

CABINET-REAR VIEW

DISASSEMBLY INSTRUCTIONS

<p>CHASSIS REMOVAL</p> <p>Remove six screws holding cabinet back. Release AC cord and remove cabinet back. Disconnect HV anode, CRT socket, deflection yoke connector, degaussing coil connector, speaker connector, ground leads, and all required cabling. Release two latches holding main board in cabinet frame. Slide main board out of frame and cabinet.</p>	<p>CRT REMOVAL</p> <p>Follow "Chassis Removal" procedure and lay set facedown on a soft protective surface. Loosen and remove CRT neck assemblies. Remove four screws holding CRT to cabinet front and lift CRT out of cabinet. <u>Do not</u> lift CRT by the neck.</p>
---	--

SERVICING IN THE FIELD

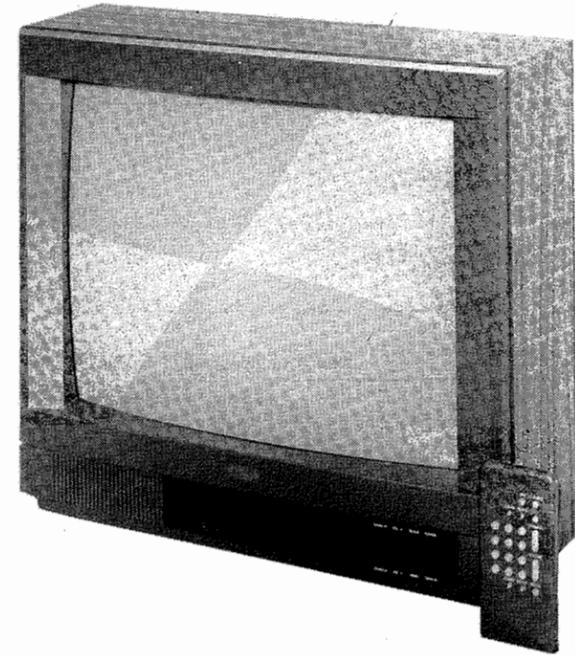

<p>CRT IMPLOSION PROTECTION AND CLEANING</p> <p>Implosion protection is an integral part of the picture tube, cleaning accomplished without CRT removal.</p>	<p>CHANNEL TUNING</p> <p>Channel Up and Down buttons are provided for channel scanning with ten numbered buttons (on remote transmitter) provided for one or two digit entry direct access channel selection. Fine tuning is automatic.</p>
<p>FUSE DEVICES</p> <p>A 1-amp fuse is used for low-voltage power-supply protection. (See photo, Main Board - Top View.)</p> <p>A 4-amp is used for AC line protection. (See photo, Main Board - Top View.)</p>	<p>HIGH VOLTAGE</p> <p>For high voltage procedure, refer to Miscellaneous Adjustments.</p>
<p>VHF/UHF TUNER</p> <p>See Miscellaneous Adjustments.</p>	<p>FOCUS</p> <p>The focus may be varied by a focus control. (See photo, Cabinet - Rear View.)</p>
	<p>AGC</p> <p>The RF AGC may be varied by an RF AGC control. (See photo, Main Board - Top View.)</p>

CHASSIS CTC146B/C

SET 2707 FOLDER 1

SAFETY PRECAUTIONS**SERVICE WARNING**

Service work should be performed only by qualified service technicians who are familiar with safety checks and guide lines.

1. For continued safety, no modification of any circuit should be attempted unless recommended by manufacturer.
2. Disconnect power source before replacing parts as some parts may be electrostatic sensitive.
3. Use an isolation transformer between the line cord and power receptacle, when servicing chassis.

SERVICING HIGH VOLTAGE AND PICTURE TUBE

When servicing the High Voltage circuits, extreme caution should be used.

1. Discharge static High Voltage by connecting a 10 kohms resistor in series with a test lead between chassis and anode lead of picture tube.
2. Wear shatter-proof eye protection (goggles) when handling the picture tube in case of implosion.
3. DO NOT lift picture tube by the neck.

X-RAY RADIATION AND HIGH VOLTAGE LIMITS

Service personnel should be aware of the procedures and instructions covering x-ray radiation. The only potential source of x-ray in present day solid state receivers and monitors is the picture tube.

1. It is only when High Voltage is excessive that x-ray radiation is capable of being emitted from shell of picture tube. Be sure the High Voltage is set at specified level.
2. An accurate High Voltage meter should be available at all times. Meter calibration should be checked periodically.
3. High Voltage should be kept at rated value - NO HIGHER. Higher voltages may cause x-ray radiation or failure of other associated components. DO NOT depend on protection circuit to keep voltages at rated value.
4. Every time a chassis is serviced, High Voltage should be checked at various brightness levels to be sure it is regulating properly.
5. While troubleshooting a set with excessive High Voltage, avoid being close to picture tube. DO NOT operate longer than it is necessary to locate the cause of excessive High Voltage. Use a variable AC transformer to regulate voltage.
6. Many components, electrical and mechanical, in present chassis have safety related characteristics which are not evident with visual inspection. When these components are known, they are identified with a # on the schematic and in the parts list. When replacing these components, for SAFETY, use only an equivalent replacement part.

SAFETY CHECKS-FIRE AND SHOCK HAZARD**Cold Leakage Checks (Sets with isolated ground.)**

1. Unplug the AC cord and connect a jumper across the two prongs on the plug.
2. Turn on power switch.
3. Measure the resistance, with an Ohm meter, between the jumpered AC plug and any exposed metal cabinet parts on the set such as: antenna screw heads, control shafts, handle brackets. Exposed metal parts that have a return path should measure between 200 kohms and 5 megohm. Parts without a return path must measure infinity.

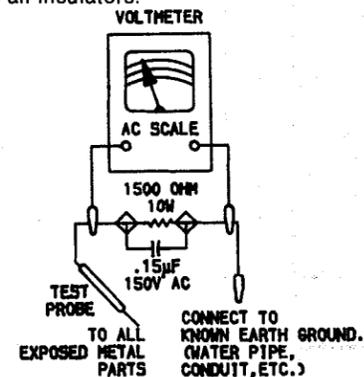

Leakage Current Hot Check

1. Plug the AC cord directly into AC outlet. DO NOT use an isolation transformer.
2. Connect a 1500 Ohm 10 watt resistor, in parallel with a .15 μ F 150V AC capacitor, between any exposed metal parts on the set and a good earth ground such as a water pipe. (See Figure below.)
3. Using an AC volt meter, with 1000 Ohms per volt or more sensitivity, measure the voltage across the resistor. Check each exposed part and measure voltage at each point.
4. Reverse the AC plug and repeat voltage measurement at each point.
5. The voltage at any point should not exceed .75 volts RMS. This corresponds to .5 milliamps AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected.

GENERAL GUIDE LINES

A final SAFETY check before returning the set to customer.

1. Check area repaired for poorly soldered or de-soldered connections. Check entire circuit board surface for solder splashes.
2. Check interboard wiring for pinched wires or wires contacting any high-wattage resistors.
3. Check that all control knobs, shields, covers, grounds and mounting hardware have been replaced. Be sure to replace all insulators.

**TROUBLESHOOTING AID**

Note: Waveforms taken with triggered scope, Keyed-Rainbow generator. Schematic voltages measured with digital meter, no signal. Controls adjusted for normal operation.

PICTURE OR SOUND

NO PIC, NO SOUND, NO RASTER: Check AC power supply and sources generated from Horizontal Output Transformer (T402). Refer to "Troubleshooting" Power Supply and Horizontal circuits.

NO PIC, NO SOUND, HAS RASTER: Check IF-AGC and source voltages from Horizontal Output Transformer (T402). Refer to "Troubleshooting" IF-AGC and Horizontal circuits.

NO PIC, HAS SOUND, NO RASTER: Check Horizontal Output Transformer (T402) sources and Video circuit. Refer to "Troubleshooting" Horizontal and Video circuits.

NO PIC, HAS SOUND, HAS RASTER: Refer to "Troubleshooting" Video circuit.

HAS PIC, NO SOUND: Refer to "Troubleshooting" Audio circuit.

OVERLOADED PICTURE: Refer to "Troubleshooting" IF-AGC circuit.

LOW OR EXCESSIVE BRIGHTNESS: Check Video and Luminance circuits. Refer to "Troubleshooting" Video circuit.

SWEEP

NO RASTER, HAS SOUND: Check HV rectifier, Part of Horizontal Output Transformer (T402). Refer to "Troubleshooting" Horizontal circuit.

NO RASTER, NO SOUND: Refer to "Troubleshooting" Horizontal circuit.

NO VERT DEFLECTION: Refer to "Troubleshooting" Vertical circuit.

POOR VERT LIN OR FOLDOVER: Refer to "Troubleshooting" Vertical circuit.

POOR HORIZ LIN OR FOLDOVER: Refer to "Troubleshooting" Horizontal circuit.

NARROW PICTURE: Refer to "Troubleshooting" Horizontal circuit.

VERT OFF FREQUENCY: Refer to "Troubleshooting" Vertical circuit.

HORIZ OFF FREQUENCY: Refer to "Troubleshooting" Horizontal circuit.

