<i>Safety Precautions</i>	1-2	<i>Block Diagrams</i>	1-25
<i>Instruction Book</i>	1-3	<i>Schematic Diagrams</i>	Insertion
<i>Description of Major ICs</i>	1-15	<i>Printed Circuit Boards</i>	Insertion
<i>Internal Connection of Display</i>	1-21	<i>Parts List (RX-316BK)</i>	2-1
<i>Disassembly Procedures</i>	1-22	<i>Parts List (RX-317TN)</i>	3-1

Safety Precautions

1. The design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacture of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (Δ) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal parts of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).

- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor.

Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

Troubleshooting

Use this chart to help you solve everyday operational problems. If there is any problem you cannot solve, contact your JVC service center.

PROBLEM	POSSIBLE CAUSE	SOLUTION
Display window does not light up	Power cord not plugged in	Plug power cord into AC socket
No sound from speakers	Speaker wires not connected	Check speaker wiring and reconnect if necessary
	SPEAKERS buttons not set correctly	Push the SPEAKERS buttons in or out as desired
	Incorrect SOURCE button was pressed	Select the correct audio source
Sound from one speaker only	Speaker wires not connected properly	Check speaker wiring and reconnect if necessary
	Balance control is set to one extreme	Adjust BALANCE control so that both speakers have sound
Continuous hiss or buzzing during FM reception	Incoming signal is too weak	Adjust antenna
	Station is too far away	Select a new station
	Incorrect antenna used	Check with your dealer to be sure you have the correct antenna
	Antenna not connected properly	Check connections
Occasional cracking noise during FM reception	Ignition noise from automobiles	Move the antenna farther from automobile traffic
Howling during record playing	Turntable too close to speaker	Move speakers away from turntable
Remote control does not work	There is an obstruction in front of the REMOTE SENSOR on the receiver	Remove the obstruction
	Batteries are weak	Replace batteries

Introduction

Thank you for purchasing the JVC RX-317TN receiver. We hope it will be a valued addition to your audio system. Be sure to read these instructions carefully before installing and operating the receiver.

Features

- Monitor recording quality
- Surround feature with two or four speakers
- Remote control
- Preset radio stations
- Easy to use

About This Manual

This manual gives you the basic information you need to install and use your receiver. It explains everything you need to know from turning the power switch on to basic troubleshooting. Please consult your JVC dealer if you have further questions about the receiver.

The following conventions are used in this manual:

- Controls, buttons, and connection points on the back of the receiver are indicated with capital letters, like this: POWER button, AUDIO jacks
- Messages that appear on the display window are indicated with capital letters and in quotes, like this: "TUNED"
- Instructions that you need to follow to get the correct results are labeled **IMPORTANT!**
- Helpful information is labeled **NOTE:**
- To avoid electric shock to yourself or damage to the receiver, read the information labeled **CAUTION!**

Switches and Controls

Familiarize yourself with the main switches and controls on your JVC RX-317TN receiver.

Receiver

- 1 ON/STANDBY switch
- 2 REMOTE SENSOR window
- 3 STANDBY/RECEIVED indicator
- 4 Display window
- 5 MASTER VOLUME control
- 6 SURROUND button
- 7 SOURCE SELECT buttons
- 8 PRESET buttons
- 9 FM MODE/MUTE button
- 10 MEMORY button
- 11 TUNING buttons
- 12 PHONES jack
- 13 SPEAKERS buttons
- 14 LOUDNESS button
- 15 TREBLE control
- 16 BASS control
- 17 MASTER VOLUME indicator
- 18 BALANCE control

Remote Control

- 1 POWER switch
- Turns on the Unit or puts it in standby mode
- 2 SOURCE SELECT buttons
- 3 TAPE 1 control buttons
- 4
 - Numeric button for only FM/AM
 - Control button for CD and CD Changer
- 5 VCR control button
- 6 SURROUND button
- 7 FADE MUTE button
- 8 VOLUME adjuster

Installation

This section explains how to connect the receiver to other stereo equipment and speakers, and how to connect the power supply.

⚠ Cautions

Before Installation

- ⚠ CAUTION! Before installing your receiver:
- Make sure your hands are dry.
 - Turn the power off to all components.
 - Read the installation instructions for all components you are going to connect.

Positioning the Receiver

- ⚠ CAUTION!
- Install the receiver in a location that is level and protected from moisture.
 - The temperature around the receiver must be between 23° and 104° F (–5° and 40° C).
 - Make sure there is good ventilation around the receiver. Poor ventilation could cause overheating and damage the receiver.

Making Power Connections

- ⚠ CAUTION!
- Do not handle the power cord with wet hands.
 - Do not pull on the power cord to unplug the receiver. Always grab the plug directly so as not to damage the cord.

Handling the Receiver

- ⚠ CAUTION!
- Do not insert any metal object into the receiver.
 - Do not disassemble the receiver or remove screws, covers, or cabinet.
 - Do not expose the receiver to rain or moisture.

Before Starting

Basic Connections

Connecting Stereo Components

Before connecting the receiver, read the following paragraphs carefully.

IMPORTANT! The left channel of any audio component must be connected to the left-channel jack of the receiver, and the right channel to the right-channel jack. If they are reversed, the stereophonic image will not be correct.

NOTE: To ensure correct connections, insert the red plug into the right channel.

Connect stereo component to the amplifier using cables with RCA PIN plugs. Connect the output jacks on a tape deck to the jacks marked IN (PLAY) on the amplifier, and the input jacks to those marked OUT (REC).

NOTE: Any turntables incorporating a small-output cartridge such as an MC (moving-coil type) must be connected to this amplifier through a commercial head amplifier or step-up transformer. Direct connection may result in insufficient volume.

NOTE: If a ground cable is fitted to your turntable, connect the ground cable to the AM LOOP terminal marked GND. In this case, do not disconnect the AM LOOP wire from the GND terminal.

