This, briefly, is EIA

The Electronic Industries Association is a non-profit organization representing manufacturers of electronic products. The following are some of the objectives of EIA:

- to provide a forum within the framework of our national laws and to discuss matters affecting the legitimate interests of the industry and to implement the policies of the Association.

- to coordinate and convey the views of Association members to appropriate bodies and allied industry organizations on legislative and regulatory matters.

- to assist the Department of Defense and the Armed Services in obtaining the most advanced and reliable products and scientific developments from industry through an interchange of information and ideas.

- to stimulate public awareness of the vital role of the electronics industry in national defense, space exploration, communication, education and entertainment, and the evolution of industrial technologies.

-to advance the growth and technological progress of the industry by providing facilities and staff assistance in the development and dissemination of technical and related information, the registration of certain new products, and participation in National and International Standardization.

EIA accomplishes its objectives through an organization of Divisions, Groups and Departments. The Departments provide support to Divisions and Groups in specialty and engineering/technical areas. More than five hundred EIA member companies furnish the membership for hundreds of Committees, Panels and Working Groups which provide the industry expertise for specific efforts.

**A SUMMARY OF THE
EIA STANDARDIZATION PROGRAM**

The EIA Engineering Department operates in a comprehensive standarization program as evidenced by over 600 standards and publications currently available through EIA. These documents have been prepared and revised by more than 5,000 industry and government representatives who participate on the Engineering Department's 275 Committees.

EIA standards development activity is conducted through Panels, Committees and Working Groups made up of interested persons from EIA member and non-member companies, government, the academic community, and others. Following Committee and public review and comment, and review by the Engineering Department Executive Committee, the document is published as an offical EIA Standard and made available through sale by the Association's Standards Sales Office.

Many EIA Standards become American National Standards through ANSI approval, and many form the basis of U.S. positions in international standards development in the IEC and ISO.

EIA has developed and issued Standard EIA-476-A on Source and Date Code Marking. This Standard outlines requirements for source and date code marking on electronic components and describes the assignment of component manufacturer identification numbers and their sequence on the component to be marked, along with the lot date code.

Other EIA Standards and Publications are listed in a Catalog of EIA and JEDEC Standards and Engineering Publications which are available upon request to the EIA Engineering Department, 1722 Eye Street, N.W., Suite 300, Washington, D.C. 20006. (202) 457-4966.

EIA SOURCE CODE AND DATE BOOK

1. What is the EIA Source Code ?

It is a numeric symbol, assigned and registered by EIA Headquarters, which may be stamped or marked on any or all products to identify the production source or the vendor assuming product responsibility.

The EIA code, in addition, provides for adding numerals to the source code symbol to identify the year and week of production.

2. How does the date code work ?

In addition to a source code, it may be desired to identify the date of production. This can be done by adding, following a hyphen (-), the last two digits of the production year plus the number of the week of that year.

A hypothetical example of the application of the EIA date code to the source code follows: Say a company is assigned the source code symbol 113. To this is added two digits for the year - such as "89" for the current year, or "89" for 1989 - and another two digits for the week of the year. The combined source and date codes would be, in this case:

113-8910

which would represent the company's number "113" plus "89" for 1989, the production year, and "10" for the week of March 6-12, the production week. For convenience in identifying the week, date code tables in the back of this booklet give the number of each week in both 1989 and 1990.

If a component manufacturer is unable to use the four-digit date code, an alternate three-digit code may be used by taking only the last digit of the year. The example above would then become:

113-910

3. To whom is the EIA service available ?

To all manufacturers of radio-television and electronic equipment or components. This service is extended to all EIA members without charge. For non-members an annual registration fee of \$30.00 is charged.