SYNC

NO VERT/HORIZ SYNC: Refer to "Troubleshooting" Sync circuit.

RASTER

YELLOW (NO BLUE): Check Chroma and Blue Output circuits. Refer to "Troubleshooting" Raster circuit.

CYAN (NO RED): Check Chroma and Red Output circuits. Refer to "Troubleshooting" Raster circuit.

MAGENTA (NO GREEN): Check Chroma and Green Output circuits. Refer to "Troubleshooting" Raster circuit.

COLOR (B/W operating normally)

NO COLOR: Refer to "Troubleshooting" Chroma circuit.

WEAK COLOR: Refer to "Troubleshooting" Chroma circuit.

NO COLOR SYNC: Refer to "Troubleshooting" Chroma circuit.

NO GREEN: Check Chroma and Green Output circuits. Refer to "Troubleshooting" Raster circuit.

NO BLUE: Check Chroma and Blue Output circuits. Refer to "Troubleshooting" Raster circuit.

NO RED: Check Chroma and Red Output circuits. Refer to "Troubleshooting" Raster circuit.

INCORRECT HUE (TINT): Refer to "Troubleshooting" Chroma circuit.

TEST EQUIPMENT

Test Equipment listed by Manufacturer illustrates typical or equivalent equipment used by SAMS' Engineers to obtain measurements and is compatible with most types used by field service technicians.

Equipment	B&K Precision Equipment No.	Sencore Equipment No.	Notes
OSCILLOSCOPE	1541A, 2120, 2125, 2160	SC61	
GENERATORS			
RGB	1249, 1260	RG67	
MULTIBURST SIGNAL	1251, 1260	VA62A

TV STEREO POWER MONITOR		SR68	
FIELD STRENGTH METER		FS73, FS74	
TRANSISTOR TESTER		TF46	
VIDEO ANALYZER		VA62A	

TV ALIGNMENT INSTRUCTIONS

Use an isolation transformer and observe power supply polarity. Maintain line voltage at 120V AC. Allow a 20-minute warm-up period for receiver and test equipment.
Suggested Alignment Tools: GC-THORSEN

PRELIMINARY INSTRUCTIONS

Set the channel selector to the highest unused channel. Set scope sweep to external. Connect scope vertical input to scope vertical input on sweep/marker generator. Connect scope external horizontal input to scope horizontal input on sweep/marker generator. Ground test equipment to TV chassis unless specified otherwise. Use only enough generator output to provide a usable indication.
Note: Response may vary slightly from that shown.

Connect a 5.5V - 6.0V Bias to TP2305.

VIDEO IF ALIGNMENT (SWEEP MARKER GENERATOR)

DIRECT PROBE FROM SWEEP/MARKER GENERATOR	SWEEP GENERATOR OUTPUT	SWEEP GENERATOR FREQUENCY	MARKER GENERATOR FREQUENCY	REMARKS
TP2307	TP2303	44MHz (10MHz Sweep)	45.75MHz	Adjust L2304 for best overall symmetry and position of marker as shown. See Figure 1.

TV ALIGNMENT INSTRUCTIONS (Continued)

VIDEO IF ALIGNMENT (BAR SWEEP GENERATOR)

BAR SWEEP GENERATOR	SCOPE INPUT	REMARKS
Antenna Terminal TP2307		Perform Video IF Adjustments per SWEEP/MARKER GENERATOR instructions. See Figure 2.

SOUND IF ALIGNMENT

Tune in a station and adjust L1201 for maximum sound. Reduce signal strength at the antenna terminals until distortion appears. Continue to reduce the signal while aligning for undistorted output by adjusting L1201.

AUTOMATIC FINE TUNING ALIGNMENT

Connect as explained in preliminary instructions unless specified otherwise. Connect a 6.0V Bias to TP2305. Set AFT R2323 fully clockwise, perform instructions below. Adjust R2323 for 1.0VDC at TP2342 after L2303 has been adjusted.

DIRECT PROBE FROM SWEEP/MARKER GENERATOR	SWEEP GENERATOR OUTPUT	SWEEP GENERATOR FREQUENCY	MARKER GENERATOR FREQUENCY	REMARKS
TP2342	TP2303	44MHz (10MHz Sweep)	45.75MHz	Adjust L2303 to place 45.75MHz marker at crossover. See Figure 3.

TROUBLESHOOTING

POWER SUPPLY

Check the AC Fuse (F4101) and DC Fuse (F4102). If Fuse F4101 is open, check Bridge Rectifier Diodes (CR4101 thru CR4104), Capacitors C4102 thru C4105 and Electrolytic C4106. If Fuse F4102 is open, check Power Regulator (Q4102) and Horizontal Output Transistor (Q4402). Apply 120V and check for 150V at the cathode of CR4103. If 150V is missing at the cathode of CR4103, check Line Filter (L4101), Power Relay (RL4101) and Resistor (R4101). If 150V is present at the cathode of CR4103, check for 140V at TP4110. If this voltage is missing, check voltages and components associated with Q4102, Q4402, and Driver Transistor (Q4103). If the proper voltage is present at TP4110, refer to the "Horizontal" section of this Troubleshooting guide. If 150V is present at the cathode of CR4103 and there is clicking sound, the set may be in shutdown. Refer to the "High Voltage Shutdown" section of this Troubleshooting guide.

HORIZONTAL

Determine if the TV is in shutdown, refer to the "High Voltage Shutdown" section of this Troubleshooting guide. If the TV is not in shutdown, inject a horizontal signal at the base of the Horizontal Output Transistor (Q4402). If horizontal deflection is now present, check the voltages, waveforms and components associated with pins 58 thru 64 of the IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001) and the Horizontal Driver Transistor (Q4401). If there is no horizontal sweep, check the voltages, waveforms and components associated with Horizontal Drive Transformer (T4401) and Q4402. Check voltages and components associated with Diodes CR4108, CR4401 and CR4405 for defects. The high voltage rectifier is part of Transformer T402 and if defective will affect the performance of the horizontal circuits. If the horizontal oscillator is off frequency, check the voltages, waveforms and components associated with pins 61, 62 and 63 of U1001. Horizontal linearity or foldover problems may be caused by Capacitors C4416 and C4417 being defective.

HIGH VOLTAGE SHUTDOWN

The high voltage is monitored by Diode CR4401, rectifying pulses from the Horizontal Output

Transformer (T402). Should the high voltage increase, the rectified voltage at the cathode of Diode CR4401 will also increase and trigger X-radiation Protect Circuit at pin 1 of U1001. To troubleshoot, remove CR4401 from the circuit and use a variac for AC power. Start at 90V AC and increase as necessary to locate and repair the defect. Return CR4401 to the circuit. NOTE: Care should be taken in defeating the high voltage shutdown circuit, as this may cause excessive X-radiation and damage to the CRT, Transformer T402 and associated components. Monitor the high voltage and troubleshoot.

Voltages Taken with TV in Shutdown

	U1001	
Pin 1		0.0V

HIGH VOLTAGE SHUTDOWN TEST

Apply 120V AC, turn set On, set all customer controls for normal operation and short XRP4001 to XRP4002. Set should lose raster and sound. The set will turn back On after 2 seconds. If the short is still present it will again go into shutdown for 2 seconds. If set does not lose raster and sound, the shutdown circuit should be repaired. To resume normal operation, remove AC power and wait 30 seconds then turn set On.

IF-AGC

Inject a video IF signal at the IF Input and check for video on the CRT. If video is present, check the tuner, tuner control and tuner AFC circuits. If there is no video on the CRT, check for a video waveform at TP2307. If video is present at TP2307, refer to the "Video" section of this Troubleshooting guide. If there is no video at TP2307, apply AGC bias to TP2305 of IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001). If video is now present at TP2305, check the voltages, waveforms and components associated with pins 18, 22 and 46 of U1001. If there is still no video at TP2307, check the voltages, waveforms and components associated with pins 18 thru 24, 42 thru 47 of U1001, IF Amp Transistor Q2301 and Video Amp Transistor Q2302. A defective AGC circuit can cause an overloaded picture, excessive snow or loss of audio and video. See the AGC Voltage Chart for AGC voltages with signal.

TROUBLESHOOTING (Continued)

AGC Voltage Chart

U1001	
Pin 18	2.2V
Pin 22	8.7V
Pin 46	8.4V

VIDEO

Inject a video signal at TP2307 and check for video on the CRT. If video is present, refer to the "IF-AGC" section of this Troubleshooting guide. If there is no video on the CRT, check for a video waveform at TP2712. If video is missing at TP2712, check the voltages, waveforms and components associated with TP2712. If video is present at TP2712, check for a video waveform at pin 13 of IF/SIF/Chroma/Vert/Horiz/AFT IC U1001. If the waveform is missing, check the voltages, waveforms and components associated with pins 8, 13 thru 17 and 51, 52, 53 of U1001. If the waveform is present at pin 13 of U1001, check the voltages, waveforms and components associated with Output Transistors (Q5001, Q5002, Q5003) and Luminance Buffer Transistor (Q2901). If the brightness is inadequate or cannot be controlled, check the voltages, waveforms and components associated with pin 15 of U1001, it should be 0.6V at MINIMUM and 2.1V at Maximum.