COMPU LINK-3 Connections

COMPU LINK-3 SYNCHRO jacks on the back of the receiver connect the COMPU LINK remote control system. This system connects other JVC audio components with the receiver to make listening and recording more convenient. To use this system, attach the cables provided with your JVC components to the COMPU LINK-3 SYNCHRO jacks on the rear panel of each component. Then connect the cables to the receiver.

NOTES:

- *COMPU LINK-3 is an upgraded version of COMPU LINK-1. If your equipment provides COMPU LINK-1 jacks, you can still connect your equipment, but slight imperfections may result. Automatic Power ON/OFF, for example, may not always function properly.*
- *Refer to page 17 for details about the COMPU LINK remote control system.*

⚠ **CAUTION!** Do not connect Tape Deck 2 to the COMPU LINK jacks. It may cause the COMPU LINK system to malfunction.

Other Audio Connections

Use the socket on the back of the receiver to connect the power supply of any audio components. By pressing the POWER switch on the remote control, you can turn the receiver, and all connected components, on or off at the same time.

In the United States, AC outlets have a capacity of 180 watts.

⚠ **CAUTION!** Do not connect any components that consume more power than the capacity of the AC outlets. This capacity is indicated below the socket on the back of the receiver.

Before Starting

Connecting Speakers

Connecting Speakers

Up to four speakers (two sets) can be connected to the receiver. Connecting four speakers will allow you to use the built-in Surround feature.

Connect speakers to the SPEAKERS terminals on the back of the receiver. Use the wire supplied with the speakers.

To connect each speaker, follow these steps:

Step 1 Open each terminal on the back of the receiver and insert the end of the speaker wire, as shown.

Step 2 Close the terminals to clamp the speaker wires in place, as shown.

⚠ **CAUTION!** Use speakers with an impedance of 8 ohms.

Connecting an AM Antenna

Before Starting

One AM loop antenna is supplied with your receiver.

Basic Connections

To connect the AM loop antenna to the AM LOOP terminals, follow these steps:

- Step 1** Open each terminal and insert one of the two ends of the AM antenna wire.
- Step 2** Close the terminals to clamp the antenna wires in place.
- Step 3** Stand the AM loop antenna on its own base, as shown. Set it on any flat surface.

AM Outdoor Antenna

If your AM broadcast reception is unsatisfactory, you should connect an AM outdoor antenna in addition to the loop antenna. The antenna wire should be 16 to 40 feet (5 to 13 meters) long.

Connect one end of the outdoor single vinyl-covered antenna wire to the AM LOOP terminal marked AM EXT.

IMPORTANT! The AM loop antenna must be installed to receive AM broadcasts. Do not disconnect the loop antenna when installing an outdoor antenna.

IMPORTANT! Except for the connection, make sure no uninsulated antenna wire touches the rear panel of the receiver. Otherwise, the receiver might not pick up AM broadcasts.

Before Starting

Connecting an FM Antenna

A temporary FM antenna and cable is supplied with your receiver. If reception with this antenna is not satisfactory, you may consider purchasing a 300-ohm feeder-cable antenna or a 75-ohm coaxial-cable antenna:

CAUTION! Before connecting the new FM antenna, disconnect any other FM antenna.

Connecting the Temporary FM Antenna

To connect the supplied antenna, follow these steps:

- Step 1** Loosen the cap on the 300/75-ohm terminal on the back of the receiver.
- Step 2** Loosen the cap on the 300-ohm terminal on the back of the receiver.
- Step 3** Connect the antenna by inserting one wire behind each cap.
- Step 4** Tighten the caps on both terminals.

Connecting a 300-Ohm FM Antenna

To connect a 300-ohm feeder-cable antenna, use the same steps as for the temporary FM antenna.

Connecting a 75-Ohm FM Antenna

To connect a 75-ohm coaxial-cable antenna, follow these steps.

- Step 1** Unscrew the cap and bracket screw on the 300/75-ohm terminal. Insert the round antenna cable from below.
- Step 2** Make sure the shield braid on the cable contacts the bracket, and the center conductor of the cable contacts the 300/75-ohm terminal.
- Step 3** Tighten the bracket screws and the cap on the 300/75-ohm terminal.

IMPORTANT! Make sure the antenna conductors do not touch any other terminals on the receiver. This could cause poor reception.

Connecting the Power Supply

Connecting the Power

After checking all connections, insert the power cord plug into an outlet.

When the power supply is connected correctly, the POWER STANDBY indicator lights on front of the receiver. A small amount of power (3 watts) is consumed under these conditions even if the receiver is turned off. To shut off the power completely, unplug the power cord from the outlet.

⚠ CAUTION!

- Do not handle the power cord with wet hands.
- Do not pull on the power cord to unplug the receiver. Always grasp the plug directly so as not to damage the cord.
- Do not plug the power cord into a socket until all components are connected correctly.

IMPORTANT! If the power cord is disconnected or a power failure occurs, the receiver settings in memory are retained for 2 or 3 days.

Inserting Batteries into the Remote Control

The remote control requires two batteries (supplied). To insert batteries, follow these steps:

- Step 1** On the back side of the remote control, press down on the battery cover and slide it out.
- Step 2** Insert batteries. Make sure to observe the proper polarity: (+) to (+) and (-) to (-).
- Step 3** Slide the cover in.

Replacing Batteries

If the range or effectiveness of the remote control decreases, replace the batteries. Use two dry-cell batteries of the R6P (SUM-3)/AA (15F) type.

⚠ CAUTION! Follow these precautions to avoid leaking or cracking cells:

- Place batteries in the remote control so they match the polarity indicated (+ to (+) and (-) to (-).
- Use the correct type of batteries. Batteries that look similar may differ in voltage.
- Always replace both batteries at the same time.
- Do not expose batteries to heat or flame.

Operation Outline

Basic Operation Reference

1 Turn on the power

Push the POWER switch to turn on the receiver. The display lights:

NOTE: Pushing the POWER switch again turns off the power and lights the STANDBY light. A small amount of power (3 watts) is consumed and the STANDBY indicator is lit in the standby mode. To turn the power off completely, disconnect the power cord from the wall outlet.

