SAFETY PRECAUTIONS

SERVICE WARNING

Only qualified service technicians who are familiar with safety checks and guidelines should perform service work. Before replacing parts, disconnect power source to protect electrostatically sensitive parts. Do not attempt to modify any circuit unless so recommended by the manufacturer. When servicing the receiver, use an isolation transformer between the line cord and power receptacle.

GENERAL GUIDELINES

Perform a final SAFETY CHECK before returning receiver to customer. Check repaired area for poorly soldered connections, and check entire circuit board for solder splashes. Check board wiring for pinched wires or wires contacting any high wattage resistors. Check that all control knobs, shields, covers, grounds, and mounting hardware have been replaced. Be sure to replace all insulators and restore proper lead dress.

POWER CONSUMPTION

Power Consumption: 180W @ 100V-240VAC 50/60Hz

Note: Use an appropriate sized Variac and/or Isolation Transformer during servicing.

The listing of any available replacement part herein in no case constitutes a recommendation, warranty, or guarantee by SAMS Technical Publishing LLC, as to the quality and suitability of such replacement part. The numbers of the listed parts have been compiled from information furnished to SAMS Technical Publishing LLC, by the manufacturers of the specific type of replacement part listed.

Reproduction or use, without express permission, of editorial or pictorial content, in any manner, is prohibited. No patent liability is assumed with respect to the use of the information contained herein.

NOVEMBER 2010 SET 5610

MISCELLANEOUS ADJUSTMENTS

Entering Factory Service Menu

Turn the TV OFF, press the Volume down key on the remote and the Volume down key on the TV's keyboard simultaneously for approximately 10 seconds until the TV turns ON. When the menu is displayed use the Up/Down keys to select an item and use the Left/Right keys to adjust values. Press the "Clear" key on the remote or select "Go Back" in the menu to exit the Factory Service Menu

Note: Record original values before adjusting any values.

To Exit Factory Service Menu

Press the "Clear" key on the remote or select "Go Back" in the menu to exit the Factory Service Menu.

Main Menu Items

Dealer Service Menu: Shows current Software Version loaded in the instrument.

Go Back: Returns to the previous menu.

Test Pattern: Menu will bring up color test screens.

Speaker Test: Press OK for a 5 second test tone.

Operating hours: Shows the number of operating hours.

NVM Initialize: Resets all customer Volatile Memory settings to factory defaults. Press OK key to start the process.

Reset Operating Hours: Resets operating hours to 0.

Current Software Info: Displays the current software version.

Picture: Customer Picture Menu.

Video Alignment: Video Alignment Menu.

Clear RRT: Clears the Regional Ratings Table. Select OK to clear the table.

Using the Test Pattern Menu

The Test Pattern Menu will display either a multiple color bar or a flat color screen. Each display will be visible for approximately 5 seconds.

Use the Up/Down Arrow on the remote to select the Test Pattern from the menu. Then use the OK key on the remote to enter the next menu. Select Go Back to return to the previous menu.

Select Single Color to bring up two options: Manual or Automatic

Under Manual, select which color to display (Red, Green, Blue, White or Black). Press the OK key on the remote to display the pattern.

Under Automatic, select OK to start the automatic scrolling though the different color screens (Red, Green, Blue, White or Black). Press the OK key to stop scrolling.

Press Go Back to find Multiple Color in the menu then press OK to display multiple bands of color.

Software Upgrade

Software upgrades are installed by the use of a generic USB device. Specific instructions related to software updates will be released within the software data package.

Local Upgrades/Applications

Checks for software upgrades, then initiates the upgrade process.

Current Software Info

Shows date and version of the software.

Video Alignment

The Cut Off alignment is used to define the color coordinates for low level luminance.

The White Point is used to define the color coordinates for bright luminance.

This alignment must be completed using Line Input (CVBS).

Start Video Alignment by entering the Factory Service Mode and select Video from the menu, then select Normal from the Color Temperature sub-menu.

Note: It is only necessary to perform the Cut Off and White Point Alignments with the Color Temperature set to the Normal position. The values for Cool and

Warm are interpolated based on the Normal settings.