CHROMA

Check for a chroma waveform at pin 49 of the IF/SIF/Vert/Horiz/AFT IC (U1001). If the waveform is missing, check the components associated with pin 49. If a chroma waveform is present at pin 49, check for the proper chroma waveforms at pins 9, 10 and 11 of U1001. If these waveforms are missing, check the voltages, waveforms and components associated with pins 2 thru 12, 48 and 49 of U1001. Check the 3.58MHz oscillator at pins 4 and 6. Check the voltages and components associated with the color control at pin 17 of U3300. It should be 0.7V at MINIMUM and 7.8V at Maximum. If there is inadequate tint range, check the voltages, waveforms and components associated with the tint control at pin 18 of U3300. It should be 9.3V at MINIMUM and .1V at Maximum. If the proper chroma waveforms are present at pins 9, 10 and 11 of U1001, refer to the "Raster" section of this Troubleshooting guide.

VERTICAL

Inject a vertical deflection signal at pin 54 of the IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001). If vertical deflection is now present, check the voltages, waveforms and components associated with pins 54 and 55 of U1001. If there is still no vertical sweep, check the voltages, waveforms and components associated with the Vertical Output IC (U4501). Vertical linearity or foldover problems may be caused by vertical feedback and bias circuits, check Electrolytics C4501, C4503, C4504, C4505, C4510 and C4511 for defects.

SYNC

If there is no vertical or horizontal sync, check the voltages, waveforms and components associated with pins 57 and 58 of IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001). If there is no vertical sync, check the voltages, waveforms and components associated with pins 54 thru 58 of U1001. If there is no horizontal sync, check the voltages and components associated with pins 57 thru 62 of U1001.