2 Select speakers (page 15)

Use the SPEAKERS switch to choose between the two sets of speakers. To use your headphones, insert the headphone plug into the PHONES jack on the receiver.

3 Choose an audio source (page 12)

To choose an audio source, press one of the SOURCE SELECT buttons on the receiver or select one of the components on the remote control.

4 Operate the audio source (pages 17-19)

Refer to the manual provided with each component. If your JVC components are connected to the COMPU LINK jack of the receiver, you can operate them using the remote control.

5 Adjust volume and tone (pages 15-16)

Rotate the MASTER VOLUME control on the receiver or press the VOLUME button on the remote control to adjust volume. See page 15 for other ways to change the volume or tone.

Selecting the Audio Source

The receiver can receive input from compact discs, cassette tapes, turntables, or any audio source that you connect. You can select a source for either listening or recording.

Listening

Press one of the SOURCE buttons on the receiver or the remote control.

CD*	Listen to the CD player.
PHONO*	Listen to a record.
TAPE 1*	Listen to the tape deck connected to the TAPE 1 jacks.
VIDEO SOUND/TAPE 2	Listen to the tape deck connected to the TAPE 2 jacks.
FM*	Listen to an FM broadcast.
AM*	Listen to an AM broadcast.

IMPORTANT! The VIDEO SOUND/TAPE 2 button has a different function from other source selector buttons, because it allows you to monitor the quality of the recording. For more details, see Monitoring below.

NOTE: On the remote, when you press one of the SOURCE buttons marked above with an asterisk, the receiver automatically turns ON (even if it was OFF before).

Recording

The source being played is automatically selected as the source to be recorded. While recording, you can listen to the selected source at any desired volume and tone settings.

NOTE: Volume and Tone adjustments and the surround sound effect do not affect recording.

IMPORTANT! When recording from TAPE 2 to TAPE 1, press the VIDEO SOUND/TAPE 2 button and another button other than TAPE 1.

Monitoring

Using the Monitor feature, you can compare the sound quality of the source to the sound quality of the recording being made.

To use the Monitor feature while recording onto a cassette deck connected to the TAPE 2 jacks, follow these steps:

Step 1 Press the VIDEO SOUND/TAPE 2 button.

The "TAPE 2 MONITOR" light appears and you can listen to the sound of the cassette deck connected to the TAPE 2 jacks. You are now hearing the quality of the recording, not the quality of the source.

Step 2 Press the VIDEO SOUND/TAPE 2 button again.

This turns off the "TAPE 2 MONITOR" light, and the speakers play the previously selected source.

NOTE: If the cassette deck has three heads, you can hear the sound of the recording at the same time as it records on the tape.

Receiving an AM/FM Broadcast

To receive an AM/FM broadcast, select either AM or FM using the AM button or FM button. Then tune to the precise frequency using the TUNING buttons.

Tuning

Tune to the frequency of a desired station using the TUNING buttons. Pressing the right button increases the frequency, and pressing the left button decreases the frequency. Tapping the TUNING button once changes the frequency in steps of 10 kHz for AM and 0.1 MHz for FM.

There are two tuning modes: Manual and Automatic.

If you know the frequency of a desired station, hold down the TUNING button to start the frequency changing quickly. Release the TUNING button near the desired station and tap it repeatedly until you arrive at the correct frequency.

Manual Tuning

Automatic Tuning

If you want to scan frequencies for a desired station, hold down the TUNING button to start the frequency changing quickly. When you release the TUNING button, the frequency continues to change until it reaches a station.

When a station is correctly tuned, the "TUNED" light appears on the display window.

Once a tuned frequency is preset, it can be directly recalled using the TUNER buttons. For details, see page 14.

NOTE: When you use automatic tuning, weak stations are ignored. To pick up weak stations, use manual tuning.

IMPORTANT! If the receiver is tuned to a station but the "TUNED" light does not appear, try rotating the antenna for better reception.

Selecting an FM Reception Mode

Pressing the FM MODE/MUTE switch switches between these modes.

The "MUTE-AUTO" light appears on the display window. You hear either stereo sound or monaural sound, depending on the broadcast. If it is a stereo broadcast, the "STEREO" light appears. This mode is also useful for suppressing static "noise" between stations.

The "MUTE-AUTO" light disappears. You hear monaural sound even if a broadcast is in stereo. This mode is also useful when a stereo broadcast is noisy because of a weak signal.

NOTE: Using the Automatic Tuning mode, the sound of a broadcast with a weak signal may be muted. In this case, select the monaural mode.

Presetting

Presetting Tuned Frequencies

You can preset up to total 40 FM/AM radio stations by assigning channel numbers (1 through 40) to them. Once a station is preset, you can listen to it by entering the preset number using the PRESET buttons on the receiver, or the numeric buttons of the remote.

To use presetting to assign channel numbers to your favorite stations, follow these steps:

- Step 1** Tune to a station. If necessary, follow the procedure on page 13.
- Step 2** Press the MEMORY button.
The "MEMORY" light appears in the display window.
- Step 3** Using the PRESET buttons, enter a number (1 through 40). This number is the channel number you are assigning to the station.
- IMPORTANT!** You must enter the channel number while the "MEMORY" light is on. You have about 5 seconds to do this. If the light disappears before you enter the channel number, press the MEMORY button again.
- Step 4** While the preset channel number is flickering, press the memory button again. When the MEMORY light disappears and the channel number is displayed, presetting is completed.

To choose numbers from 1 through 40, press the +10 key and numeric button on the remote.

- | | |
|--------------|---------------------------------|
| To choose 17 | Press +10, then 7. |
| To choose 20 | Press +10, then 10. |
| To choose 25 | Press +10 twice, then 5. |
| To choose 40 | Press +10 three times, then 10. |

NOTE: You can also tune using the remote control. First press the AM or FM button on the remote, then enter the channel number using the numeric buttons on the remote.