Insert a grey test pattern with a 10 to 20 Nits luminance level.

Use a Color TV Analyzer to measure the coordinates at the center of the screen. Adjust Red, Green, Blue Offset for $x=0.280 \pm 5\%$, $y=0.290 \pm 5\%$.

Insert a 50IRE (or 150 nits) grey test pattern.

Measure the coordinates at the center of the screen. Adjust Red, Green, Blue Gain for $x=0.280 \pm 5\%$, $y=0.290 \pm 5\%$.

Note: It may be necessary to switch between the Cut Off and White Point Alignments in order to achieve the proper alignment.

Exit the Factory Service Menu by pressing the Clear key on the remote.

Brightness Alignment

Enter the Factory Service Menu.

Select Video from the menu then select Brightness.

Insert a Pluge test pattern thru the RF input with a 2% setup background showing a 0% and 4% bar.

Adjust the Brightness so that the 0% bar is invisible with the 4% bar visible.

Note: Record original values before adjusting any values.

Exit the Factory Service Menu by pressing the Clear key on the remote.

Peak White Adjustment

The Peak White Alignment must be completed to the following standards.

Enter the Factory Service Menu.

Select Video from the menu then select Peak White.

Input a test pattern with a 100% white centered pad on a dark background.

Using a color TV Analyzer measure the luminance level (Y[nit]) of the white pad.

Adjust with the Scaling Contrast and the Light Output Level (PW Level) for 400 Nits +20%/-10%.