RASTER

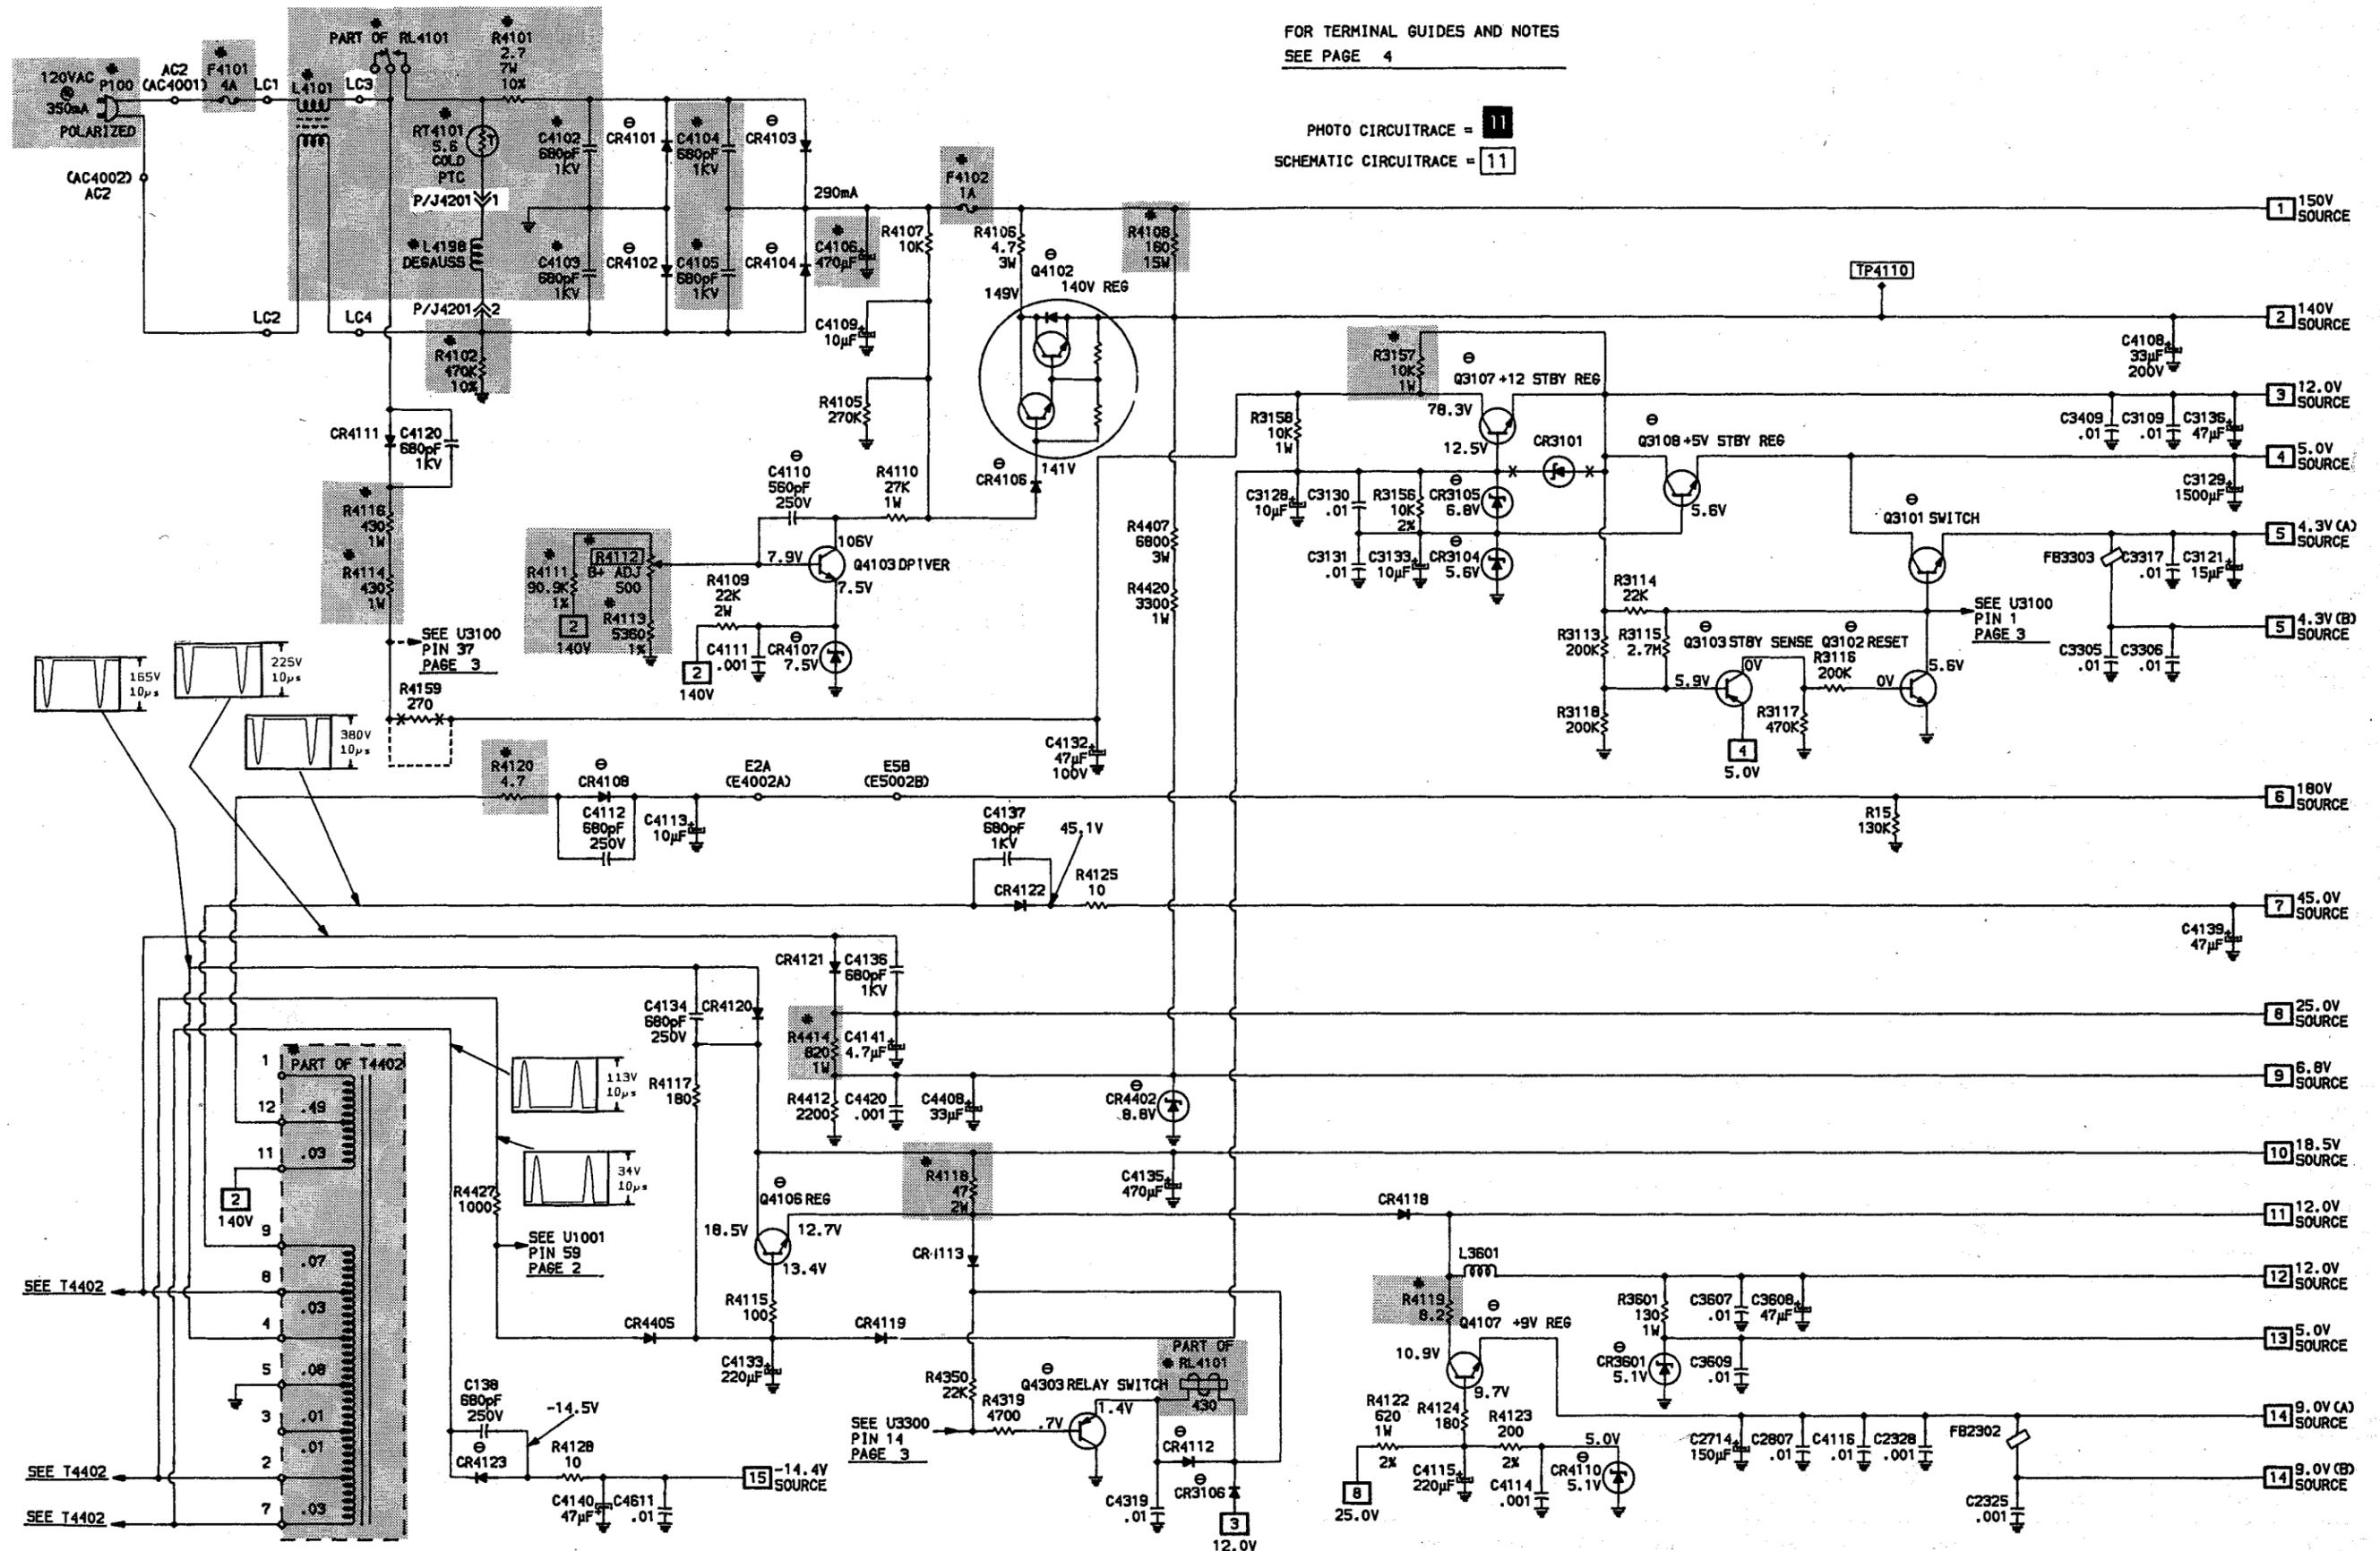

Check the CRT and CRT voltages. If there is no Red, check the voltages and components associated with pin 9 of the IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001) and Red Output Transistor (Q5001). If there is no Green, check the voltages and components associated with pin 10 of U1001 and Green Output Transistor (Q5002). If there is no Blue, check the voltages and components associated with pin 11 of U1001 and Blue Output Transistor (Q5003). If the raster has a keystone shape, check the Deflection Yoke (L501). If the raster has height or width problems, refer to the "Vertical", "Horizontal" and "Power" sections of this Troubleshooting guide.

AUDIO

Select an active TV channel and check for an audio waveform at pin 28 of the IF/SIF/Chroma/Vert/Horiz/AFT IC (U1001). If there is no audio, check the voltages, waveforms and components associated with pins 25 thru 42 of U1001. If waveform is present, check for an audio waveform at Speaker SP1. If audio is missing, check the voltages, waveforms and components associated with the Audio Amp Transistor (Q1201) and Output Transistors (Q1202, Q1203). Check the voltage at pin 30 of U1001, it should measure 1.5V at mute and 5.0V at Maximum volume.

• See parts list

* Nominal value

⊥ Ground

⊥ Chassis

▽ Common tie point

Waveforms and voltages are taken from ground, unless noted otherwise.

Waveforms: triggered scope, keyed rainbow generator.

Item numbers in rectangles appear in the alignment/adjustment instructions.

Supply voltages maintained as shown at input.

Voltages measured with digital meter, no signal.

Controls adjusted for normal operation.

Terminal identification may not be found on unit.

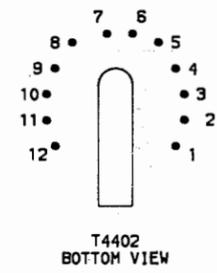

Capacitors are 50 volts or less, 5% unless noted.

Electrolytic capacitors are 50 volts or less, 20% unless noted.