Adjusting the Volume and Tone

Using the MASTER VOLUME Control

Muting the Sound

Selecting the Speakers

Listening to Headphones

Adjusting the Left-Right Balance

Adjusting the Volume

Use the MASTER VOLUME control to adjust the volume from the left and right speakers. Rotating the dial to the right increases the volume. The volume from the speakers and the headphones increases simultaneously.

NOTE: Volume can also be adjusted using the remote control. Press the VOLUME button marked + to increase the volume, or the VOLUME button marked - to decrease the volume.

CAUTION: Listening to extremely loud sound may damage your hearing. Be especially careful when using headphones.

Press the FADE MUTE button on the remote control to decrease the volume easily when you receive a phone call or a visitor.

IMPORTANT! If you are listening at very high volume, you may need to press FADE MUTE a second or third time to reduce volume completely.

Pushing in SPEAKER button 1 or 2 activates that pair of speakers. Pressing either button again deactivates that pair of speakers. When the button is in, that pair is activated. You can listen to both pairs, pair 1, pair 2, or neither pair.

IMPORTANT! If only one set of speakers is connected, pressing "in" both speaker buttons will produce no sound.

Insert the headphone plug into the PHONES jack. To limit sound to the headphones (no sound from the speakers), press SPEAKER buttons 1 and 2 to deactivate all speakers.

CAUTION: To avoid hearing damage, turn the volume down before plugging in the headphones, then gradually increase the volume.

Use the BALANCE control to adjust the balance between the left and right channels. Rotating the dial to the right decreases the left-channel volume, and rotating it to the left decreases the right-channel volume. The BALANCE control affects both sets of speakers and the headphones.

Adjusting Bass and Treble

Enjoying the Surround Sound Effect

Adjusting the Tone

Use the BASS control to adjust low pitches and the TREBLE control to adjust high pitches. Turn either control to the right for intensified pitch. Set both controls at the FLAT position for normal listening.

Press the SURROUND button to create this movie-theater effect. The SURROUND indicator lights. Press the SURROUND button again to deactivate the surround feature. The SURROUND indicator turns off.

IMPORTANT! The Surround feature has no effect on monaural (non-stereo) sources.

NOTE: Two set of speakers are recommended to produce an ideal surround effect, but you can use the feature with only one set of speakers connected.

Listening at Low Volume (Loudness)

LOUDNESS

ON OFF

Human ears are not sensitive to bass at low volume. To compensate for this, the loudness function automatically boosts the bass level as you lower the volume.

To use the loudness function, press the LOUDNESS button.

To turn the function off, press the LOUDNESS button again.

Operating Audio Components

COMPU LINK Remote Control System

The COMPU LINK remote control system lets you operate the receiver and JVC components from the remote supplied with this receiver. Control signals for JVC audio components are preset in the receiver's remote control.

Connecting the COMPU LINK-3 SYNCHRO jacks on the back of the receiver will allow you to use the four functions below.

You can control all components via the REMOTE SENSOR on the receiver using the receiver's remote control. For details, see page 18.

IMPORTANT! Point the remote control directly at the REMOTE SENSOR on the receiver.

Remote Control

Automatic Source Selection

When you press play on a component or the remote, the component begins playing immediately. On the other hand, if you select a new source on the receiver or the remote, the component begins playing immediately, but the previously selected source continues playing without sound for a few seconds.

Synchronized Recording

Synchronized recording means the tape deck starts recording as soon as a CD or record begins playing.

To use synchronized recording, follow these steps:

Step 1 Put a tape in the deck, and a disc in the CD player or on the turntable.

Step 2 Press the REC and PAUSE button on the tape deck at the same time. This puts the tape deck in the REC/PAUSE state.

IMPORTANT! If you do not press the REC button and PAUSE button together, the synchronized recording feature will not operate.

Step 3 Press the PLAY button on the CD player or turntable.

As soon as the disc starts playing, the tape deck starts recording. When the disc ends, the tape deck switches back to the REC/PAUSE mode, and stops 4 seconds later.

NOTES:

- During synchronized recording, the CD or PHONO button is activated. Other SOURCE buttons are disabled to prevent recording failure.
- If your CD player is operated in the PROGRAM mode, a 4-second mute is recorded between tracks to enable the music scan feature of your tape deck to work.
- If the power of any component is shut off during synchronized recording, the system will not operate properly. In this case, you must start again with step 1.

Automatic Power ON/OFF

The CD player and cassette deck are turned on and off along with the receiver. When you turn on the receiver (using either the remote or the receiver's POWER switch), the CD player or cassette deck will turn on automatically, depending which component was previously selected.

NOTE: This function has been added to COMPU LINK-3 (Enhanced COMPU LINK), an upgraded version of COMPU LINK-1. Refer to your JVC component manual for details.

Using the Remote Control

By connecting the COMPU LINK jack to this receiver, you can operate the audio stereo component with this receiver's remote control. In addition, if your VCR is a JVC product, you can operate it with this receiver's remote control.

NOTE: The VCR does not work with the COMPU LINK remote control system. When you operate the VCR, you must aim the remote control at the VCR instead of the receiver.

Operating the Component Already Selected

CD Player

Cassette Deck

Select a source with the SOURCE SELECT buttons on the remote control. Operate that source using the buttons below the SOURCE SELECT buttons.

IMPORTANT! If you choose a source on the receiver directly, the remote control will not operate that source. To operate a source with the remote control, the source must be selected using the remote control.

IMPORTANT! When you select CD, TAPE 1, FM, AM or PHONO on the remote control, the component will turn on and start playing automatically.