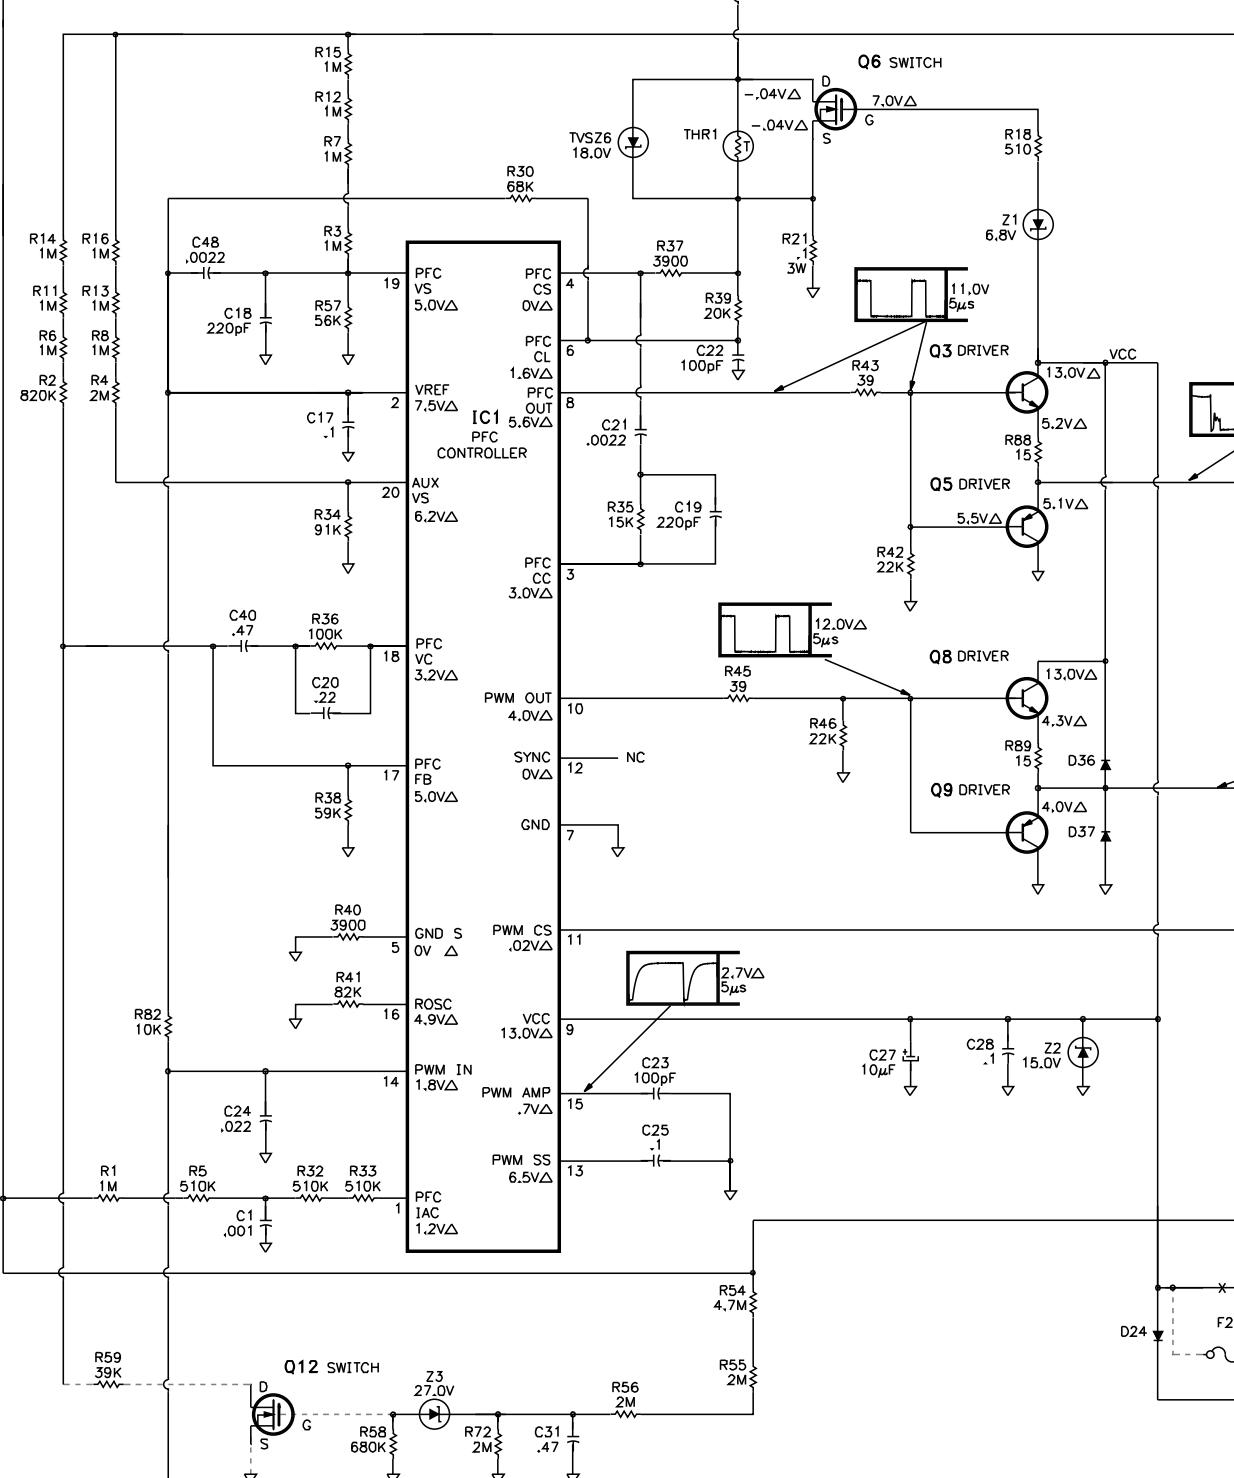

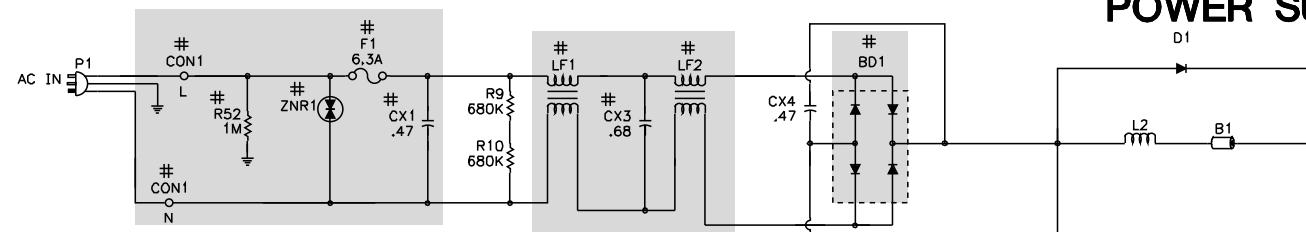

Exit the Factory Service Menu by pressing the Clear key on the remote.

SCHEMATIC NOTES

For SAFETY use only equivalent replacement part, see parts list.

—*— Circuitry not used in some versions.

- - - Circuitry used in some versions.

↓ Ground

—m— Chassis ground

↓ Common tie point

△ Taken from common tie point

3 Schematic CIRCUITTRACE® Voltage source tie point.

A — Cabling: Heavy lines reduce use of multiple lines.

Waveforms and voltages are taken from ground, unless otherwise noted.

Waveform voltage is peak to peak, Timebase is per division. Waveforms shown at 10 divisions.

Supply voltages maintained as seen at input.

Voltages measured with digital meter and a 1000µV RF signal, with colorbar pattern applied to antenna terminal.

Controls adjusted for normal operation.

Capacitors are 50 volts or less, 5% or greater unless noted.

Electrolytic capacitors are 50 volts or less, 20% or greater unless noted.

Resistors are less than 1W, 5% or greater unless noted.