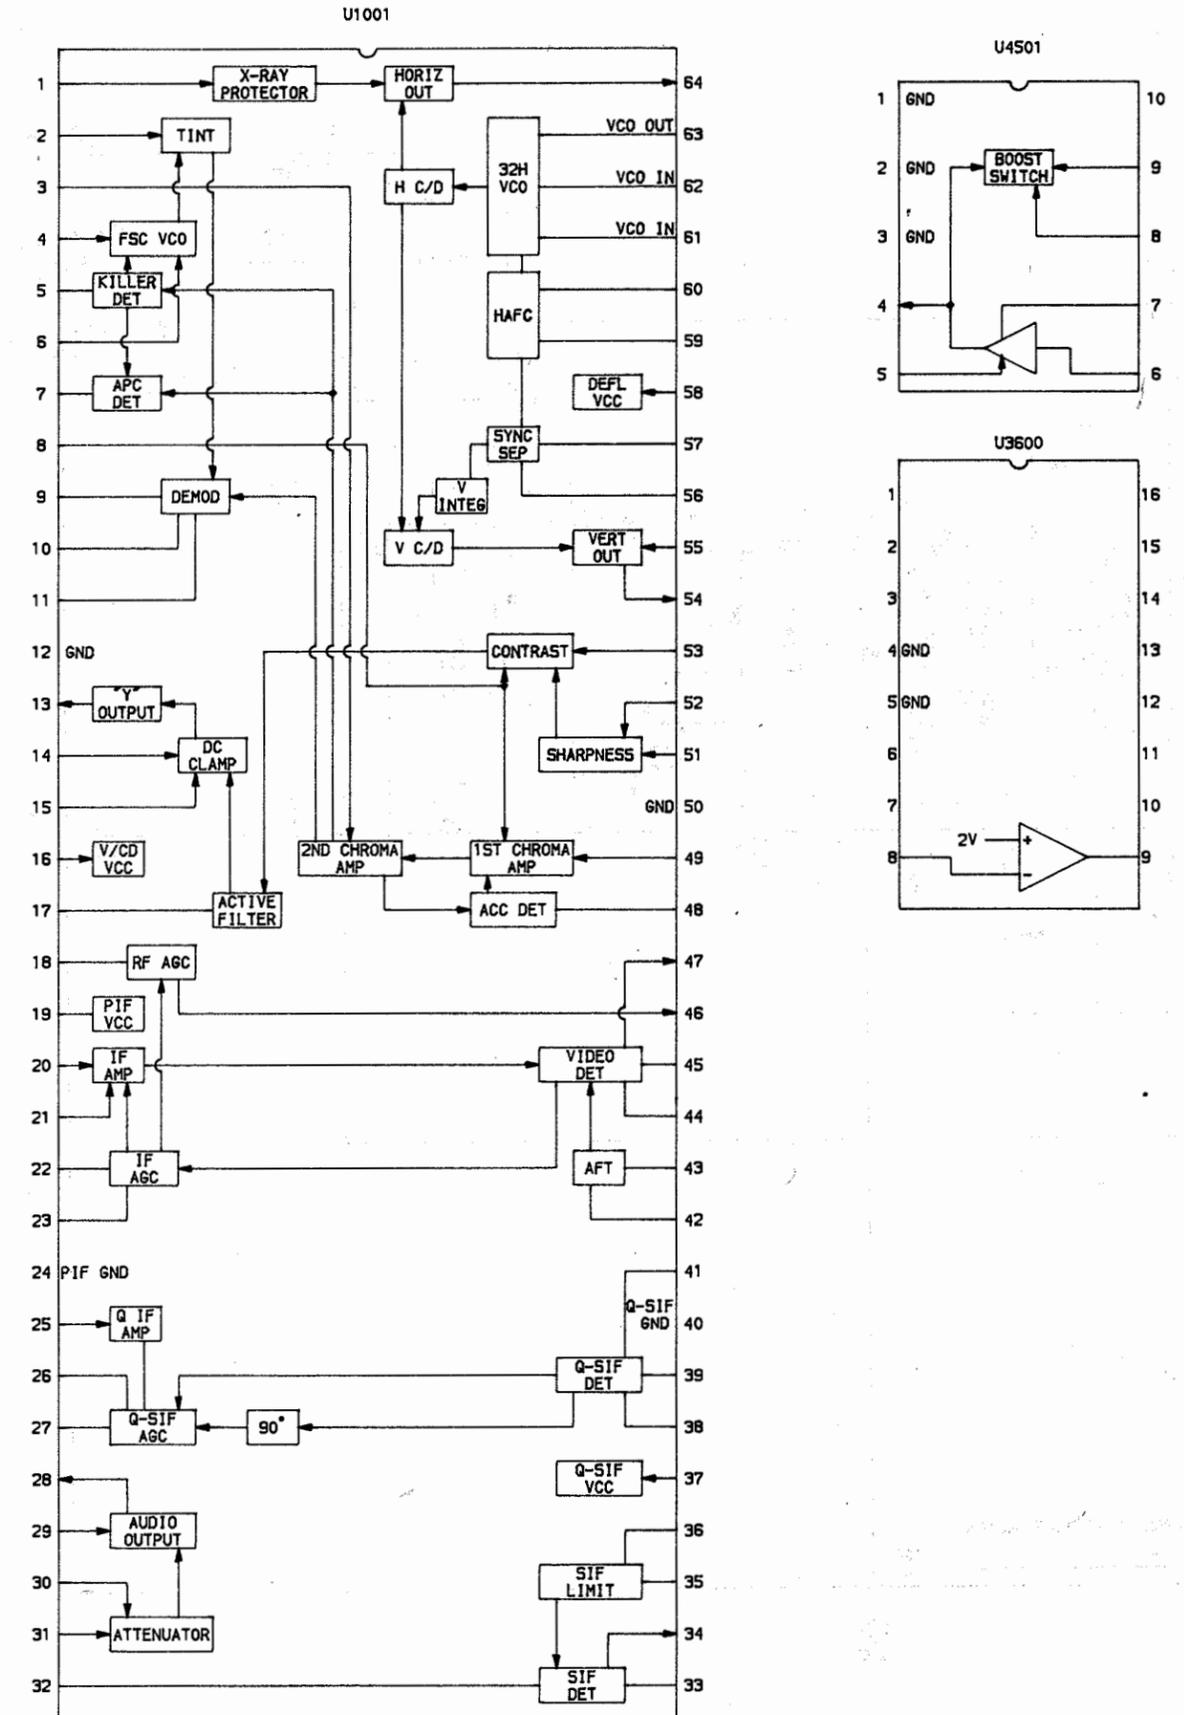

Resistors are 1/2W or less, 5% unless noted.