After pressing the CD button, you can perform the following operations on the remote:

- ▶ Starts playing
- ◀◀ Skips to the beginning of the previous track
- ▶▶ Skips to the beginning of the next track
- Stops playing
- || Stops playing temporarily. To release it, press ▶
- ◀◀ Moves backward quickly during play
- ▶▶ Moves forward quickly during play

After pressing or not pressing the TAPE 1 button, you can perform the following operations on the remote:

- ▶ Starts playback
- Stops operation
- || Stops playback or recording temporarily. To release it, press ▶
- ◀◀ Fast wind the tape from right to left
- ▶▶ Fast wind the tape from left to right
- || Enter record-standby mode

Operating the Component Not Currently Selected

VCR

When you want to operate one component while listening to another component (e.g., recording from a CD), use the buttons in the CONTROL section of the remote control. The CONTROL buttons allow you to use the operation buttons for the new component without affecting the component already playing.

- ▶ Starts playback
- Stops operation
- ◀◀ Rewinds video tape
- ▶▶ Fast winds video tape

NOTE: You can also turn the VCR and TV on and off by pressing the VCR or TV button in the POWER section of the remote control.

IMPORTANT! Aim the remote control at the VCR or TV, not at the receiver.

CD Player-Changer

After pressing the CD DISC button in the CONTROL section of the remote, you can perform the following operations on the remote:

1-6, P Select the number of the disk installed in the CD player-changer. Then continue to operate the CD player as shown on page 18.

Specifications (RX-317TN)

Amplifier	Output Power	110 watts per channel, min. RMS, both channels driven into 8 ohms from 40 Hz to 20 kHz, with no more than 0.9% total harmonic distortion.
	Total Harmonic Distortion (8 ohms, 1 kHz)	0.08%* at 90 watts output
	Frequency Response (8 ohms)	
	PHONO	20 Hz to 20 kHz (±1 dB)
	CD / TAPE 1 / TAPE 2	20 Hz to 20 kHz (±1 dB)
	Signal-to-Noise Ratio ('66 IHF / '78 IHF)	
	PHONO	70 dB / 78 dB (REC OUT)
	CD / TAPE 1 / TAPE 2	91 dB / 80 dB
	RIAA Phono Equalization	±1 dB (20 Hz to 20 kHz)
	Input Sensitivity / Impedance (1 kHz)	
	PHONO	2.5 mV / 47 k ohms
	CD / TAPE 1 / TAPE 2	200 mV / 47 k ohms
	Output Level	
	TAPE 1 / TAPE 2	200 mV
	Tone Control Range	BASS (at 100 Hz) ±8 dB TREBLE (at 10 kHz) ±8 dB
	Loudness Control	+4.5 dB (at 100 Hz) (Volume control at -30 dB)
FM Tuner (IHF)	Tuning Range	87.5 MHz to 108.0 MHz
	Usable Sensitivity	10.8 dBf (0.95 µV / 75 ohms)
	50 dB Quieting Sensitivity	
	Monaural	16.3 dBf (1.8 µV / 75 ohms)
	Stereo	38.3 dBf (22.5 µV / 75 ohms)
	Signal-to-Noise Ratio (IHF-A weighted)	
	Monaural	80 dB at 85 dBf
	Stereo	73 dB at 85 dBf
	Total Harmonic Distortion	
	Monaural	0.15 % at 1 kHz
	Stereo	0.2 % at 1 kHz
	Stereo Separation at REC OUT	40 dB at 1 kHz

AM Tuner

Capture Ratio	1.5 dB (10 mV / 300 ohms)
Alternate Channel Selectivity	60 dB: (±400 kHz)
Frequency Response	30 Hz to 15 kHz: (+0.5 dB, -3 dB)
Tuning Range	530 kHz to 1,710 kHz
Usable Sensitivity	
Loop antenna	300µV/m at 1,000 kHz
External antenna	30µV at 1,000 kHz
Signal-to-Noise Ratio	50 dB (100mV / m, at 1,000 kHz)

General

Power Requirements	AC 120V [~] , 60 Hz
Power Consumption	220 watts, 310 VA (at operation) 3 watts, 4 VA (at standby mode)
Dimensions (W x H x D)	17 ³ / ₁₆ x 5 x 14 ¹ / ₁₆ inches 435 x 126 x 356 mm
Mass	18.5 lbs (8.4 kg)

*Measured by JVC Audio Analysis System.

Supplied Accessories

Remote control unit (RM-SR317U)	1
Batteries R6P (SUM-3)/AA (15F)	2
FM feeder antenna	1
AM loop antenna	1

Designs and specifications subject to change without notice.

Specifications (RX-316BK)

Amplifier	Output Power	110 watts per channel, min. RMS, both channels driven into 8 ohms from 40Hz to 20kHz, with no more than 0.9% total harmonic distortion.	Capture Ratio (IHF)	1.5dB (10mV/300 ohms)
			Alternate Channel Selectivity (IHF/DIN)	60dB: (± 400 kHz) / 55dB (± 300 kHz)
			Frequency Response	30Hz to 15kHz: (+0.5dB, -3dB)
	Total Harmonic Distortion (8 ohms, 1kHz)	0.08%* at 60 watts output		
	Frequency Response (8 ohms)		AM Tuner	Tuning Range
	PHONO	20Hz to 20kHz (± 1 dB)		531kHz to 1,608kHz / 530kHz to 1,600kHz (selectable)
	CD / TAPE1 / TAPE2	20Hz to 20kHz (± 1 dB)		Usable Sensitivity
	Signal-to-Noise Ratio (66 IHF/DIN)			Loop antenna
	PHONO	70dB / 66dB		300 μ V/m / 600 μ V/m**