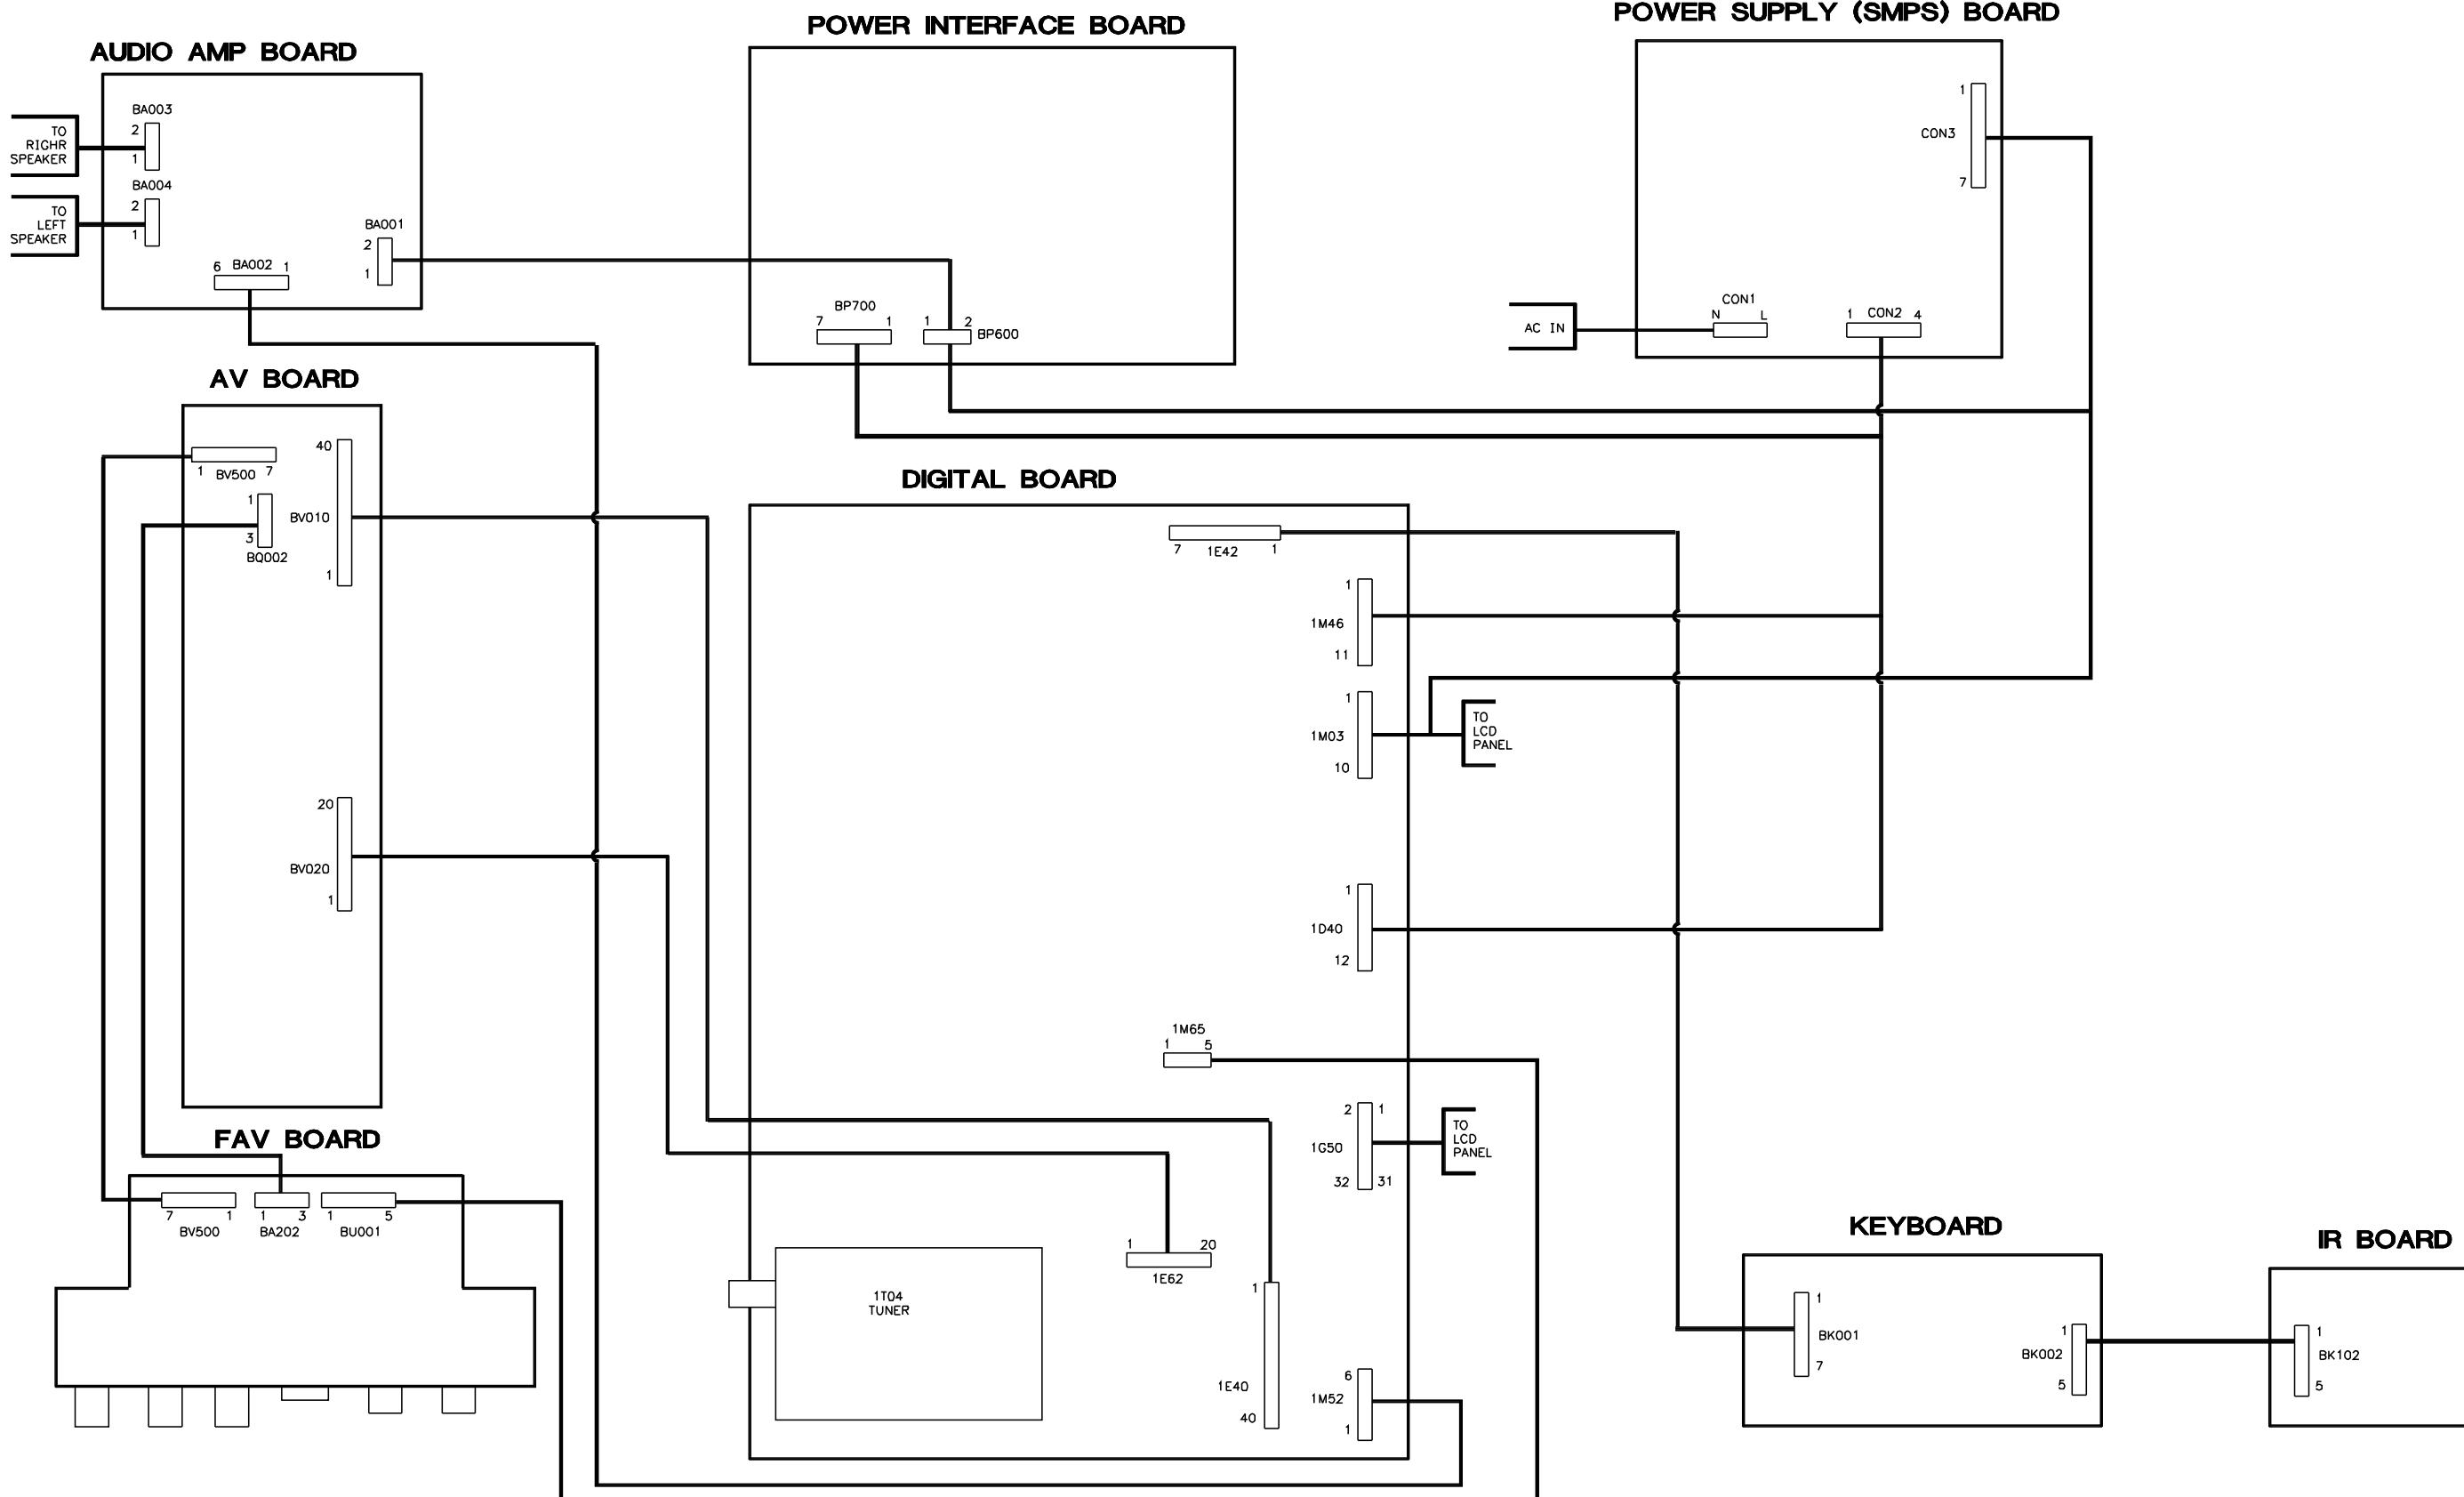

Value in () used in some versions.

Measurements with switching as shown unless noted.

Rated voltage shown on zener diodes.

RCA MODEL L32WD14 (CHASSIS IFC130L)

POWER SUPPLY TURN-ON SEQUENCE

1. Plug the AC power cord in, a 5.2V STBY voltage is generated on the Main Power Board and leaves @ CON2 pin-3. From there it goes to the Digital Board @ 1M46 pin-7, exits at 1E42 pin-5 and then to the Key Board @ BK001 pin-5.
2. When the Power On key on the remote or the key board is pressed a 5.0V level leaves 1M03 pin-7 on the Digital Board to CON3 pin-7 on the Main Power Board to turn the TV on. Now the Main Power Board generates a 12.0V @ CON3 pin-1 and a 24.0V @ CON3 pin-5 & 6.
3. The 12.0V leaves CON3 pin-1 to the Power Interface Board BP600 pin-1 & Audio Amp Board BA001 pin-1. The 12.0V passes thru the Power Interface Board @ BP700 pin-6 & 7 to the Digital Board 1M46 pins-4, 9 & 11. Also the 12.0V is used to generate 8.6V that leaves @ BP700 pin-4 to the Digital Board 1M46 pin-3, plus the 12.0V is used to generate 5.0V that leaves @ BP700 pins-1 & 2 to the Digital Board 1M46 pins-5 & 1D40 pins-4, 5 & 6.
4. The 24.0V leaves CON3 pins-5 & 6 to connectors CN1 & CN2 on the LCD Panel.

The above Turn-On Sequence should help in understanding the initial supply voltages needed to turn on the TV. Any other connector voltages can be found in the Connector Chart listings.