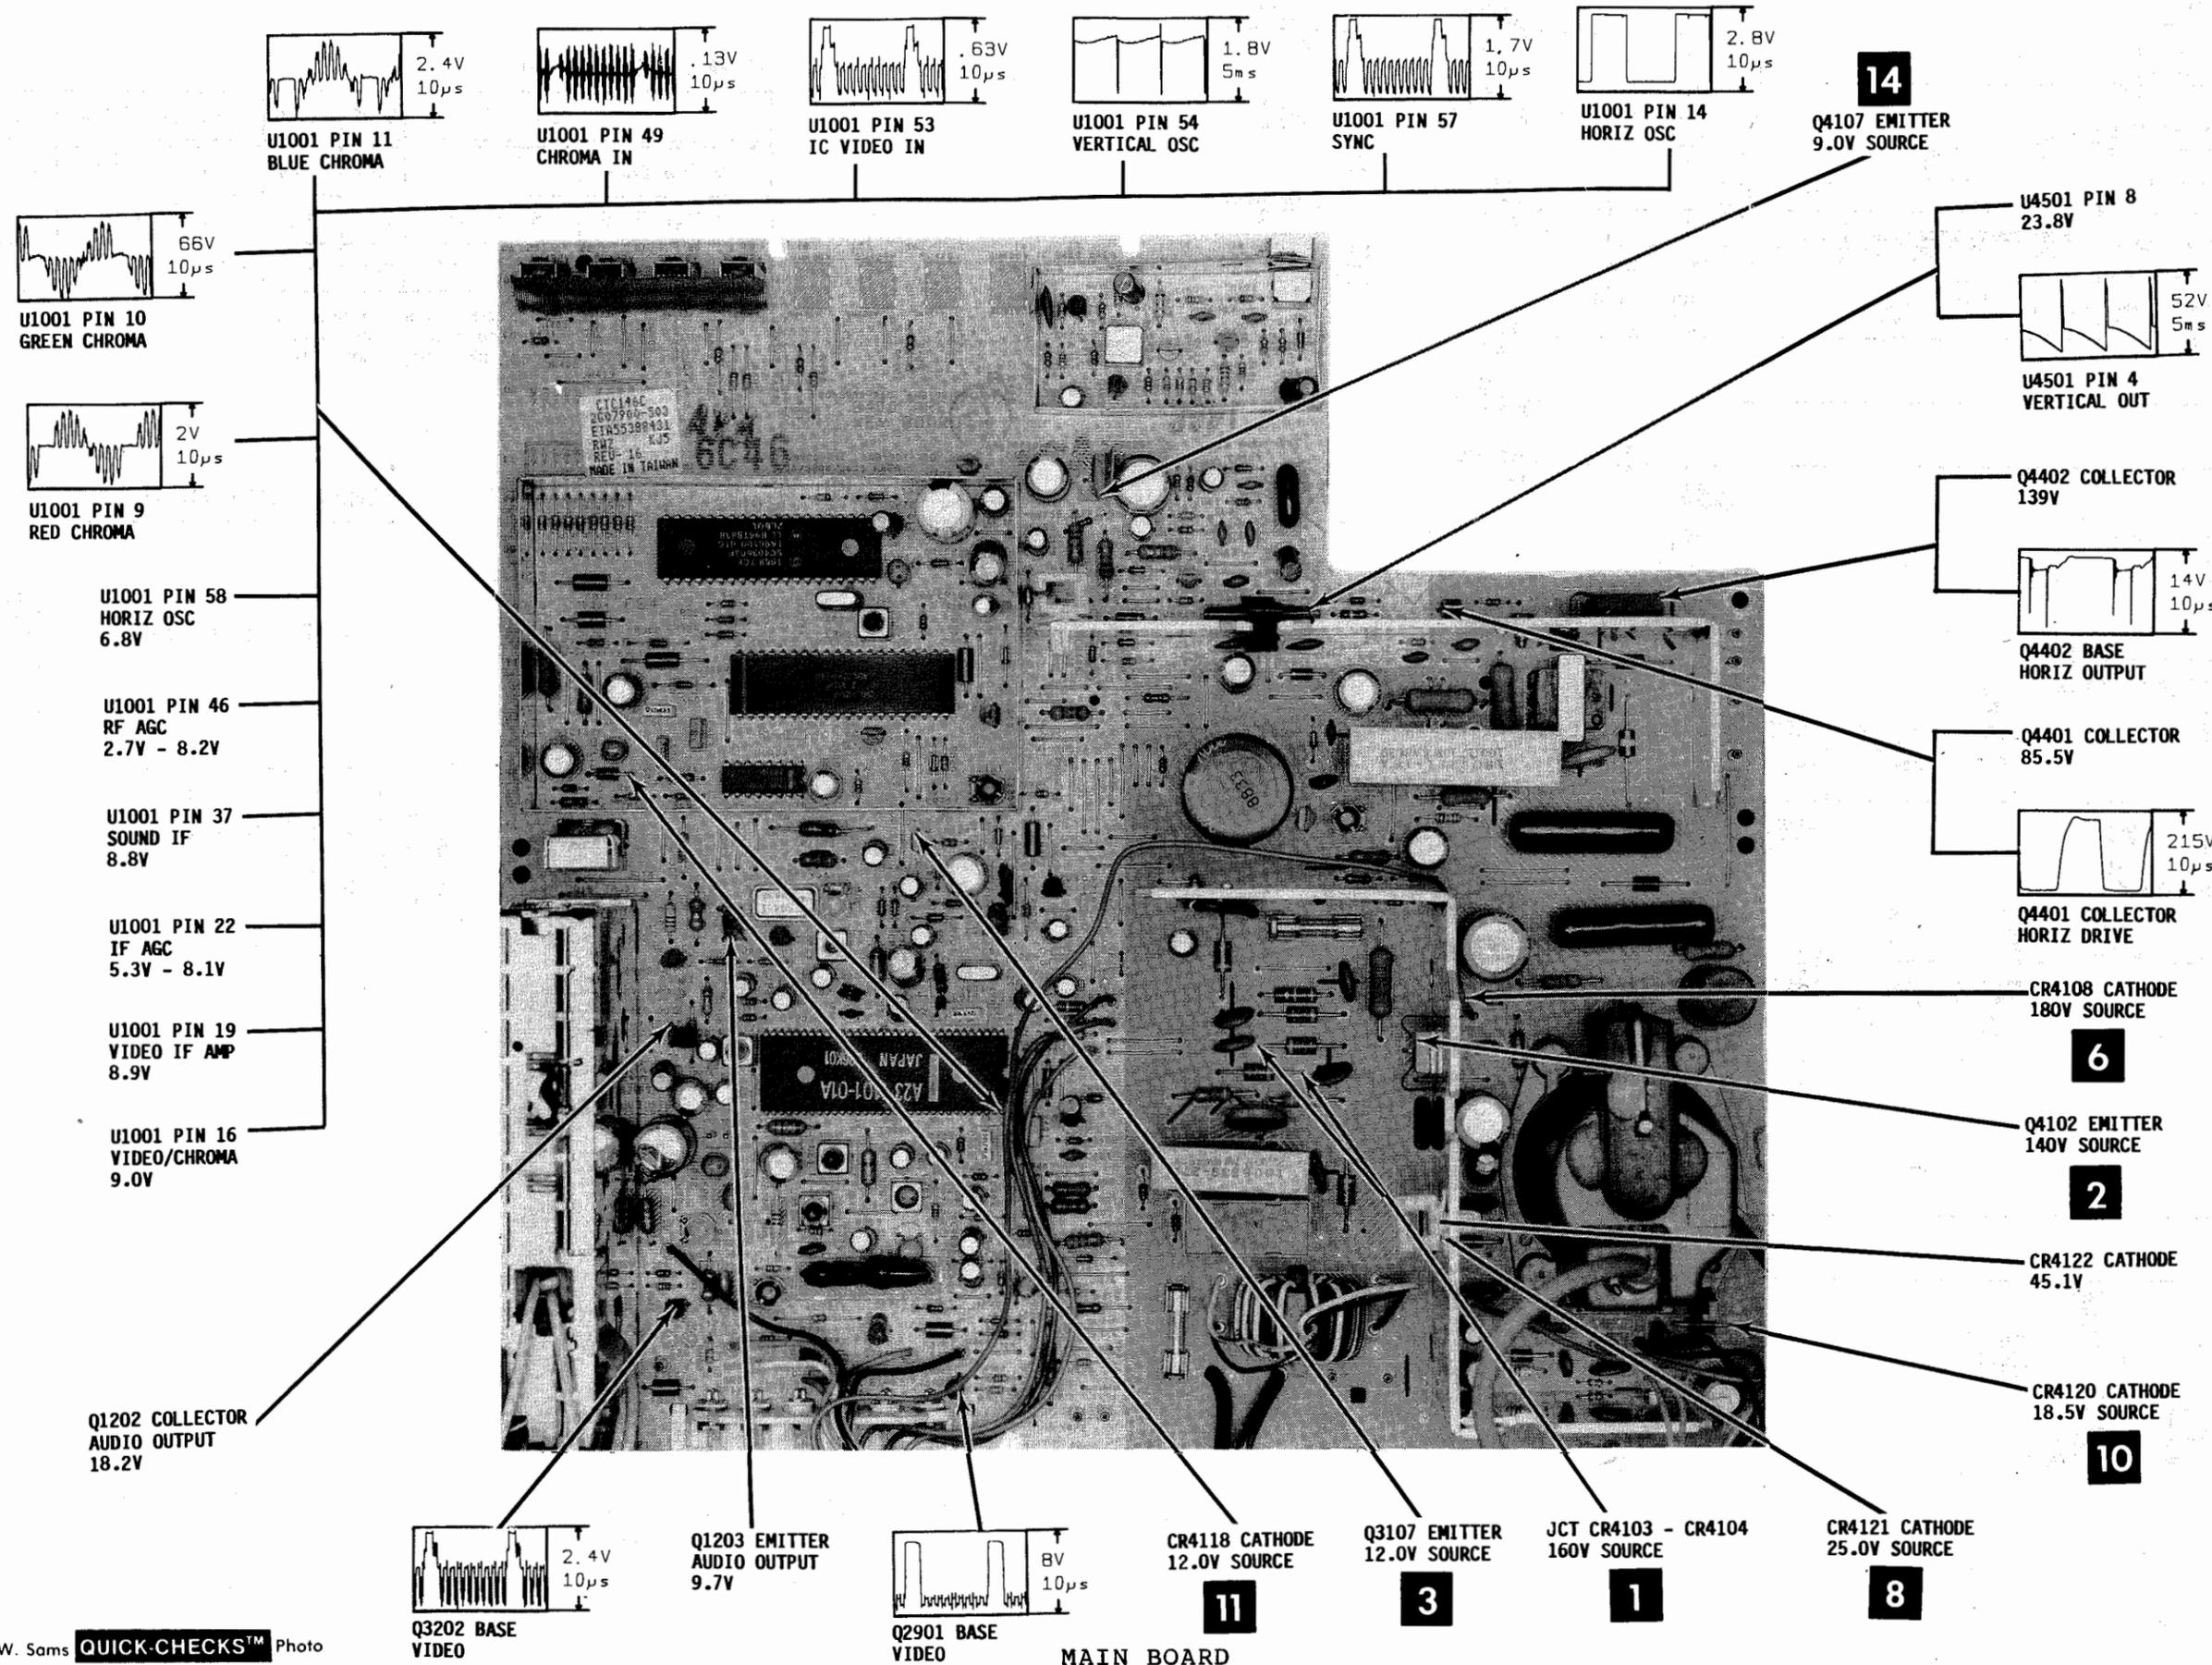

Value in () used in some versions.

Measurements with switching as shown, unless noted.

IC FUNCTIONS

MISCELLANEOUS ADJUSTMENTS

PRETUNE

Auto Program

1. Connect antenna to unit.
2. Momentarily depress the Power button.

The auto program automatically functions, when unit is turned on (power applied) for the first time. Unit scans for and stores active channels in memory. Channels stored in memory remain unless power is interrupted.

NOTE: This set employs digital customer controls, set as follows. Use VOL UP/+ Switch (SW3413) and VOL DOWN/- Switch (SW3412) to adjust all functions. Use Video Switch (SW3422) to select any of the following functions: Color, Tint, Contrast, Brightness, Sharpness, or Reset (unless otherwise indicated use Reset for all adjustments). Use SETUP Switch (SW3423) to Select Sleep Time to OFF, Auto Program, Channel Memory, Clock Set, or Cable/Air to Air.

B+ ADJUSTMENT

Tune in a picture. Connect a DC voltmeter to TP4110, low side to ground. Adjust B+ Control (R4112) for 140.0V DC.

HIGH VOLTAGE CHECK

Tune in a picture. Set Brightness, Color and Contrast Controls to MINIMUM. Connect a high voltage probe to CRT anode, high voltage should read 24.0KV and 25.2KV.

RF AGC ADJUSTMENT

Tune in a picture. Turn AGC Control (R2315) clockwise until snow is evident in picture, then adjust counterclockwise until snow disappears.

SUB CONTRAST ADJUSTMENT

Tune in a crosshatch pattern. Set Color and Brightness Controls to MINIMUM. Set Contrast Control to Midrange. Adjust Contrast Preset Control (R2716) for just visible highlights.

TINT PRESET ADJUSTMENT

Tune in a color bar pattern. Connect an oscilloscope to the red cathode of the picture tube, low side to ground. Adjust Tint Preset Control (R2335) to balance the 2nd and 4th bars.