■ LC7218 (IC102) : PLL Synthesizer

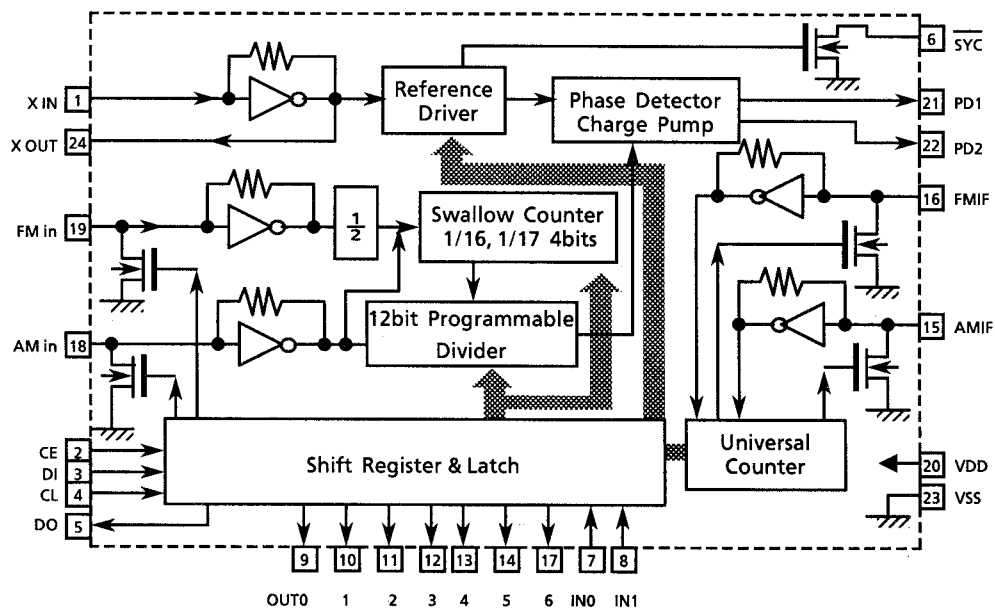

1. The main function descriptions

- (1) It makes the local oscillation frequency by the control data from IC901.
- (2) Decode the control signal and transmit the signal for receiving conditions.
- (3) For the best tuning, count the internal-frequency and transmit the data to IC901.

2. Terminal Layout

3. Block Diagram

4. Pin Functions

Pin No.	Symbol	I/O	Functions
1,24	X in, X out	I/O	Crystal oscillator (7.2MHz).
2	CE	I	Fix the chip enable to "H" when inputting (DI) and outputting (DO) the serial data.
3	DI	I	Receive the control data from the controller (IC801).
4	CL	I	This clock is used to synchronize data when transmitting the data of DI and DO.
5	DO	O	Transmit the data from LC7218 to the controller which is synchronized with CL.
6	SYC	—	Not used.
7	TUNED	I	Receive the tuned signal from IC104 (LA1266A).
8	STOP IN	—	Connected to GND
9	POWER	—	Not used.
10	QSC	—	Not used.
11	MONO	O	It is "H" on FM-monaural, "L" on FM-Stereo.
12	FM	O	It is "L" on FM mode.
13	MW	O	It is "L" on MW mode.
14	LW	O	It is "L" on LW mode.
15	AM-IF	I	Universal counter input for AM-IF from IC104 (LA1266A).
16	FM-IF	I	Universal counter input for FM-IF from IC104 (LA1266A).
17	IF REQ	O	Output the "IF-signal request" to IC104 when the pin-7 (tuned in) goes to "H".
18	AM OSC	I	Input the local oscillator signal of AM.
19	FM OSC	I	Input the local oscillator signal of FM.
20	V _{DD}	—	This is a terminal of power supply.
21	PD1	O	PLL charge pump output: When the local oscillator signal frequency is higher than the reference frequency high level signals will output. When it is lower than the reference frequency, low level signals will output. When it is same as reference frequency signals, it will be floating.
22	PD2	—	Not used.
23	V _{SS}	—	Connected to GND

■ LA1266A (IC104) : FM AM IF AMP & detector

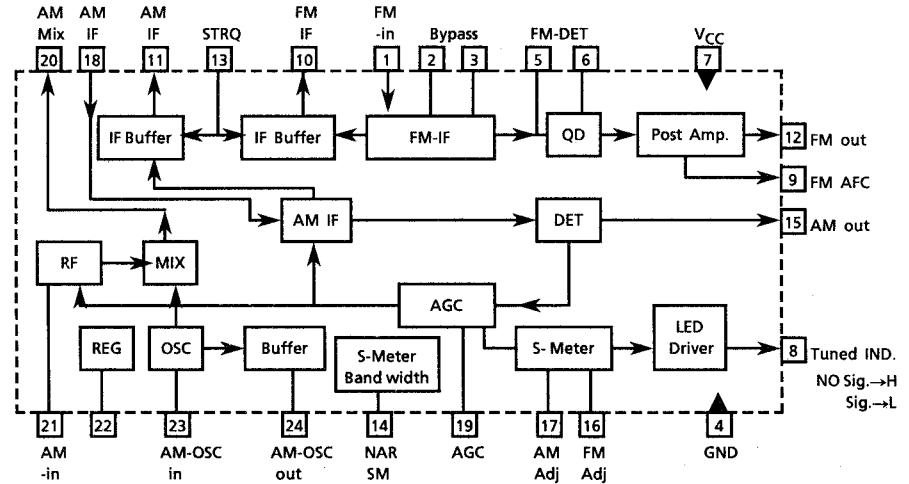

1. The main function descriptions

- (1) Amplify and detect of FM intermediate frequencies.
- (2) It has local oscillator and mixer for AM, and detect the AM-IF signal.

2. Top View

FM-in	1	24	AM-OSC out
Bypass	2	23	AM-OSC
Bypass	3	22	V.ref
GND	4	21	AM-in
FM-DET	5	20	AM-Mix
FM-DET	6	19	AM-AGC
V _{CC}	7	18	AM-IF
Tuned	8	17	AM Adj.
FM-AFC	9	16	FM Adj
FM-IF	10	15	AM out
AM-IF	11	14	NAR SM
FM-out	12	13	STRQ

3. Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	FM in	I	This is an input terminal of FM IF Signal.
2,3	Bypass	--	Bypass of FM IF Amp.
4	GND	--	This is the device ground terminal.
5,6	FM DET	--	FM detect transformer.
7	V _{CC}	--	This is the power supply terminal.
8	Tuned	O	When the set is tuning ,this terminal become "L".
9	FM AFC	O	This is an output terminal of voltage for FM - AFC.
10	FM IF out	O	When the signal of IF REQ of IC102(LC7218) applied to pin17, the signal of FM IF does output.
11	AM IF out	O	When the signal of IF REQ of IC102(LC7218) applied to pin17, the signal of AM IF does output.
12	FM out	O	FM detection output.
13	STRQ	I	The IF-signals come out from pin10 (FM-IF) or pin11 (AM-IF) while this terminal going to "High".
14	NAR SM	--	Control the Band-width of signal meter.
15	AM out	O	AM detection output.
16	FM Adj	--	For adjust the stop level (or mute level) of FM.
17	AM Adj	--	For adjust the stop level (or mute level) of AM.
18	AM-IF	I	Input of AM IF Signal.
19	AM-AGC	I	This is an AGC voltage Input terminal for AM.
20	AM-MIX	O	This is an output terminal for AM mixer.
21	AM-IN	I	This is an input terminal for AM RF Signal.
22	V.REF	--	Register value between pin9 and pin22 desides the frequency width of the input signal.
23	AM-OSC	--	This is a terminal of AM Local oscillation circuit.
24	AM-OSC out	O	AM Local Oscillation Signal output.

■ LA3401 (IC105) : FM MPX Detector

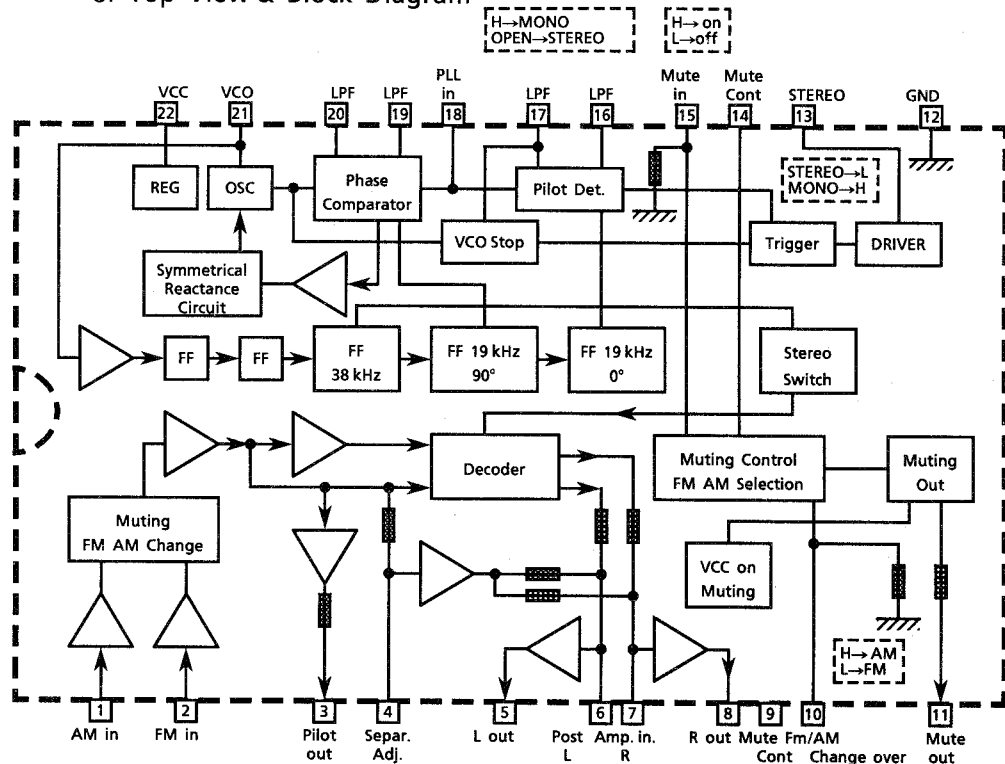

1. The main function descriptions

- (1) Detect the FM Multiplex Signal (Stereo signal).
- (2) When receiving FM Stereo Signal, it outputs the signal for indicator.
- (3) AM / FM Audio Amplifier.

2. Terminal Layout

3. Top View & Block Diagram

4. Pin Function Description

Pin No.	Symbol	I/O	Functions and Operations
1	AM in	I	This is an input terminal for AM detection signal.
2	FM in	I	This is an input terminal for FM detection signal.
3	Pilot out	O	Output of MPX pilot signal (Connect to Pin18).
4	Sepa. Adj.	--	Separation adjustment.
5	L. out	O	Left channel signal output.
6	L	O	Reversal output of Pin5.
7	R	O	Reversal output of Pin8.
8	R out	O	Right channel signal output
9	Mute Cont	--	The mute time is controlled by the connected capacitor when turning the power switch on.
10	FM / AM	I	Change over the FM / AM input. "H" : AM, "L" : FM
11	Mute out	---	Not use
12	GND	--	Ground terminal.
13	Stereo	O	Stereo indicator output. Stereo : "L", Mono : "H"
14	Mute Cont	--	The mute time is controlled by the connected capacitor when changing over the FM / AM .
15	Mute in	I	Mute signal input."H" : Mute on, "L" : Mute off.
16	LPF	--	Low pass filter of pilot detector.
17	LPF	--	While this terminal goes to "H", the VCO stop.
18	Pilot in	I	PLL input.
19	LPF	--	Low-pass filter of PLL.
20	LPF	--	Low-pass filter of PLL.
21	VCO	I	Voltage controlled oscillator terminal.
22	VCC	--	Power supply.

■ TC9164N (IC321) : Analog Switch

1. Functions

These analog switches are controlled by 14 bit serial date from computer for selecting the source.

