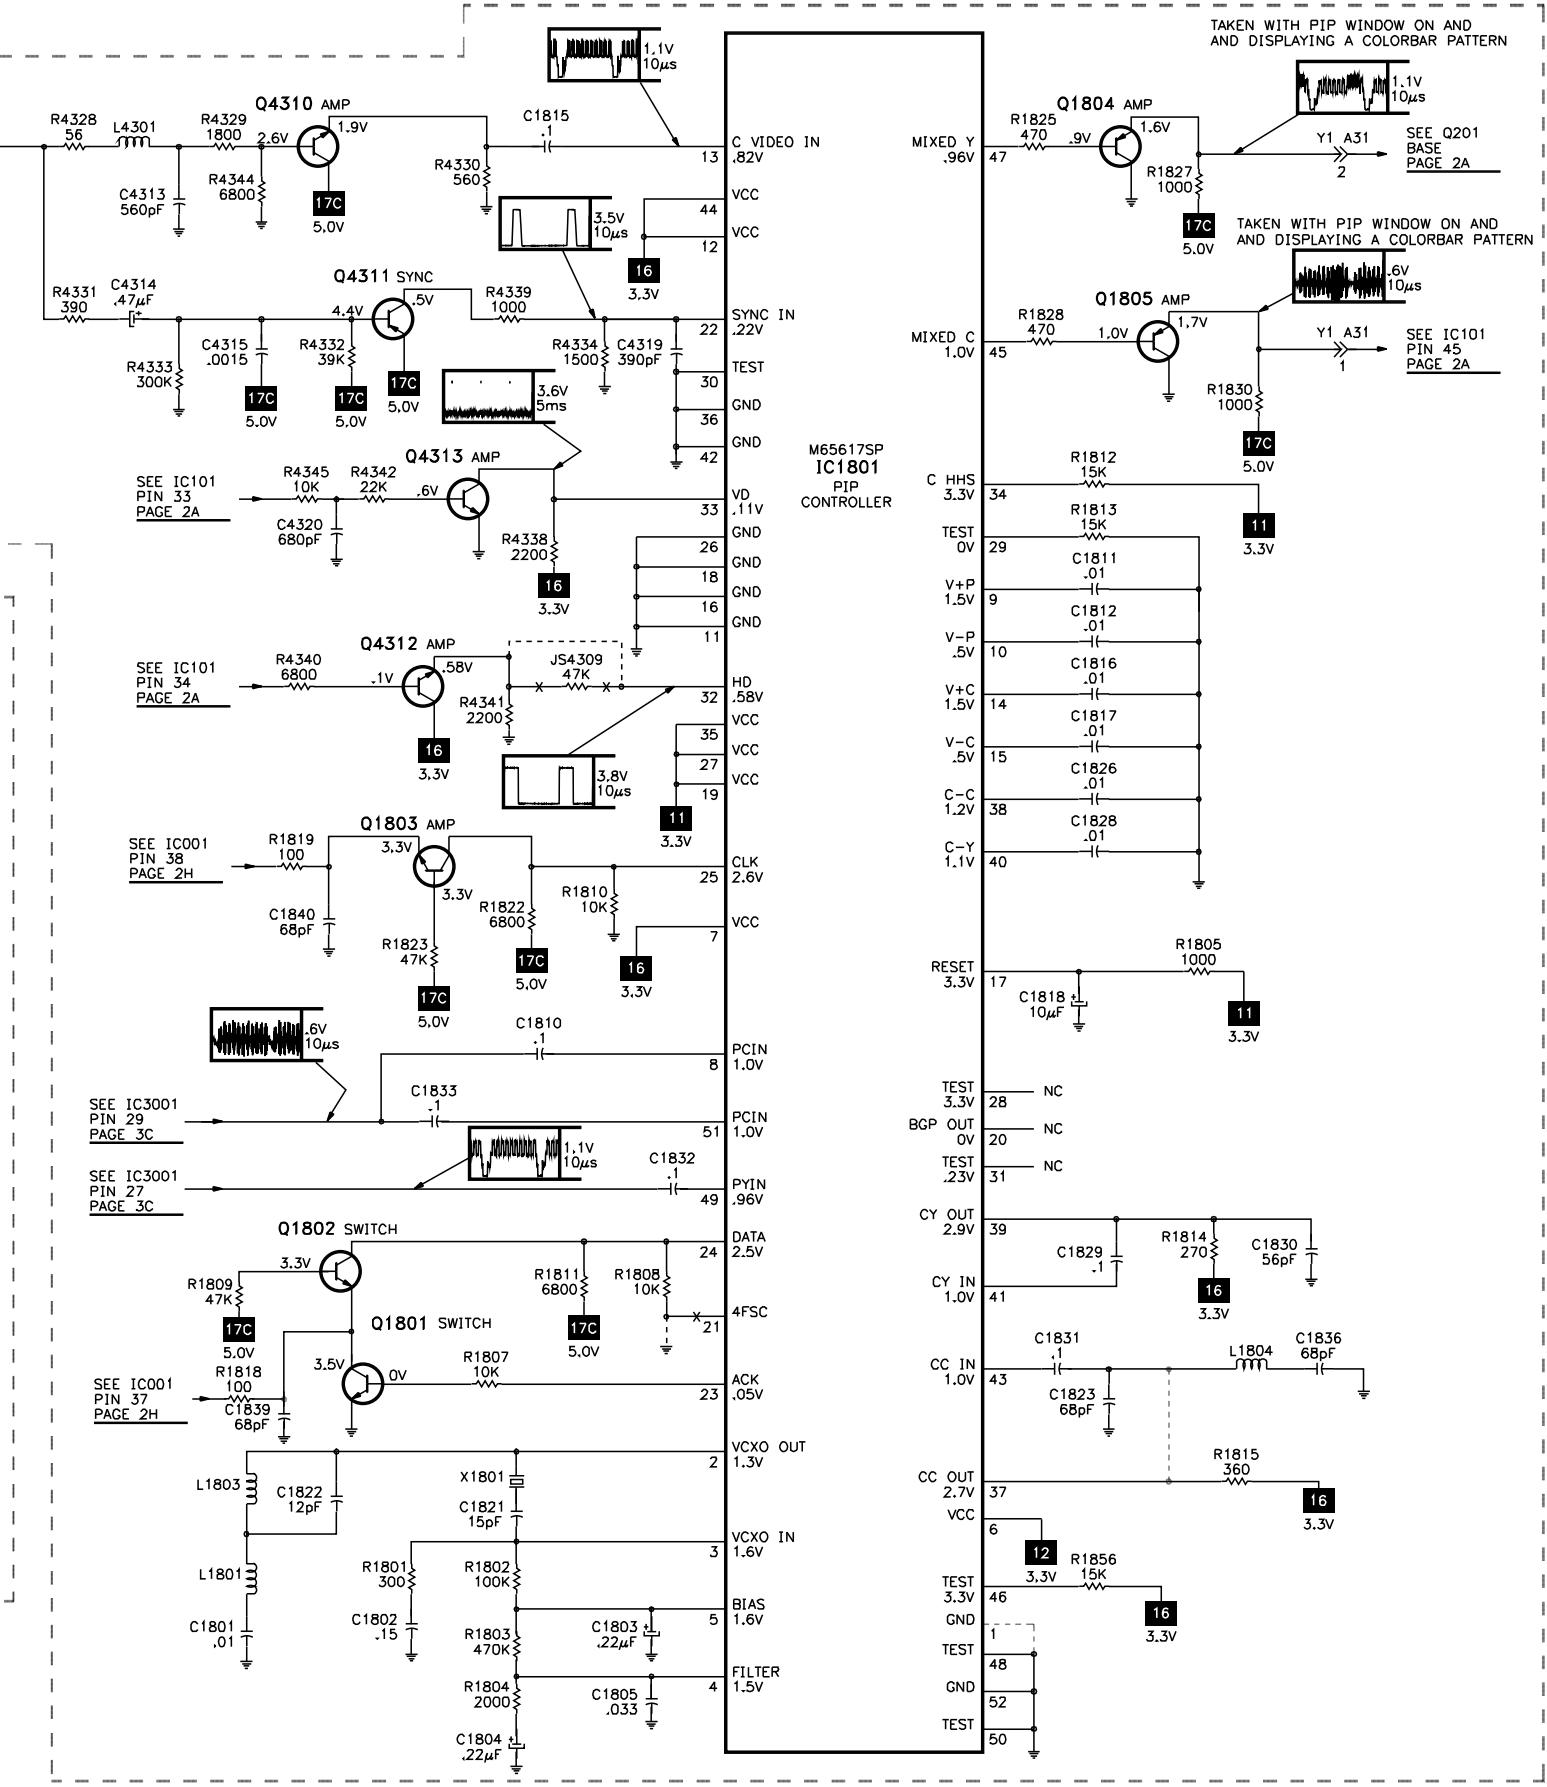

Waveforms and voltages are taken from ground, unless otherwise noted.  
 Waveforms taken with triggered scope and colorbar signal.  
 Waveform voltage is peak to peak. Timebase is per division. Waveforms shown at 10 divisions.  
 Supply voltages maintained as seen at input.  
 Voltages measured with digital meter and a 1000μV RF signal, with colorbar pattern applied to antenna terminal.  
 Controls adjusted for normal operation.  
 Capacitors are 50 volts or less, 5% or greater unless noted.  
 Electrolytic capacitors are 50 volts or less,  
 20% or greater unless noted.  
 Resistors are 1/2W or less, 5% or greater unless noted.  
 Value in ( ) used in some versions.  
 Measurements with switching as shown unless noted.  
 Rated voltage shown on zener diodes.