COLOR PURITY ADJUSTMENT

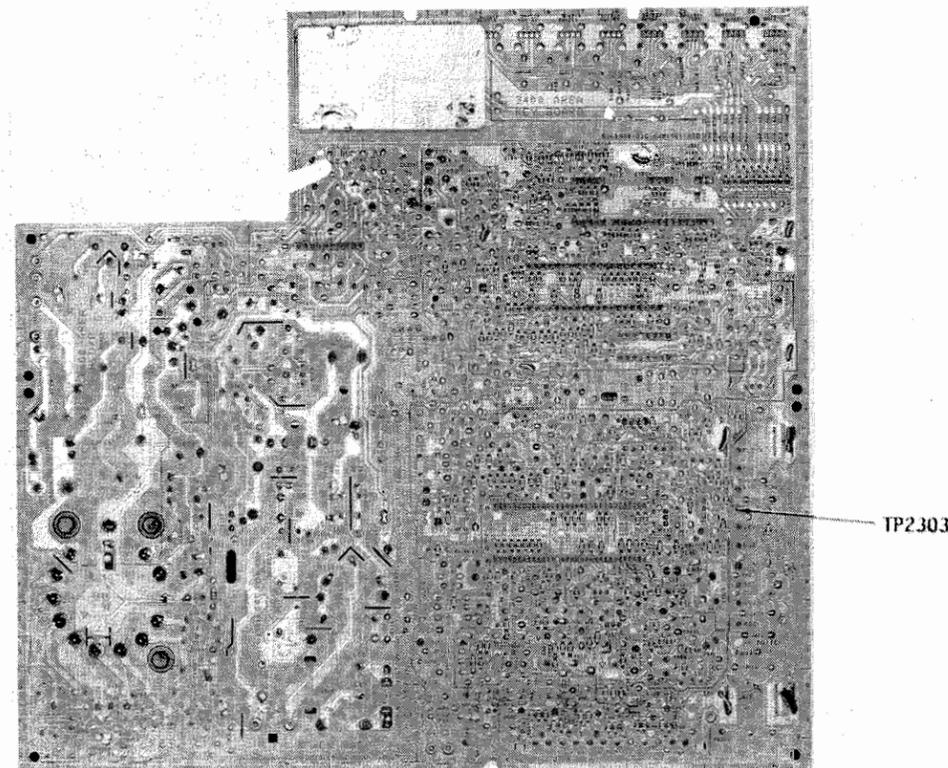

Operate the receiver for 20 minutes. If magnetic tape beam bender is used, remove and discard it, order adjustable type beam bender. Use a degaussing coil to demagnetize the CRT and mounting hardware. Set Color, and Contrast to MINIMUM. Connect a jumper to TP2712 and ground to remove video. Set Brightness Control for a visible raster. Adjust Red (R2914), and Blue (R2916) Bias Controls to MINIMUM. Adjust Green (R2915) Bias Control to obtain a green raster. Loosen the yoke clamp screw and slide the yoke backward to obtain a vertical green band. Rotate and spread the tabs of the purity magnets until the green band is centered on the screen. Move the yoke forward until a uniform green screen is obtained.

COLOR TEMPERATURE ADJUSTMENT

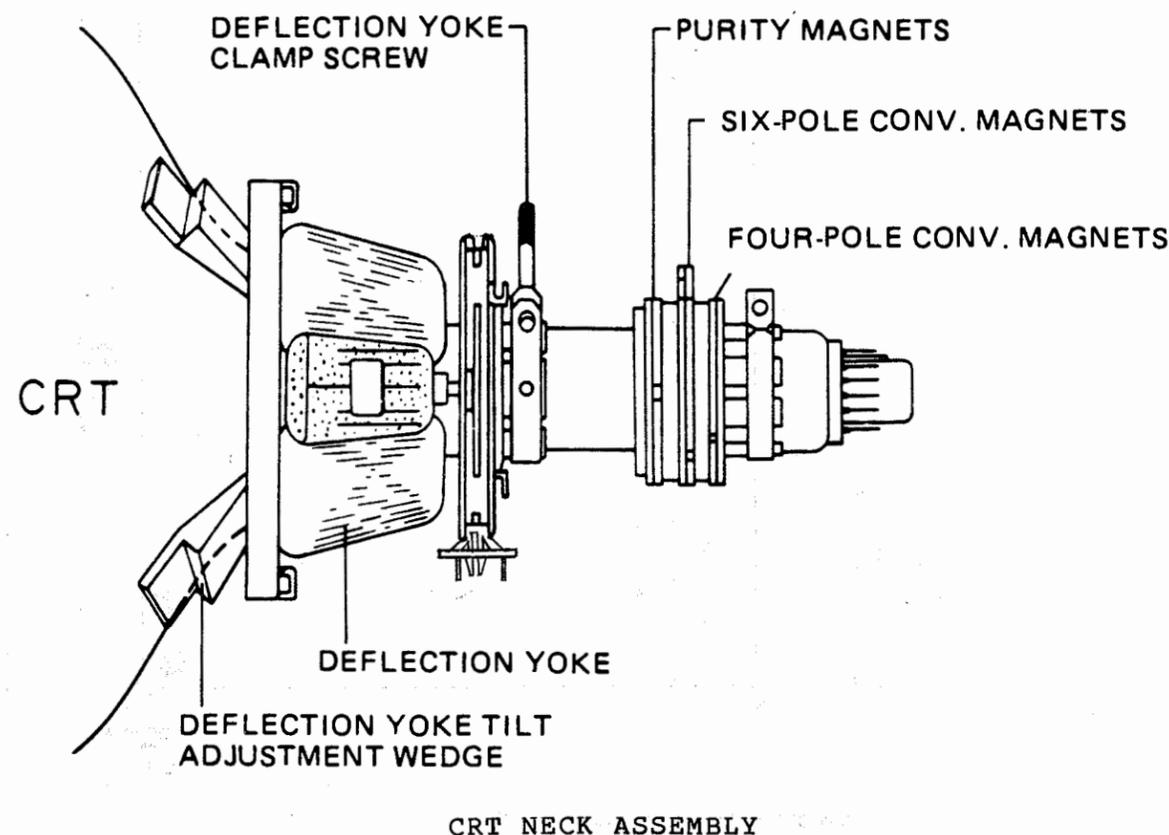

Tune in a picture. Set Color, Brightness, Contrast Controls to MINIMUM. Set Red (R2914), Green (R2915), and Blue (R2916) Bias Controls to MINIMUM. Set Blue (R2905) and Green (R2907) Drive Controls to Midrange. Set Screen Control (R4210B) to MINIMUM. To obtain a service line, connect a jumper wire between SS1 and ground. Advance Screen Control so that a horizontal line is just visible. Adjust 2 Bias Controls to obtain a dim white line. Remove jumpers. Set Brightness and Contrast Controls to Maximum. Adjust the Blue and Green Drive Controls for best black and white picture. Check tracking at low and high brightness.