2. Terminal Layout & Block diagram

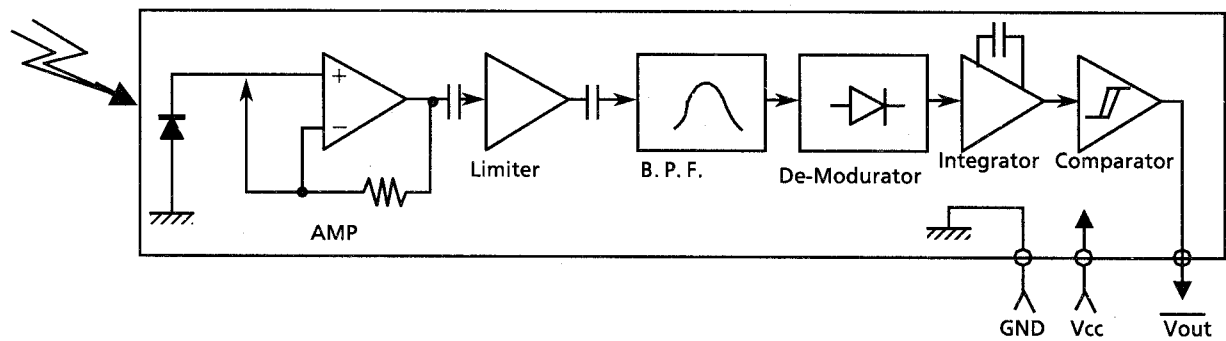

3. First 10bits are used to source select. Last 4bits are chip select. The switches (S1~S8) are connected to common terminals (COM1~COM3) according to the DATA from computer.

	Switch Select bit								CH1 CH2 (R-S1~S8)(L-S1~S8)		Chip Select bit			
	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12	S13	S14
TC9164N	The switch is ON when the data is "1".										0	1	0	0

■ PST600E (IC402) : Reset IC

■ NJH32H380A (IC402) : Remocon Module IC

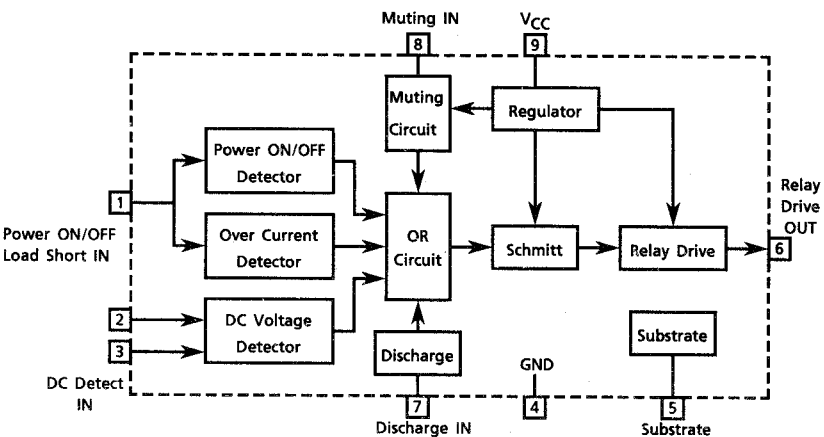

■ LB1639 (IC361) : Motor Driver

IN 1	IN 2	OUT 1	OUT 2	MOTOR
H	L	H	L	CLOCKWISE
L	H	L	H	COUNTER-CLOCKWISE
H	H	OFF	OFF	WAITING
L	L	OFF	OFF	WAITING

■ TA7317P (IC901) : PROTECTOR

Internal Connections of the FL Display

■ ELU0001-143 : FL401

Disassembly Procedures

(1) Removing the Top Cover

1. Remove the 4 screws fastening both sides of the Top Cover, and the 2 screws fastening the rear sides.
2. Remove the Top Cover.

(2) Removing the Front Panel

1. Remove the 3 screws (A) fastening top of the Front Panel, and the 3 screws (E) fastening bottom of the Front Panel.
2. Disconnect the connectors.
(P101,P702,P806,PA807,PA703,P805)
3. Remove the master volume knob.
4. Remove the nut fastenning the master volume .
5. Remove the Front Panel.

Fig 1. Top View

(3) Removing the Bottom Cover

1. Remove the 17 screws (E) .
2. Remove the Bottom Cover.

(4) Removing the Tuner P.C. Board

1. Disconnect the connectors.(P101,P103)
2. Remove the 6 screws (B), (C) and (D), and take it out.

Fig 2. Rear View

Fig 3. Bottom Cover

ADJUSTMENT PROCEDURES**■ Tuner section**

Tuning range

Area	Range	
	MW (Kz)	FM (Mz)
U.S.A. , Canada, Universal	522~1629	87.5~108

(1) Tuning Voltage

Confirm the voltages in the table at TP101.

FM Tuning voltage (Unit: V)

Area	Frequency	
	87.5MHz	108MHz
U.S.A. , Canada, Universal	1.6 ± 1.0	8.0 ± 1.0

AM Tuning voltage (Unit : V)

Area	Frequency (MW)						
	522KHz	530KHz	531KHz	1600KHz	1602KHz	1629KHz	1710KHz
U.S.A. , Canada	—	0.9 ± 0.2	—	—	—	—	8.0 ± 0.8
Universal (Channel space 9kHz)	—	—	0.9 ± 0.2	—	7.2 ± 0.7	—	—
Universal (Channel space 10kHz)	—	0.9 ± 0.2	—	7.2 ± 0.7	—	—	—

(2) FM Center meter

Receive a broadcast by using the function of 'AUTO STOP'.

Adjust T105 (Detector coil) so that the voltage at TP102 becomes $0 \pm 1.5\text{mV}$.**(3) MW Tracking**

Adjust T101 (Antenna coil) to obtain the best receiving sensitivity on 603kHz or 600kHz.

Adjust TC105 (Antenna trimmer) to obtain the best receiving sensitivity on 1404kHz or 1400kHz.

■ Power Amplifier section

Idling Current

- (1) Set the volume control to minimum during this adjustment.
- (2) Turn R751 and R752 fully counterclockwise before the power is switch on.
- (3) Always start from cold, and allow 5 minutes to warm up before adjustment.
If the heatsink is already warm from previous use the correct adjustment can not be made.
- (4) Connect a DC voltmeter to R787 resistor's leads for left channel, or to R788 for right channel.
- (5) Adjust R751 for left channel, or R752 for right channel, so that the DC voltmeter becomes 2mV ~ 3mV.