PARTS LIST

Item No.	Type No.	Mfr. Part No.	Notes	Item No.	Function/Rating	Mfr. Part No.	Notes
# BD1	D15XB60	-	Bridge Rectifier	C3	180uF 450V	-	-
D1	1N5406	-	-	C5	100pF 1KV	-	-
D2, 3	1N4148	-	-	C33	10uF 400V	-	-
D4	1806	-	-	# CX1	.0047	-	-
D5, 6	BYV26C	-	-	# CX3	.68	-	-
D7	1N4148	-	-	# CY1	.001	-	-
D17	UF4007	-	Ultra Fast Rectifier	# CY4	.001	-	-
D23	UF4007	-	Ultra Fast Rectifier	# F1	Fuse	-	6.3A 125V
D24, 28	1N4148	-	-	L2	Inductor	-	JLC4219
D29, 30	DIN4937	-	-	# LF1, 2	Filter	-	JLB2859
D36, 37	1N4148	-	-	LP085	125uH	-	-
DP012	RGP15G	-	-	LS1	Inductor	-	JLC5008
DP086	SR560	-	-	LS2	Inductor	-	JLC0510
DS2	MBR20150CT	-	20A, 150V Schottky Dual Diode	LS3	Inductor	-	JLB0931
DS3	FYP2010DN	-	20A, 100V Schottky Dual Diode	LS4	Inductor	-	JLB0931
DS4	MBR20150CT	-	20A, 150V Schottky Dual Diode	LS6	Inductor	-	JLC0510
DS5	FYP2010DN	-	20A, 100V Schottky Dual Diode	LS9	Inductor	-	JLC0657
DS6, 7, 8, 9	1N4148	-	-	P1	AC Power Cord	270462	Polarized
DS10, 11	1N4148	-	-	R21	1 5% 5W	-	-
DS12	MBR10100CT	-	10A, 100V Schottky Dual Diode	# R52	1M 5% 1/2W	-	-
DS15, 16, 17, 18	1N4148	-	-	THR1	NTC5D-9	-	Thermistor
DS23	1N4148	-	-	TVSZ4	P6KE200A	-	200V Transient Voltage Suppressor
IC1	TDA16888	-	Combined PFC & PWM Internal Sync	TVSZ6	P6KE18A	-	18V Transient Voltage Suppressor
# IC2, 3, 4	PC817C	-	Opto-Coupler	# T1	Transformer	-	BCK50298S
IC6	KA431AZ	-	2.5V Shunt Regulator Diode 1%	# T2	Transformer	-	BCK190284
IC8, 9	AS431M	-	Precision Adj. Shunt Regulator	T3	Transformer	-	JLC1814
IC10	KA431AZ	-	2.5V Shunt Regulator Diode 1%	Cable	274013	LVDS	-
IC11	LM393	-	Dual OP-AMP	Panel	-	LCD, CMO V320B1	-
IC12	LD7550B	-	Low Current Start-Up PWM CNTRL	PC Board	272066	Audio Amp	-
IC17	LM393	-	Dual OP-AMP	PC Board	274037	AV	-
IP002	LF90DBT	-	Very Low Voltage Drop 9.0V Regulator	PC Board	272064	Digital	-
IP085	L4973D5	-	5.1V Step-Down Switch Regulator	PC Board	274038	FAV	-
Q1	2SB1132	-	-	PC Board	274039	IR	-
Q2	13N50C	-	MOS-FET	PC Board	274040	Key	-
Q3	2SD1664	-	-	PC Board	272062	Power Supply (SMPS), JSK 3220-007D	-
# Q4	13N50C	-	MOS-FET	PC Board	274041	Power Interface	-
Q5	2SB1132	-	-	Transmitter	272068	Remote R301C1	-
Q6	RF3205	-	MOS-FET				
Q7	13N50C	-	MOS-FET				
Q8	2SD1664	-	-				
Q9	2SB1132	-	-				
# Q10	13N50C	-	MOS-FET				
Q11	2SB1132	-	-				
Q12	-	-	MOS-FET				
# Q13	8N60C	-	MOS-FET				
Q14	2SB1132	-	-				
QS1, 2	BT3906	-	-				
QS3	BT3904	-	-				
Z1	6.8V 1/2W	-	-				
Z2	15V 1/2W	-	-				
Z3	27V 1/2W	-	-				
# ZNR1	PVR07D 470K	-	-				
ZS2	16V 1/2W	-	-				
ZS3	27V 1/2W	-	-				

For SAFETY use only equivalent replacement parts.
Use Lead Free Solder

Important Parts Information

- Parts not listed in the parts list are commonly available at your local electronics parts retailer.
- The parts listed here are those not usually available from a well-stocked supply cabinet or bin.
- On the parts lists, safety items are marked with a # to remind you that only exact replacements are recommended for these items.
- When ordering parts, state the model number, part number, and description.