CONVERGENCE ADJUSTMENTS

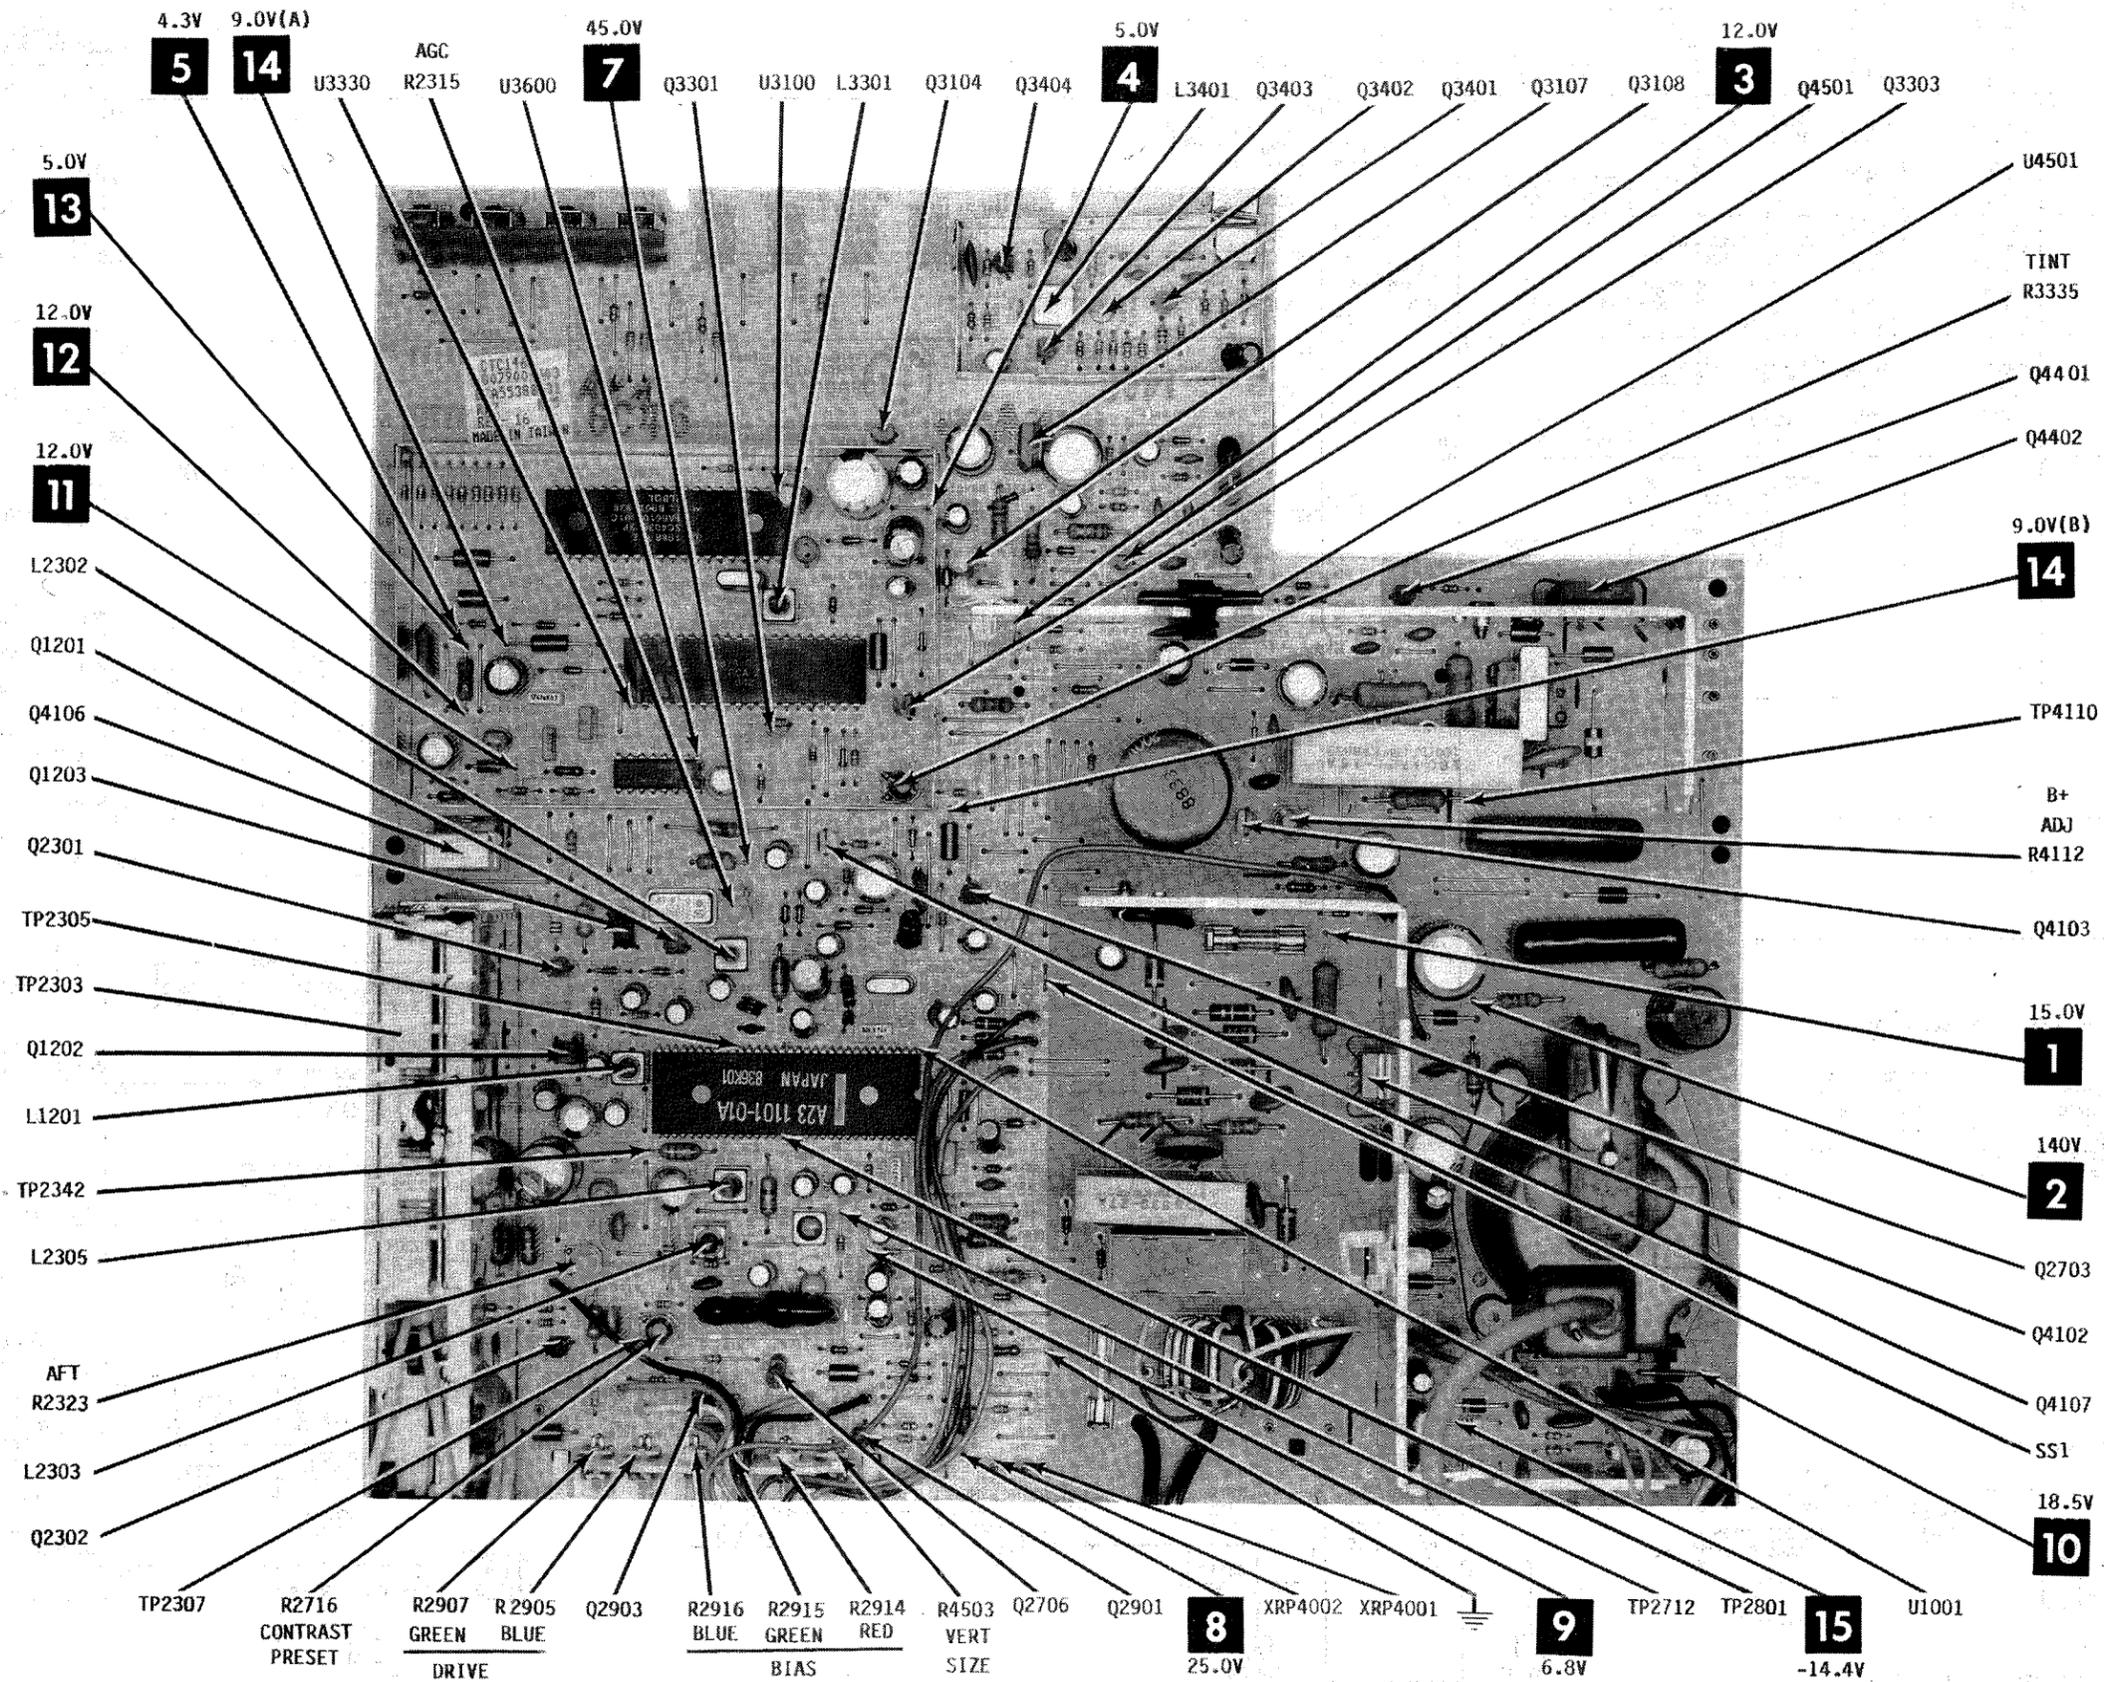

Operate the receiver for 20 minutes. Connect a color bar generator to the antenna terminals and tune in a dot pattern. Adjust the tabs of the 4-pole magnets to converge the red and blue dots at the center of the screen. Adjust the tabs of the 6-pole magnets to converge the red/blue dots over the green dots at the center of the screen. NOTE: Rotate the two tabs of each set of magnets equally and opposite to converge horizontally and rotate both tabs in the same direction to converge vertically. Four and 6 pole magnets interact, repeat adjustment until center convergence is correct. Remove the rubber wedges from the CRT. Tilt the yoke up or down to converge the vertical lines at top and bottom of screen and the horizontal lines at the right and left sides of the screen. Tilt the yoke right or left to converge horizontal lines at the top and bottom of screen and the vertical lines at the right and left sides of the screen. Apply adhesive to wedges and carefully replace on CRT. Tighten yoke clamp screw.
